"GRAPHODOMETER" IS THE NAME OF *A MACHINE JUST PATENTED BY* J. M. WAMPLER, *CIVIL AND MECHANICAL ENGINEER*, BALTIMORE, MD.

It is an AUTOMATIC SURVEYOR, which, by simple mechanism, is made to record accurately—on a strip, or endless roll of paper—a CORRECT PROFILE of any route passed over; the ANGLES OF DEFLECTION right and left; and the DISTANCE travelled, upon any required scale, or set of scales.

This machine may represent in appearance or purpose, an ordinary Buggy Wagon, with the addition of the very valuable attachment claimed above. There is a box containing the simple contrivance for recording upon the strip of paper as above mentioned. Motion is conveyed to the paper by the revolution of the hind wheel, which acts by hand and gear upon rollers over which the paper is carried. One half the strip of paper is devoted to horizontal projection, the other half to vertical projection, and the centre or division is a line of pricked distances.

The DIRECTIONS are worked by the turning of the fore axle of the Buggy in assuming the horizontal changes in the route; the PROFILE, by a weight, adapting itself to the lowest position attainable through any change in the level of the route passed over; and the DISTANCES, by points at calculated intervals, on the periphery of one of the rollers conveying the paper.

I will sell STATE RIGHTS, COUNTY RIGHTS, or INDIVIDUAL RIGHTS, for the USE, or USE and MANUFACTURE of this Machine on reasonable terms.
