however, it is feared they were, may be traced back until some clue to their source is discovered. The usual course of operation in putting counterfeit bills in circulation since the establishment of the telegraph, we are informed by the brokers, is to begin a circuit hundreds of miles away from the commercial center, thus securing several days of uninterrupted operation before the returned and the fraud is exposed. There is reason to believe that this policy has been pursued in the present instance. Nearly every bank in our city has more or less of them. The Philadelphia Bank itself has some $1,700 that it cannot trace, and a much larger amount had been received, the source of which is known. The loss to the banks of this city will be, probably, by the day's operations in these bills, about $20,000. We have no doubt the loss is great to banks more remote, and to the users of paper currency will probably amount to hundreds of thousands of dollars. A more successful counterfeit has not been foisted on the community for years. The following are descriptions: The 100s are in blue ink, dated Jan. 1, 1858, and a thorough imitation of the old plate of that denomination. Of this plate, however, we are informed, there are very few in circulation. The genuine 100s of this bank, issued in May, 1859, are printed in black ink; and, so far as has yet been discovered, there are no counterfeits of this issue in black. The 50s are also admirably executed, printed in blue ink, and dated Feb. 7, 1859. As there never was a genuine 50 by the Philadelphia Bank of that date, the public will be sufficiently protected by observing the matter of that date. There are, however, counterfeit 50s from the same plate in black ink, dated May 2, 1859. The fact that all the best judges of paper bills have been effectually deceived by these counterfeits is proof of how complete is the imitation, and how useless it will be to attempt a reliable description."
