STEAM ENGINE for SALE—One second-hand, low pressure, 150 horse-power engine and boiler, 32 inch cylinder, five-foot stroke, and all in perfect working order. Can be seen running at the works of the Howe Manufacturing Company, Greenfield, Mass. Apply to WOODRUFF & BEACH, Hartford, Conn., or to J. RUSSELL, Manufacturing Company, Greenfield, Mass.

THE HARRISON BOILER a safe Steam Boiler.—This new Steam Generator combines essential advantages IN ABSOLUTE SAFETY FROM EXPLOSION, in first cost and cost of repairs, durability, economy of fuel, facility of cleaning and transportation, not possessed by any other boiler.
It is formed of a combination of cast-iron hollow spheres, each eight inches in external diameter and three-eighths of an inch thick. These spheres are held together by wrought-iron bolts with caps at the ends. The form is the strongest known; its strength to resist internal pressure very great—unweakened as it is by punching or riveting, which lessens the strength of the best plate boiler about 40 per cent. Every boiler is tested by hydraulic pressure at 400 pounds to the square inch. IT CANNOT BE BURST UNDER ANY PRACTICABLE STEAM PRESSURE.
Under pressure which might cause rupture in ordinary boilers, every joint in this becomes a safety valve. No other steam generator possesses this property of relief under extreme pressure without injury to itself, and thus preventing disaster.
It is not affected by corrosion, which soon destroys the wrought-iron boiler. Most explosions occur from this cause. It has economy in fuel equal to the best boilers, arising from the large extent and nearness to the fire of its heating surface, as also from the waved line of the surface, which thoroughly mixing the gases, induces high combustion, and, breaking the flame, causes the heat to be more effectually absorbed than in the ordinary tubular or cylinder boiler.
It goes up steam quickly and with little fuel. It produces super heated steam without separate apparatus, and is not liable to priming or foaming. It is easily transported, and may be taken apart so that no piece need weigh more than 80 pounds. In difficult places of access, the largest boiler may be put through an opening one foot square. It is readily cleaned inside and out. Under ordinary circumstances it is kept free from permanent deposit by blowing the water entirely out, under full pressure, once a week. It requires no special skill in its management. Injured parts can be renewed with great facility, as they are uniform in shape and size. When renewed the entire boiler remains as good as new. The greater part of the boiler will never need renewal unless unfairly used.
A boiler can be increased to any extent by simply adding to its width, and, being the multiplication of a single form, its strength remains the same for all sizes. It has less weight and takes less than one-half the ground area of the ordinary cylinder boiler without being increased in hight. Any kind of fuel may be used, from the most expensive to refuse coal dust. There are over 100 of these boilers now in use, some of them in the best establishments in England and in this country. Drawings and specifications free of charge. For circulars or prices address JOSEPH HARRISON, JR., Harrison Boiler Works, Gray's Ferry Road, adjoining United States Arsenal, Philadelphia, Pa.

THE ADAMANTINE BRICK PRESS is the ONLY BRICK PRESS that uses the PERFORATORS, or EXTRACTS THE AIR FROM THE CLAY while in the process of pressing.
It is the ONLY PRESS IN USE that is capable of making pressed Brick THAT WILL NEITHER CRACK, CHECK, or WARP IN BURNING. All others that profess to do so are imitators, and we caution the public against their impositions. L. C. WOODRUFF, President, No. 175 Broadway.
