From the Financial Listening Posts of Europe

Steady Gains In Volume of French Trade

Present Advance in Imports Should Be Reflected in Larger Exports of Finished Goods Later On

Industry Is More Active

Textile Mills on Full Time Schedule; Iron Furnace Operations Increasing

Special Cable to The Tribune
Copyright, 1922, New York Tribune Inc.

PARIS, Oct. 22. — The drop in exchange closely parallels that of last year in respect to the dollar, but consolation is found in the fact that the depreciation this year has not been so great, despite the unfavorable crop conditions throughout Europe.

Statistics for September show that French imports were worth 1,890,000,000 francs, against exports of 1,741,000,000 francs, thus bringing the excess of imports to 2,301,000,000 for the last nine months, compared with an unfavorable balance of 795,000,000 in 1921. This apparently unfavorable result was due to the passing trade crisis, and the exhaustion of stocks caused a heavy buying of raw materials, which should result in larger exports after the middle of November. The important conclusion perhaps is that trade is increasing steadily in volume, with exports at 16,100,000 tons for the nine months, compared with 11,750,000 for the last corresponding period. In 1913 exports amounted to only 15,000,638 tons in the first nine months.

The internal situation continues to improve as consumption demands approach normal and industrial activity increases, since the hope of further price declines has been abandoned. Textile mills at last are on a full time schedule, while the steel industry has forty-three out of sixty-seven furnaces in operation, compared with twenty-seven last January. Other stimulants to business are found in the prospects of a great agricultural movement to make France independent of foreign assistance next year and in the elimination of English competition in coal with the rise in sterling.

The fall of the Lloyd George ministry has been favorably commented upon as a precursor of better relations with England and a sympathetic settlement of the reparations problem on the basis of deliveries in kind and guaranties of a discountable nature.

During the next five years taxable income is expected to increase considerably with the removal of business and property restrictions by the government. Rents are still kept at insufficient levels by judicial enactments, and it will not be until 1928 that a return to the common law will give proprietors a free hand in all instances. New buildings are exempt from all taxes for fifteen years in order to encourage the solution of housing difficulties.

The government maintains that although German insolvency affects for the time being the return to the gold standard it will not interfere with the eventual realization of this ideal, which will be accomplished by reductions in the note circulation through annual repayments of Bank of France advances, which total 34,000,000,000 francs and which must be brought to 23,000,000,000 francs by December 31. Thus the franc will become theoretically more valuable than a year ago, and similar enhancement of about one cent annually should occur until 1935, when the full gold backing will have been obtained.

London Stocks Go Lower as Premier Quits

Market's Tone Will Be Weak, It Is Felt, Until Form of New Government Has Been Definitely Settled

From The Tribune's European Bureau
Copyright, 1922, New York Tribune Inc.

LONDON, Oct. 22.—After displaying a continuation of the upward movement of the week before, the stock market on Thursday received a setback in the news of Lloyd George's resignation. With a general election now regarded as inevitable, it is felt that the market's tone will be weak until it is known what form the new government will take.

The natural tendency in Lombard Street is strongly Conservative, and for this reason Thursday's developments did not cause a heavy break but merely a general sagging. In general the leading stocks have not lost the gains scored earlier in the week, the 5 per cent war loan, for instance, closing at 100⅝.

The foreign exchanges during the last week have displayed erratic tendencies, the chief feature being the sharp rise in sterling in relation to all other currencies. On Wednesday and Thursday the New York rate touched 4.48, while Paris for the first time in many months went below 60 francs to the pound. Belgian and Italian currencies also weakened noticeably, while sterling scored fractional improvements over neutral moneys. German marks continued their downward course, and dropped below 15,000 to the pound on Friday.

If it were not for the domestic political situation financiers believe a first-class crisis might be worked up over reparations, but under the circumstances reparations, like the Turkish peace question, has been relegated to temporary absolute oblivion.

The prospect of an election, however, does not mean the further postponement of the departure of the American debt funding mission. The Treasury expects it will leave on October 30, as planned, with Geddes acting as plenipotentiary in case important decisions are to be made at Washington.

Berlin Fears Further Drop In the Mark

Anti-Speculation Decree Has Opposite Effect, in That Public Turns to the Buying of Foreign Securities

Order May Be Withdrawn

Lloyd George's Resignation Is a Contributory Factor in the Currency Decline

By Wireless to The Tribune
Copyright, 1922, New York Tribune Inc.

BERLIN, Oct. 22.—The week closed with the accompaniment of another terrific crash in the mark which brought it close to 5,000 to the dollar. In view of the meteoric downward flight of the mark during the last week it is really difficult to predict where it will halt once it has passed the 5,000 limit, for when it is beyond that point its downward fluctuations are likely to assume an even more rapid gait.

In financial circles it is feared that the daily decline in the mark will soon be registered not by hundreds but by thousands of points. On Saturday the mar closed at more than 4,400 to the dollar, which means that it will open Monday at close to 5,000 and will reach 6,000 to the dollar before the day is over if it maintains the same speed of decline as it showed in the closing days of the week.

What the financial world predicted with the promulgation of the government decree prohibiting speculation apparently has come true—the decree accomplished a result directly opposite to the one planned, for it in no way stopped speculation or buying of foreign values. Instead of buying dollars the public began feverishly to buy up foreign securities. It is not unlikely that the government's decree will be withdrawn, for such measures have proved valueless in other countries, particularly Austria and Russia.

In addition to this opposite effect of the government's decree, Lloyd George's resignation, combined with the new French proposals for rigid financial control in Germany and serious difficulties which have arisen in carrying out the Stinnes-Lubersac agreement and the plans for Franco-German industrial co-operation built up around it, were contributory factors in the latest unprecedented decline in the mark.

Monday, therefore, may be the crucial day for German currency. Business and industry do not show any particular outward effects of the latest development in the mark nor is the decline reflected in any growth of unemployment. How long business and industry can remain untouched by the incessant aggravation of the financial situation is the great riddle which every one in Germany is trying to solve.
