The subscriber would call the attention of dealers, and others, to this superior article. By his patent process of hammering; the saw is more thoroughly tempered than it can be by any other method. It is well known to mechanists that the surface of tempered steel is it hardest part. Where saws are tempered according to the usual method and hammered by hand, it is necessary to polish them, thereby grinding off the most serviceable part of the saw These Saws are not polished, and only require a trial to be appreciated. They have already been put to the severest test in some of the largest Saw Mills in this vicinity, and pronounced unequalled. We are now prepared to execute orders for all sizes of Mill, Pit, and Circular Saws.

THE subscriber still continues the manufacture of this unrivalled churn, at his shop near the Bridge in the village of Middlebury. It has now been thoroughly tested by many of the best dairy farmers in this region, & but one opinion has been expressed, and that is in FAVOR OF THIS CHURN AGAINST ALL OTHER contrivances for the manufacture of good Butter.

Abundant testimonials are in the hands of the Proprietor of this churn, that it possesses advantages, never before found in any other. It is valuable particularly on account of its labor-saving character, since it works and salts the butter without bringing it in contact with the heat of hands, and turns out the article in its purest & most marketable shape. All orders addressed to the subscriber will be promptly attended to, and the churn WARRANTED to give satisfaction.
