I. W. W. PLOTTERS BEING SOUGHT IN U. S. ARMY CAMPS

Indicted Men Said to Have Gone Into Service Without Claiming Exemption.

CHICAGO, Oct. 1.—Search for alleged Industrial Workers of the World named in indictments returned here last Friday was made to-day in various army cantonments, where it is learned, a number of the men sought are in national service. A careful check of the registered men is now being made by Federal authorities, who assert it will only be a matter of a short time until all of the 166 indicted men are under arrest.

Officials have given no indication as to the presence of members of the Industrial Workers in the contingents of which they fear to have gone into the service, claiming exemption from the charges made in the indictments, but in the statements of officials of the I. W. W. to-night general the registered men a feeling of uncertainty and misunderstanding.

Some of the evidence used by the Federal Grand Jury in obtaining the indictments was put in by the Federal authorities shows that it was contained principally in letters and pamphlets, thousands of which were distributed over the country. From a book sent by William D. Haywood, Secretary-Treasurer, to Duluth, Minn., to be translated into Finnish, the following was taken:

"We are going to take over the industries some day for three very good reasons. Because we need them, because we want them and because we have the power to get them.

Whether we are ready or not we must do it and we will succeed.

A letter from Andy Jurich, sent from Seattle, Wash., under date of Aug. 2, to Haywood, said:

"We have the good will of the Japanese people and we feel that they are to cooperate with us next May by tying up their ships, but we need some one here to take the place of Akiyama.

"We are going to carry the points if we have to stop every industry on the Pacific Coast. We did not declare war and we have not succeeded in the workingmen giving up his liberty and being drafted."

Another excerpt from the book sent by Haywood to Duluth said:

"In a strike contemplated by the most indispensable workers. Some of the auxiliary trades? A quart of kerosene or other greasy and malodorous matter, poured or smeared on the lever of an oven, and welcome the scabs and scabby soldiers to come and bake the bread.

"The bread will be unstable, because the stones will give the bread for at least a month the foul odor of the substance they have absorbed. Result: a useless oven."

The Haywood book suggests as a means to paralyze railroads:

"It would be well to choose those workers among the most skillful and experienced who would by a single stroke disable and render useless for some days the materials necessary for the regular performance of the service and the movement of trains."

WASHINGTON, Oct. 2.—Preparations for the I. W. W. trial at Chicago indicate it will rank with the country's most famous labor hearings—Haymarket rioters, Molly McGuires in Pennsylvania and the McNamara dynamiters.

The charges on which the indicted men will be tried include:

Prevention of plans to keep American armies in the field through interference with equipment, transportation facilities and contraction work at cantonments.

Prevention of the manufacture of guns, ammunition and other munitions.

Prevention of the harvesting of grain crops throughout the country.

Attempts to stop enforcement of the Conscription Law.

Agitation of strikes.

Agitation for the destruction of

Girls! Use Lemon Juice! Make This Beauty Cream

The lemon juice massage indulged in once or twice each day means a little time and trouble, girls, but what of the splendid results? A skin bleached beautifully white, a complexion with the bloom of a peach, a softening of those lines of care; in fact, a skin eloquent of nature's purity and hands white, soft and full of charm.

What girl or woman hasn't heard of lemon juice to remove tan, freckles and sallowness; to bleach the skin and to bring out the roses, the freshness and the hidden beauty? But lemon juice alone is acid, therefore irritating, and should be mixed with orchard white this way: Strain through a fine cloth the juice of two fresh lemons into a bottle containing about three ounces of orchard white, then shake well and you have a whole quarter pint of skin and complexion lotion at about the cost one usually pays for a small jar of ordinary cold cream. Be sure to strain the lemon juice so no pulp gets into the bottle, then this lotion will remain pure and fresh for months. When massaged daily into the face, neck, arms and hands it should naturally help to whiten, clear, smoothen and beautify the skin.

Any druggists or toilet counter will supply three ounces of orchard white for a few cents and the grocer the lemons.—Advt.

The Dairy Cows Must Not Be Slaughtered!

THE 500,000 dairy cows on our farms are in danger, and so your milk supply is in danger. Dairy cows bring a high price for meat and they must be sold for meat if they can't be made to pay as milkers.

The College of Agriculture of the state made investigations in thirty-eight counties and found that the great herd is decreasing at the rate of 71,000 cows a year. Meanwhile, there were 26% less female calves raised.

The reasons given for the slaughter was scarcity of labor, high prices of feed and low prices for milk.

To Save the Dairy Herds, You Must Use Milk Freely

Unless more milk is used—unless you understand that the milk producers on the farms are selling their milk as low as possible, then the dairy industry of the East will go the way of the sheep industry, which has been practically destroyed because it was not profitable.

During October we dairymen will receive for Grade B milk testing 3.6% butter fat, 7.18 cents a quart. It will cost us over 6.97 cents a quart to produce this milk. Our profit, then, will be about 2/10 of a cent per quart.

Some people think that cows live on grass and forage. As a matter of fact we have to buy a large part of the feed for our cows. In the last twelve months, feed has gone up over 60%, just the same as your flour and your meat have gone up, and for the same reason. Farm labor has gone up over 33% and other expenses have gone up 50%.

Children Simply Must Have Milk

Their growth, their very lives depend upon it. Every child should consume in one way or another at least a quart of milk a day.

Grown ups consume too little milk. Business men should drink more milk at lunch and cut down on meat and egg dishes.

Housewives should save money by cutting down on the purchases of meat and eggs and put more milk on the table, either to be drunk or in puddings, soups, breads, cakes, custards, etc.

Mr. Hoover Says, "Do Not Waste Milk"

It should be bought freely and every bit of it should be consumed. The cream and butter furnishes energy, and skimmed milk and buttermilk are real foods, because they build up the body and safeguard health.

We, the dairymen of the state, pledge ourselves to keep down our selling prices as low as possible month by month. Our books, our cost of production and our selling prices are always open to the public.

Each of the 42,000 members of the Dairymen's League are spending a few cents a day for this advertising, to lay before the consumers the vital facts about milk production; the cost of its production and the value of milk as a food.

1917 COTTON CROP SHORT; PRICE JUMPS $5 A BALE

Year's Yield Estimated at 12,047,000 Bales as Against 18,105,000 Bales in 1916.

WASHINGTON, Oct. 2.—The 1917 cotton crop was forecast at 12,047,000 equivalent 500-pound bales to-day by the Department of Agriculture, basing its estimate on the condition of the crop Sept. 25, which was 65.4 per cent. of a normal.

The report shows that 2,695,351 bales were ginned from the growth of 1917 up to Sept. 25, compared with 4,901,989 for 1916, and 1,903,529 for 1915.

The world's production of commercial cotton, exclusive of linters, grown in 1916, was approximately 19,965,000 bales of 500 pounds net, while the consumption of cotton, exclusive of linters in the United States for the year ending July 31, 1916, was approximately 20,105,000 bales of 500 pounds net.

Deterioration during September over almost the entire cotton belt caused a large loss in the prospective production. A decline of 7.4 points in cotton's condition during the month was caused principally by boll worms and weevils.

Cotton rose approximately $5 a bale in the market here to-day as a result of the Government's crop report, indicating a yield of only 12,047,000 bales. Active and general buying sent December contracts up to $24.87, or 104 points above last night's closing figures.
