STEEL BUYERS STILL AWAIT FREIGHT CUTS

Production of Mills Not Materially Decreased in Seasonal Lull.

Special Despatch to THE NEW YORK HERALD.

PITTSBURGH, Nov. 19.—Although the finished steel market has been regarded for the last four or five weeks as quieter than formerly, there is no evidence that production has materially decreased up to date. October showed a rate of ingot production of 44 per cent., and the rate now is close to that figure. The appearance of quietness in the market is perhaps exaggerated by comparison with the steady increase in activity that had been seen for three months.

A slight tapering off in market activity is not unseasonal at this time but rather reflects the year end dulness always to be observed unless the trade has acquired such momentum that the seasonal factor is obscured.

No unfavorable change has occurred in fundamental conditions making for steel demand. Underlying conditions are neither better nor worse than thirty days ago. Some observers hold that the steel market is not unfavorably affected by the delay in reducing freight rates. If so, the responsibility really rests upon those who had previously reached the conclusion, upon insufficient premises, that large reductions were about to occur. Steel prices in general exhibit a slight sagging tendency rather than an advancing one, but there are no clear cut declines. In most lines there is quite a variety of prices depending on the desirability of the order and other circumstances.

"The pig iron market, dull for many weeks, may be described as stagnant. There is virtually no demand, at least of any consequence. Occasional purchases of foundry iron are recorded, but only in small lots of carloads to 100 tons. Some foundry interests are operating fairly well, but they are covered for deliveries to the end of the year. By far the greater part of the iron being shipped by foundry iron furnaces is against old sales. In Bessemer and basic there is hardly any demand, and the market is quotable as follows: Bessemer, $20; basic, $19; foundry, $21. These prices are f. o. b. Valley furnaces, freight to Pittsburgh being $1.96.

The recent overproduction of furnace coke, reflected in the reduction in merchant output, has left an impress upon prices, which in the absence of any strong absorbing power have yielded a trifle, so that $3.25, formerly the minimum for spot furnace coke, is now the maximum that any seller really hopes to obtain. The accumulation of furnace coke on track is not large in point of tonnage, but it is large in proportion to current demand for spot lots, since there is hardly any demand that runs into tonnage.

There is no interest in contract furnace coke. The time to the end of the year is too short to constitute a real contract period, while conditions in the iron trade are so uncertain that furnaces either active or potentially active are indisposed to take up the subject of the first quarter or first half of the new year.

Foundry coke has experienced a decline of 25 cents, after having stayed at a virtually fixed range for a long time. The coke market stands quotable as follows: Spot furnace, $3.10@3.25; contract furnace, nominal, $3.35@$3.50; spot foundry, $4@4.50.

Again has the sheet market been thrown wide open with no stability to the 3.25c. price on black sheets and 4.25c. on galvanized. Concessions of $5 a ton below that level are offered by some producers, while concessions hereabout below 3c. on black and 4c. on galvanized amount to only $2 a ton. However, in other localities a few makers are apparently quoting 2.75c. on black sheets and 3.75c. on galvanized, with 2.25c. on blue annealed.
