FAVORABLE TRADE BALANCE DECLINING

Excess of U. S. Exports Over Imports Shows Big Slump in Six Months.

Special Dispatch to THE NEW YORK HERALD.
New York Herald Bureau,
Washington, D. C., Sept. 15.

A steady decline in America's trade balance against the world was revealed to-day by the Commerce Department. Analysis of the foreign trade of the United States for the fiscal year 1922 revealed a decided lessening in the gap between exports and imports. Exports have shown a progressive decline since August. Shipments coming into American ports in the same months have been steadily climbing in volume.

The favorable trade balance for the last six months of the fiscal year averaged only $66,000,000 a month, as compared with $127,000,000 a month for the first six months. Manufactures for consumption led all exports. Crude materials were second in volume.

The trend of all groups of imports was toward increased values in the last half of the fiscal year. Crude materials, which constituted the most valuable import group for several years, have declined more sharply since the peak year of 1919 than any other group.

Iron and steel imports on a heavy scale were reported by the Department. July imports of this class recorded another large gain over preceding months, aggregating 72,426 tons, an increase over June of 85 per cent. The iron and steel export movement for the month was 159,438 tons.

The unprecedented decrease in the value of the German mark during August, and its effect on trade and industry in Germany, was cited by the Department as one of the leading adverse developments in the international economic situation.

Germany's cost of living figure rose 41 per cent. in August, causing many aggravating wage controversies and strikes. Production in Germany continues high. It is predicted, however, that a capital shortage and the inability of domestic purchasing power to respond to new price levels will make it impossible for Germany to buy foreign raw materials on the present scale. This is expected to bring a decrease in both production and employment. All German industries continue to run on an increasingly speculative basis.

Trade conditions in France show distinct improvement, reports indicated. The French iron and steel industry is in a better position, most plants having orders many months ahead. French unemployment has ceased to be a problem.

CANADA HAS FAVORABLE TRADE BALANCE IN YEAR

OTTAWA, Sept. 15.—The outstanding feature of Canadian trade statistics for the fiscal year, according to the annual report of the Department of Trade and Commerce made public to-day, was conversion of an adverse trade balance in 1921 to a favorable balance in 1922.

During the year ended March 31, 1922, the balance showed $6,122,677 in Canada's favor as contrasted with an unfavorable balance for the previous fiscal year of $29,730,763 and for the pre-war year 1914 of $163,756,774.

FINANCIAL NEWS AND COMMENT

Lack of Interesting Features as Stock Market Still Is Strong and Active.

Notwithstanding its activity and strength, the stock market yesterday was quite devoid of interesting features and with one or two exceptions the movements which occured in individual stocks were without particular significance. News developments during the day, so far as they were apt to influence the course of security prices, were few but there was the customary crop of rumors concerning various issues, several of which bore fruit in the shape of buyers.

The foreign exchange market, the center of interest in the last week, was just as lacking in interest as the stock market. Germany's flat refusal to accede to the terms of the Belgian ultimatum in which demand was made for the deposit of 100,000,000 gold marks as security for notes for six months' reparations payments was completely ignored.

It is felt pretty generally that a new conference of the Allied Governmental heads will be held in the near future as a result of the latest development in the reparations situation, and that some satisfactory solution of the present knotty problem, either through a compromise acceptable to both Belgium and Germany, or otherwise, will be found.

Conspicuous strength was shown in the bond market, with an especially heavy demand for high grade railroad issues, many of which went into new high ground. The continued inquiry for bonds at prices higher, in many cases, than they have been in several years, is difficult to reconcile with the theory held in some quarters that rapid expansion of business now in progress and in prospect will prove a drain on surplus funds sufficient to warrant a stiffer rate on loans which, in turn, would in all likelihood be reflected in a gradual scaling down of bond values.

In the stock list, too, there was a persistent inquiry for good railroad securities. New York Central got up to par, Pennsylvania to 49¾, while a number of the others of the same class advanced substantially. Buying of the rails at this time can scarcely be attributed to any except those who desired to recognize the extraordinarily promising outlook for the carriers with definite commitments, but who refrained from taking the step until the outcome of the shopmen's strike was pretty definitely indicated.

Certainly nothing more bright in the way of prospects could be sought than those in the railroad outlook at this time. With all efforts bent to make record movements of coal, with a tremendous grain crop virtually assured, and with general business showing rapid expansion, the coming months are almost certain to be golden ones for the roads which can handle their business.

Not much has been said lately of the public utility situation, but the stock market has gone on day by day reflecting the tremendous improvement in that industry. Numerous leading utility issues on the Stock Exchange have more than doubled in price in a comparatively few months. Many of them were granted higher rates during the post-war period of inflated operating costs and in some cases these rates are still in effect, notwithstanding a very substantial reduction in expenditures. Naturally, this makes for a big increase in the returns reported from month to month. But even in cases where rates have been cut below the peak level, economies have been introduced which have resulted in very greatly improved earnings.
