Water Power Securities

We have been actively identified for many years with the financing of some of the most important hydro-electric developments on this continent, and through our investigations have acquired an intimate knowledge of their many unusually strong features from an investment standpoint.

Our circular No. 1811 describing the securities and properties of several of the leading water power companies will be mailed upon request.

FINANCIAL NEWS AND COMMENT

Strength and Weakness Alternate in Stock Market—Profit Taking at End.

Movements in the financial markets yesterday were curiously mixed. Stocks fluctuated rather widely and had periods of extreme strength followed by moments of equally pronounced weakness. Foreign exchange rates recovered some of the huge losses of the early days of the week. Cotton continued its upward swing, with practically all options getting into new high ground. In the grain markets early losses were partly offset before the close.

Probably the most interesting of all these movements, although without much significance, was that in the stock market. Irregularity marked most of the day's business, but in the last hour some really important profit taking was encountered, with the result that the general list closed substantially below the high marks for the day and in some cases early gains were entirely wiped out. Steel common came in for some more urgent buying again, which carried it up close to its high point for the year. In the late trading, however, it became extraordinarily weak and on persistent offerings declined more than two points from the day's best price.

What transpired in the stock market was largely the result of professional operations based on technical conditions. In the case of Steel common, for instance, the violent advance of Wednesday, followed by renewed strength yesterday morning, was altogether too rapid and a decline was certainly in order. It was not surprising that such news as reached Wall Street yesterday concerning the delicate state of affairs in the Near East should be blamed for the selling. It is characteristic of the financial community that when it can find nothing else to explain moments of weakness it always turns to the foreign political field.

If any evidence were needed that the cable advices from London and Turkey had little to do with movements in yesterday's stock market, it was well supplied by the action of the foreign exchange and commodity markets. In the former there was a sharp upturn of rates which brought most of the continental currencies substantially above the low marks of the preceding day. It is more likely that the weakness displayed in foreign exchange on Wednesday was in anticipation of yesterday's developments abroad. Certainly the recovery of 20 to 25 points and more in French and Belgian rates did not indicate the presence of any new scare abroad. The cotton market, usually weak in a "war market," was strong. Wheat, on the other hand, which always advances in a spirited fashion on war talk, reacted.

The bond market was dull and featureless all day, with little change in the general list. United States issues were fractionally higher, gains running from 2 to 30 points. Foreign Government issues for the most part were lower, but only fractionally so. Money rates remained rather high as compared with what the Street had reason to expect. Call loans on the Stock Exchange commanded a 5½ per cent. rate all day.

Although little change was shown in the Federal Reserve ratio this week there was nevertheless some substantial shifting of funds. While member borrowings expanded by more than $50,000,000 there was a reduction of more than $35,000,000 in reserve deposits at the central bank. This indicated the extent to which banks are being called upon to meet the needs of their correspondents and customers. An increase of $31,000,000 in circulation was another indication of the same thing. Much the same state of affairs was reflected in the statement of the New York bank.
