TRADE REVIEW AND BUSINESS OUTLOOK

Price Movements in Primary Textile Markets Show Irregularity in Week.

RAW SILK ADVANCES

Unfinished Cotton Goods Quotations Easier—Dull Period Experienced.

There was a mixture of price movements in the primary textile markets last week. The outstanding feature was the resumption of buying in the primary raw silk market, which forced prices up and wiped out most of the losses suffered last month. Easier tendencies again characterized the unfinished cotton goods trade, which experienced another intensely dull period.

Despite the continued apathy of buyers raw wool values ruled firm. The raw fur market was weaker. Prices of finished cottons and silks and woolens and worsteds remained unaffected by the fluctuations in their primary markets, as they still are below a parity with raw materials costs.

The scene of activity has been shifted from the primary markets to the retail end. The proximity of Christmas is reflected in the steadily mounting sales of holiday and other goods. Better class merchandise is reported to be moving better than lower grade goods, denoting increased purchasing power of the masses.

Retail Price Trend.

Prices at retail as yet do not reflect the advances in raw material costs. That there still is considerable apprehension among merchants regarding the probable attitude of consumers toward higher prices is evidenced by their caution in placing advance orders with wholesalers and jobbers.

Notwithstanding the lethargic condition of the market cotton goods mills showed little inclination to press business by shading prices. They are well sold up for several months ahead and can afford to maintain quotations, although second hands are selling goods at concessions. Mills expect renewed heavy buying in a few weeks when the present uncertainties of the primary market have been cleared up.

In the finished goods division several numbers of wash fabrics were advanced by a large house. Other finished goods, as domets, ginghams and heavy colored fabrics, which have been below the parity of the market, were quietly advanced by several sellers. Cottons are said to be moving better at retail, but as yet this improvement has not been reflected in the jobbing trade.

Although the market for spring woolens and worsteds again was quiet there were no indications of any softening of prices. Mills have enough orders on their books to take care of their production for several months ahead, so that the absence of new business has not had any effect on operations. Jobbers of dress goods reported a somewhat liveller spot demand, indicating that these fabrics are moving more freely in retail channels. Manufacturers are now engrossed in plans for the opening of lines for the fall and winter of 1923, which is expected to take place within a month or so.

New Blanket Prices Higher.

Manufacturers of woolen blankets have begun to name new prices on their products for the coming season. The new lists already issued show decided advances over last season's levels.

Maintenance of high prices for raw wool for several years to come was predicted by a foremost dealer who spoke at the annual meeting of the American Association of Woolen and Worsted Manufacturers held last Wednesday. He declared that there is every prospect that during the next four years the world will require wool at a rate greater than the present rate of production. The era of high prices, the factor said, will eventually result in a very considerable increase in the production of wool and mutton.

Active buying of raw silk in Yokohama, supplemented by a revival of interest among consumers here, started an upward movement of prices which carried them close to the high level established a month or more ago before the severe reaction set in. There were few offerings at shaded prices or little pressure to sell, as dealers and importers here are confident in the belief that prices will be maintained if not advanced. Manufacturers are following the market rather closely, but as yet have shown no disposition to anticipate their future requirements.

Business in silk goods for next spring continued slow. The entire trade, cutters, jobbers and retailers, are apparently well covered until the end of the year, and unless offered prices below market levels they are not open for much immediate business. Many manufacturers, however, are said to have enough orders to keep their plants busy for the next few months.

Some Silk Fabrics Lower.

Manufacturers are offering concessions in prices of Cantons and satin Cantons and other fabrics which seem to have lost their popularity, in an effort to avoid an overstocked condition later on. Other goods, however, continue firm in price with advances likely. Lack of workers is handicapping a number of mills.

Developments of importance were lacking in the raw fur trade. The new catch is coming into the local market, but merchants are buying sparingly in an effort to depress values. Trappers are being advised to figure on lower prices for muskrat and skunk, with the probability that other American articles will react in sympathy with these two.

In view of the poor fall season in all departments of the trade market leaders declared that values must come down if trade is to be stimulated. Sales at retail stores were slightly larger last week as a result of the cold wave. With the annual clearance sales only a few weeks off it is not expected that there will be a boom in business this month, as it is only natural that many women who have waited this long for their garments will wait until January to get goods at reduced prices.

Business in men's clothing for next spring was spotty. Sport suits and high colors in overcoats continued to enjoy a popular demand, while other styles were again rather inactive. Many cloak and suit houses opened their spring lines. A large number of buyers were in the market looking over the many novelties which manufacturers have brought out. Salesmen for dress manufacturers who already have shown their spring lines are doing a satisfactory business.

CALIFORNIA RAND SILVER.

The California Rand Silver, Inc., reports that during the year ending December 1, 1922, dividends paid to its stockholders amounted to $1,049,600 on the 1,280,000 outstanding shares. Since operations on the company's property were commenced on June 1, 1919, the net value of its ore production up to September 1 last totaled $3,404,659, and on that date ore reserves in the mine had an estimated value of $10,000,000.
