This is the Grand Diagonal Piano, to which, as well as our others, we apply our newly-invented Grand Action, which possesses the following advantages over other action, viz: Greater power, rapidity of repetition, the absence of a tendency to block, and, from its simplicity, a less liability to get out of order.

Machinery, &c.

A NEW THING ENTIRELY.—The most astonishing performance heard of—Barrels, Firkins, Kegs, and the whole cooper family made and finished, without a defect, air-tight and smooth enough to varnish, entirely by machinery.

Our Machine, with the tools used to perform the work, is a patent, for which we have received Gold and Silver Medals and 3 State Diplomas. It takes the timber in the bolt, saws the stave hollow lengthwise grain, cuts them all of equal length, planes both in and outside perfectly smooth, tries the quality of the timber, joints them in a perfect manner, giving each stave the exact proportion of bilge, according to its width, be it wide or narrow; chamfers bowls, cuts the crease, turns the head, and prepares the barrel or keg for the hooping process, in a manner so perfect, complete, and of superior finish, that we challenge the world to produce a better barrel, firkin or keg, than our Machines make, at the rate of 300 per day to the single set, to which we invite the particular attention of all who choose to give them inspection. We manufacture articles of the barrel family, from the smallest white lead keg to the largest cask in general use, all of which can be warranted to hold the most subtile liquids, or be adapted to the packing of dry goods. In fact, the Machine cannot make an imperfect article, except the defect is explicitly in the timber.

We have a shop at Elmira, N. Y., directly on the line of the New-York and Erie Railroad, and the Elmira and Niagara Falls Railroad, five minutes' walk north of the depôt, where any persons who wish can witness the operation of the Machines, and test to their perfect satisfaction, every branch of the work. We will feel the utmost pleasure in exhibiting to such everything connected with the work.

Persons desirous of purchasing the Right and Machines for any location now unsold, can obtain any information in relation thereto by applying to us through the mail. There are but a few of the States remaining in our hands unsold, still, applicants will be referred to the present owners, most of whom will, no doubt, hold for disposal desirable locations within their respective territories. It is conceded by all judges who have examined the Machine, that it surpasses everything that has or can be invented for the same purpose, and must entirely supersede all hand-coopering.

Specimens of our work can be seen by calling on the Editors of The New-York Tribune.

NEW BRICK MACHINE—Now in successful operation in Baltimore. It is so simple that any intelligent negro can learn to manage it in two or three days. You have merely to shovel clay into a box and attach a horse to the sweep. The Machine tempers the clay and molds the bricks in the most perfect manner, such as the most experienced hand can scarcely equal. When burned, they are found to be stronger and more solid than those made in the usual way, because the clay is worked stiffer under the pressure of the screw than it is possible to mold by hand. For a machine driven by steam, the clay is taken direct from the bank and passed through a pulverizer, which removes the stone and prepares it for the soak-pit. Supposing the clay at hand mine men and three boys will mold 1,500 bricks per hour. Price $300. A five Mold Machine worked by a horse, with four men and three boys will make 1,000 bricks per hour. Price $400. A four mold, with the same force, will make 800 bricks per hour. Price $250. Obtained gold medal from the Maryland Institute, 1852; premium from the Maryland Agricultural Society, 1853. For further particulars in a pamphlet, containing full instructions on Brick Burning, address
FRANCIS H. SMITH, Baltimore.

SPECULATION and MONEY.—CLARK'S MERCHANT MILL, decidedly the most perfect piece of machinery ever invented for the manufacture of Flour. For description we refer to the following certificates from Rochester, the greatest milling point in the world:

This is to certify that we were present to witness the practical operation of the Clark Mill, and we take pleasure in saying that it far surpassed our most sanguine expectations. We were presented with some of the flour ground while present, which in quality possesses all the advantages of any we have ever seen. By this simple invention, from $1,000 to $10,000 worth of machinery is saved, also a large saving of power. This Mill is applicable to any power from two horse upward. They are all complete with the right to use them for $400. Only think of it, a complete Merchant's Mill, French Burr Stone Bolt of best quality, all ready to go to work, making from one to two barrels of flour per hour of as good quality as any mill in the world. We unhesitatingly recommend this Mill to the public.

R. Chamberlin, mill proprietor; R. Turner, head miller; E. D. Spelmire, proprietor, Boston Mills; E. Boynton, miller; E. Woolnough, head miller, Whitney Mills; T. Stutford, first miller at Boston; F. A. Kingsley, first miller at Etna Mills; J. C. Stone, proprietor Irving Mills; A. Rushmark, proprietor Crescent Mills; and many other Rochester millers.

The above Mill is on exhibition at the Harlem Railroad Depôt, upon No. 23, entrance on White-st. State and County Rights for sale. Some have made fortunes already out of this patent, and good opportunity still offers. Address the PROPRIETOR at Depôt as above.
