Pro Bono Publico.
New wake, my muse, and tune the lyre,
Sound every note still high and higher;
Tell all the world, and Jersey too,
You've seen the wondrous LIQUID GLUE.

Sound Cooper's Glue all o'er the land,
Till maids and matrons understand
'Twill mend all breaks as good as new,
This matchless COOPER'S LIQUID GLUE.

For limping chairs or broken dishes,
For headless dolls or splintered brushes,
'Tis a sovereign balm; you'll find this true,
If you use the real COOPER'S GLUE.

Our friends, no doubt, long since have learned
That "a penny saved is a penny earned:"
Then invest your Quarter, and we'll save for you
Many a dollar with the LIQUID GLUE.

To stop all fraud, examine well
The outside wrapper, and you can tell,
By the autograph of COOPER BROTHERS,
The simon-pure from all others.

At Eighty-one, in Barclay street,
In the great New-York, then haste to meet
With the agent, FOX, who'd sell to you
The real COOPER'S LIQUID GLUE.

To Consumptives.
WILBOR'S COD LIVER OIL AND LIME
Has now been before the public for four years, and has steadily grown into favor and appreciation. This could not be the case unless the preparation was of undoubted and high intrinsic value. The combination of the Phosphate of Lime with pure Cod Liver Oil, as prepared by Dr. WILBOR, has produced a new phase in the treatment of Consumption, and all Diseases of the Lungs. This article can be taken by the most delicate invalid, without creating the disgusting nausea which is such a prominent objection to the Cod Liver Oil when taken without Lime. This preparation is prescribed by the regular faculty, and sold by the proprietor, wholesale and retail.

ELEMENTS
OF
CHEMICAL PHYSICS.
BY JOSIAH P. COOKE, JR.
Erving Professor of Chemistry and Mineralogy, in Harvard College.
Illustrated by 400 wood-cuts.
With a copious Index.
One volume. 8vo. Price $3.
This book has been prepared to meet a want to which the division of subjects usually adopted in the colleges of this country, between the various departments of physical science, has given rise. It covers that portion of Physics which is conveniently taught in connection with Chemistry. It treats, for example, of the properties of matter in its three conditions, including crystallography, hydrostatics, and pneumatics; of heat in its relations to matter, and of the various methods by which the weight and volume of solids, liquids, or gases, are accurately measured.
In order to adapt the book to the purposes of instruction, it has been prepared on a strictly inductive method throughout, and a much of the subject matter of mechanics has been given at the beginning of the volume as was necessary to secure this object. For the same reason each chapter is followed by a large number of problems, which are calculated not only to test the knowledge of the student, but also to extend and apply the principles stated in the text. Care has been taken to include the latest results of science, and several of the subjects have been so far developed as to illustrate the methods of physical research. The Appendix contains a large collection of tables, such as are of daily use in the chemical laboratory, and which will render the work valuable to the professional chemist.
