ELEMENTS
OF
CHEMICAL PHYSICS.
BY JOSIAH P. COOKE, JR.
Erving Professor of Chemistry and Mineralogy, in Harvard College.
Illustrated by 400 wood-cuts.
With a copious Index.
One volume. 8vo. Price $3.

This book has been prepared to meet a want to which the division of subjects usually adopted in the colleges of this country, between the various departments of physical science, has given rise. It covers that portion of Physics which is conveniently taught in connection with Chemistry. It treats, for example, of the properties of matter in its three conditions, including crystallography, hydrostatics, and pneumatics; of heat in its relations to matter, and of the various methods by which the weight and volume of solids, liquids, or gases, are accurately measured.

In order to adapt the book to the purposes of instruction, it has been prepared on a strictly inductive method throughout, and so much of the subject matter of mechanics has been given at the beginning of the volume as was necessary to secure this object. For the same reason each chapter is followed by a large number of problems, which are calculated not only to test the knowledge of the student, but also to extend and apply the principles stated in the text. Care has been taken to include the latest results of science, and several of the subjects have been so far developed as to illustrate the methods of physical research. The Appendix contains a large collection of tables, such as are of daily use in the chemical laboratory, and which will render the work valuable to the professional chemist.
