Recutting -:- Axles

OF ALL SIZES, FROM 1 TO 4 INCHES.

THE wheels of all vehicles become loose on the spindle after one or two years' use, caused by friction. On a common straight axle the box is worn on each end, also the nut and collar, which leaves the spindle too long for the box in the wheel. By cutting down the spindle on the point of axle even with the box and running the thread up to it and cutting off the point that would protrude through the nut, the wheel is made to fit again like when new, providing the spindle is not worn too flat.
