WEDNESDAY, OCTOBER 18, 1882.

A New Jersey Sugar Farm.

HAMPTON, VA., Sept. 4th 1882.

EDITOR GAZETTE:—I enclose an interesting article in the production of sugar from Sorghum. The subject is attracting much attention in the Northern States. Naturally it would, inasmuch as the country consumes a vast amount of sugar and very little is produced in the country itself. There is one paper published in it, Louis Meinber devoted to the Sorghum interest. The late Commissioner of agriculture, General Le Duc gave much attention to it, but the means put at his disposal by the United States Government were not sufficient to accomplish much. Some very interesting, and in a measure, successful experiments were made, in the vicinity of Washington. The subject was finally referred to a commission of scientists, of which Prof. Silliman of New Haven was one. This Commission reported quite favorable, and declared their belief that the Northern States would in time become sugar producing. General Loring, the new commissioner of agriculture, instead of continuing the experiment, has issued a circular offering a number of premiums of about $1,200 each for the best report on practical results in producing sugar from this cane. On the other hand a pamphlet has been recently published asserting that Ingus can not be profitably made in this way, and claimed that beet root sugar is the "sugar of the future." However, a number of persons in different parts of the country claim great success in this manufacture. That the Sorghum cane yields the juice is not disputed. About 100 gallons of molasses are obtained from an acre, and this is worth about fifty cents per gallon. If sugar can be obtained from this of the value of $50, it will probably pay to go into the business. The cost of raising Sorghum is not more than that of cultivating corn, about $5 per acre. If cane of this kind can be planted and will mature in six months, and sugar can be satisfactory produced from it, it will result, one would suppose in its cultivation in the Hawaiian Islands. It pays to raise cane in the Eastern and Middle States where the product is twenty bushels to the acre, valued at $10, and if Sorghum sugar can be made to do a little better, it will be extensively cultivated. As the only difficulty in making this sugar is the right method of getting it to crystallize, it seems as if the avoidance of that difficulty would be only a question of time. Whether Sorghum sugar can or can not be profitably made, one thing is sure that the production of beet sugar will be vast in the United States within the next twenty-five years. Several factories for this purpose are now in successful operation. The farmers are conservative, but when they once become convinced that there is any money in it, they will push the production with all the energy which thrifty farmers have. The capital in the cities is getting tired of three per cent interest, and will go into this matter largely and aid the farmers.

W. N. ARMSTRONG.

A half-dozen miles above Cape May, along the West Jersey Railroad, some twenty-five or thirty farmhouses, chiefly rather ancient ones, are strung out along the pike. To this struggling stretch of hamlet abiding-places the name of Rio Grande was given many years ago. When Northern capitalists undertook the production of molasses and sugar, sugar cane was discarded and sorghum was used instead. This is planted from the cane seed, which it produces, as does any other cereal, in the form of beards or heads. But inasmuch as there are at least eighteen varieties of sorghum, some of which contain comparatively little saccharine matter, a great many original Northern planters, after considerable sandiness and patience, were rewarded with crops which could only be utilized as cattle fodder. This obstacle having been overcome, another and more insuperable one was met with; for while from the saccharine matter finally evolved molasses, and even molasses-sugar could be manufactured, yet crystallization could not be effected and sugar could not be produced. It remained for Charles H. Hilgert, the recently defaulting Philadelphia sugar refiner, and his chemist, Henry A. Hughes, after numberless experiments, to discover certain reliable methods to secure the much-desired crystallization. Previously sugar crystals had been produced in the North, but it had ever been a matter of accident. One effort might be successful, while the next dozen attempts would prove failures. Mr. Hilgert and his chemist succeeded, however, in reducing the factor of uncertainty in production to a minimum. This obstacle having been overcome, they looked around for a tract of land where the conditions of soil and climate were adapted to the raising of sorghum. Cape May County having been strongly recommended, because of the dryness of its soil, it was decided to settle therein, and in 1881 a temporary sugar refinery was constructed at Bennett's Station, two and a half miles below Rio Grande. A small piece of ground was planted with sorghum, and a fine crop was raised. This was passed through the various processes necessary to sugar production, and the result was successful beyond all expectation.

Quite a large brick refinery was immediately constructed at Rio Grande, which was fitted up as completely as can be found outside of Cuban refinery. To insure the production of a crop by the neighboring farmers, a bill was passed by the New Jersey Legislature, offering a premium of one dollar per ton upon each ton of cane produced by the farmer, and a premium of one cent per pound upon each pound of sugar manufactured by the refiner. Eight hundred acres were planted with sorghum seed by the neighboring husbandmen, and a fair crop was realized, but the cane from only 250 acres ever reached the refinery, the balance being used by the farmers for cattle fodder, a drought having ruined the corn crop pretty thoroughly. The venture of 1881, which not so satisfactory as had been anticipated, was so eminently profitable that immediate steps had been taken looking to an extension of the enterprise before another year, and it was concluded to combine the work of production with that of manufacture. Accordingly the Rio Grande Sugar Company was incorporated, with George A. Potts as President, James B. Scott, a son of the late Col. Thomas A. Scott, as Treasurer, and Charles M. Hilgert as General Manager. Immediate measures were then taken toward securing sufficient land for planting purposes. Farm after farm was purchased outright, until fifteen hundred acres in all passed into the hands of the company, of which 1,000 acres were placed under cultivation. The plantation was divided into four sections, each under the charge of a foreman. Just now the plantation is in magnificent condition, as the cane is fast approaching a ripened stage. Much of it is ten feet high, and some is even considerably higher than that. At the present time there is no cane even in Virginia which has attained so forward a state. The small lot of orange cane, especially, is in splendid condition, and next year this cane will be almost exclusively used in place of amber, as the latter does not usually grow to so large a size. Within a week, probably, the cutters will go into the fields, and the work of harvesting will begin. The process of cutting is a double one. Not only is the stalk cut down, but the top, containing the seeds, is also cut off. About the same number of bushels of cane-seed to the acre is produced as of any cereal. Thousands of bushels will, therefore, be threshed out. Comparatively a small portion of this year will be required for replanting next year, but a large quantity of the seed will be sold. It is used in the manufacture of starch and glucose; also, when ground, as a flour, similar to buckwheat, for baking purposes.—[*Philadelphia Press.*

Supreme Court of the Hawaiian Islands—July Term, 1882—In Banco.

J. R. MILLS vs. R. BADOUR.

Before Judd, C. J., McCully and Austin, J. J. Opinion of the Court by Austin, J.

The only grounds on which relief is claimed in the bill against the judgment at law entered in the Supreme Court in favor of the present defendant against the present plaintiff for $2,000 damages, are that the plaintiff was taken by surprise in the trial of that case, and that since the trial he has discovered evidence which is material and not cumulative and which probably would have modified the result of that trial.

The effort to obtain relief on the ground of surprise has, we think, very properly been abandoned on the argument before us. Only the other ground referred to remains.

There is no allegation or claim of fraud or mistake.

The sole grounds of relief in equity against a judgment of a court of law, as shown by the authorities cited by the Chancellor in his opinion, are for accident, fraud, mistake or surprise, and, where on account of one or more of these causes, it would be against conscience to execute the judgment.

In Kerr on Injunctions p. 22 cited by the Chancellor, it is said that "The mere fact of "the discovery of fresh evidence is not a "sufficient ground for the interference of the "Court." At the most the discovery of fresh evidence is all that can be claimed here. A judgment at law should not be lightly interfered with in equity. As matter of fact, in rare instances, even upon the ground merely of new evidence, judgments at law have been enjoined or modified in equity; but such cases have been only where, by the result before, and by what was offered now, it seemed to be absolutely sure, to the Court that a wrong had been done by the judgment attached; and that it ought not to be enforced. That is not this case. At the most, what is presented here raises a doubt as to whether the judgment ought not to have been less than it was. The court can see that the evidence if presented in the Court below would have been disputed, at least by the present defendant, and it might not have been believed by the Jury.

We cannot say, in the light of this new evidence, that the judgment below was against good conscience or that it ought to be modified or changed in any respect. That there is a chance that it might have been so changed is no ground for relief in this Court against a judgment at law, even though it were possible that we should think that if the motion in the Supreme Court had been made in time, it ought to have secured a new trial.

A motion for a new trial on the ground of newly discovered evidence, in the Supreme Court, before final judgment, entered, and a bill in equity after final judgment, to attach it, for a similar reason, are to be very differently treated. In the latter case the Court of Equity must deem it conclusively shown that injustice has been done, otherwise the judgment must not be disturbed.

No such case is made by the bill of complaint, and the demurrer must be sustained, and judgment absolute upon it be directed for the defendant.

But on further consideration the Court are now of the opinion that the plea in bar is not well made.

A. S. Hartwell for Plaintiff, S. B. Dole for Respondent.
