WEDNESDAY, JANUARY 17, 1883.

Tonic Solfa.

This system of music, although of recent introduction into the United States has been tested in England for twenty-five years.

It originated with a Miss Glover, who had charge of a mission school somewhere in the suburbs of London. She began a list of experiments with a view to simplifying the study of music for the children of her school.

It gradually, but quietly extended till about the year 1846, when Mr. John Curwin, a congregational minister was commissioned by a convention of ministers and christian workers to devise some plan for the development of congregational singing. Adopting Miss Glover's system as a basis, he spent years in seeking, by every possible means to bring it to perfection. It succeeded far beyond his expectations, for others, seeing his success, adopted it, until its adherents were numbered by hundreds of thousands.

It is now the national system of music in Great Britain. It is stated that out of five thousand three hundred and fifty-four schools, in which music is taught systematically, only six hundred and ninety-one use the Eard ok, while three thousand nine hundred and eighty-seven use Tonic Solfa. The music instructor to the London School Board, on visiting the one hundred and twenty schools under his direction, gave the teachers the privilege of choosing their own system, and they all chose the Tonic Solfa.

While Tonic Solfa is an accomplished fact in Great Britain, a complete system of notation, finding its way into home, school and church, carrying its refining influence into institutions of charity, it is but in its infancy in America. The greatest impetus given it, was in Aug. 17th, 1880, when "The American Tonic Solfa Association" was formed by the teachers of this system, at Chautauqua, N. Y., for the purpose of promoting the system among the people of the United States. The 22 annual meeting of this Association was held at Springfield, Mass., July 27, 1882. Teachers were there from more than half the States in the Union—enthusiastic men and women who had made it a success, and it is said to have been inspired to see the crescendo of enthusiasm, not only among them, but among those students to whom the Solfa was entirely new.

The musical papers are now discussing the subject, and it is finding its way into religious and secular papers. The *Christian Union* speaks of it in its highest terms.

So impressed am I with the belief that the Tonic Solfa will become the national system of music in this Kingdom, and be, not only a civilizing but a christianizing element, that I am impelled to do all in my power to introduce it among the educators of this people.

The Hawaiians are a musical people, but they are not ready to master all the difficulties of the staff notation; and these difficulties are taken away in the Tonic Solfa. It is so simplified that all may learn.

In the first place it is the natural method—teaching through the ear rather than the eye—making music a matter of sound rather than sight.

The pupil is taught to think music—only enough outward sign being given to convey an intelligent idea of the sound represented. Without the long drill in reading notes, there is given to the mind a quick and correct mental conception of the time.

So much time is occupied in learning to read music by the staff notation, that but little attention can be given, by the masses, to the principles, while in Tonic Solfa, the pupil is taught to think and write music and the reading comes as a matter of course.

It makes independent readers and not singers who learn upon the instrument.

All technical terms are removed and only such terms as the smallest child may understand are employed.

In the staff notation, the scale, in the different keys, is represented in seven different positions, or, including both clefs, fourteen, while in the Tonic Solfa there is but one way of representing the scale.

Harmony is received almost unconsciously, and understood from the beginning.

It does not replace, but leads up to the staff notation by gradual, easy steps, and the pupils solfa and master it readily, because they are ready for it.

Having heard a short sketch of the history and advantages of the system, you are still at a loss to know what it is. It is simply this:

At the beginning of your music, instead of your two clefs, flats or sharps, you have for a signature "Key F," or "Key A," and it is understood that *do* always represents the key note.

Then, instead of notes on the staff, only the initial letters of the Tonic Solfa syllables are used.

The octaves above are represented by figures above the scale-letters, and are called one-do one-me, etc., and the octaves below are written with figures below the scale-letters, and are written do-one, me-one, etc.

Time is represented by the space between equidistant bars, called measures, and each measure is divided by the color into pulses; the pulse being the standard of measure.

Each pulse may be sub-divided into halves and fourths by the period and comma.

If a note is to be prolonged, a dash is used in a whole or part of the following pulse. A rest is indicated by a vacancy. The children readily understand that where there is nothing to be sung they sing nothing, and it saves learning those puzzling characters called "rests."

The names for the chromatic tones are the ordinary Tonic Solfa names for the notes, with the vowel changed to *e*, for sharps, and *a*, for flats.

The change from one key to another is made readily by using a bridge-note in passing over to the other key.

Thus the whole process is so simplified that the study of music becomes "a thing of beauty and a joy forever."

It is adapted to all classes of music, from the simplest kindergarten songs, to the finest composition of the best composers. But it is especially prepared for the masses who would not otherwise become musicians. Let the people sing—let all the people sing understandingly, and sing for noble ends.

There should be no rivalry between the systems. Call this the stepping stone to the staff notation if you will. It is like the Grube method of teaching numbers, or the kindergarten methods for the children, compared with the old systems. It aims at the same standard but accomplishes its results in a much shorter time, and with much less labor and far more pleasure.

And in this age, when every new invention for lessening labor is welcomed, let us hail with delight this system of Tonic Solfa.

Names of the United States—Interesting Historical Facts.

At a recent meeting of the American Antiquarian Society, Hamilton B. Staples read a paper concerning the origin of the names of the States of the Union. From among other facts are taken the following:

The name of California first originated in the imagination of the author of a Spanish romance, "Las Sergas de Esplandian." Here the "island of California, where great abundance of gold and precious stones is found," was described. The name was probably given to the territory now embraced in this State by some of the Spaniards with Cortez, who, no doubt, had read this sensational romance.

Oregon was a name formerly given to an imaginary river of the West. Carver, an American traveler, mentions it in 1763. In describing the river, he evidently confounded it with the Missouri, but the name was finally applied to the present State of that name.

New Hampshire was named from Hampshire county, of England, by John Mason of the Plymouth Company, to whom the territory was originally granted by the English Government.

The State of Massachusetts was named from the bay of that name. The origin of the word Massachusetts is from the Indian "massa," great, "wadchusah," mountains or hills, and the suffix "et," meaning at or near.

There are many conflicting opinions concerning the origin of the name Rhode Island. Some believe it to have been named from the ancient Isle of Rhodes; others, from the Dutch, Rhode Eylandt, signifying red island. It might also have been called Rhode Island or Roadstead Island, being near the harbor.

Connecticut, spelled in an Indian dialect, is Quin-neh-tukqut, signifying "land-on-a-long-tidal-river."

New York is named from the Duke of York, the original grantee. In the charter he was given all the land "from the west side of the Connecticut River to the east side of the Delaware Bay."

The territory of New Jersey was given by royal charter to Sir George Carteret and Lord Berkeley. Carteret, in England's Great Civil War, had bravely defended the Isle of Jersey, in the British Channel, and his new possessions in America were named in commemoration of this fact.

Pennsylvania was founded by William Penn, and it is the only State named from its founder. The suffix "sylvania," signifying "forest land," is descriptive of the general character of the country.

Three counties lying south-east of Pennsylvania were formerly territories of that State. In 1701 they were granted a separate charter and named Delaware after Lord De Lewar, who first explored the bay into which the river empties.

Maryland was named from Queen Henrietta Maria. In the charter the name is Latin was *Terra Mariae*, meaning land of Mary or Mary's Land.

Virginia was called in honor of Queen Elizabeth who was known as the Virgin Queen.

The territory of the Carolinas was granted to the French settlers in 1663 and was named after Charles I of France.

King George II of England was the sponsor for the Southern State of Georgia.

The name Maine was given to that State descriptively, since in the original charter it was considered "the Mayne Land of New England."

Vermont was also a descriptive name, being formed from two French words "verd" and "mont," meaning green mountain.

Kentucky is from Kentucke, an Indian Shawnoese word, signifying "the head of a river" or "long river."

Mississippi is from the Indian Meescseepee, meaning not the "father of waters," but "the great water."

Colorado is named from the Rio Colorado river. The name is of Spanish origin, and means "ruddy," or "red," referring to the color of the water of that river.

Tennessee is supposed to have been named from Tanassee, one of the chief villages of the Cherokee Indians, which was located on the banks of the Tennessee River.

The name Minnesota is from the Indian Minisotah, meaning "colored water."

The State of Nevada is named from the Sierra Nevada Mountains, which in turn are said to have been named from the Sierra Nevadas of Granada.

Nebraska takes its name from the Nebraska River. The name is of Indian origin, meaning "shallow river."

Kansas is also named from its principal river. A tribe of Indians, formerly in that locality, were known as the Kansas or Kows, and the State is probably named from them.

The origin of the name of the peninsular State of Florida is told by historians as follows: In 1512, Ponce de Leon sailed from France to the west in search of the "fountain of youth." He first saw land on "Easter day," and on account of the richness and quantity of the flowers found on the new possessions, he called it Florida.

Alabama is named from an ancient Indian tribe of the Mississippi Valley. The name itself signifies "here we rest."

Ohio takes its name from the river on the southern boundary. The word is from the Wyandotte Indian dialect, o-ha-zuh, and means, "something great."

Iowa is named from the river of that name; the river from the Ioway Indians.

Missouri was also named from a river. The word is from the Indian Min-ne-sho-shay, signifying "muddy water."

The name Wisconsin is of French-Indian origin. It was formerly spelled Ouis-consin, meaning, "westward flowing."

Illinois is derived from the Delaware Indian word, "Illin" or "Leni," meaning "real men," and the soft French termination "ois."

The name Michigan, comes from the Indian words of Algonquin and Chippewa origin, "Mitcha," great, and "gan," lake.

Louisiana was called in honor of Louis XIV of France and was formerly applied to all the French Possessions in the Mississippi Valley.

The word Arkansas is of Indian stock. A tribe of Indians, who had rebelled and separated from the Kansa nation, were celebrated for the fine qualities of their bows. From this they were called Arc or Bow Indians, and afterwards Arkansas.

Few states have been named from their original discoveries. The names of La Salle, Cabot, De Soto, Marquette, Coronado and Fremont are waiting to be incorporated into history, by the naming of some new State in their honor.

A Quiet Horse.

Eli Perkins writes:—My wife, having been run away with once, is always afraid the horse is going to run away with her again. Yesterday when Harrington, who runs the Maplewood Hall stables, brought up a pair, he had to stand the usual questioning:

"Now are they very gentle?"

"O, certainly—kind as kittens."

"Did they ever run away?"

"Never."

"Do you think they could run away?"

Harrington looked at the horses sadly and said: "Madam, to be frank with you I don't think they could."

"Well, have they ever been frightened?"

"No, never. Nothin' could frighten 'em," said Harrington.

"Has anything ever happened to them that would have frightened them if they had been skittish?" continued my wife, earnestly.

"Well, yes, ma'am; suthin did happen t'other day, that would have skeered 'em if they'd been skittish."

"What, Harrington—what?"

"Why, I was drivin' along down Woolsey hill, a storm came up, an' six streaks o' lightnin' struck them horses right on the hood, an'——"

"Did they run?"

"No, ma'am; they didn't move; they just stood still an' pawed the ground for more lightnin'. They liked it."

"An', the next day," continued Harrington, "a city feller was drivin' this team, an' he let a railroad train go right through 'em."

"Did it kill them?"

"No, but the city feller was all used up. But you oughter a seen them horses. They acted so human like. Why, when they picked 'em out of the trees, they walked straight up to the city feller, took him by the seat of his pantaloons——"

"Lifted him right back into the wagon again, an'——"

"My gracious me!"

"An' then they hitched themselves back on to the wagon and drove themselves home. Didn' they Mr. Kettelle?"—*N. Y. Com. Advertiser.*

The Electric Light.

Mr. Edison's system of providing an incandescent electric light for domestic use in a given district has just been put to a practical test in New York. The district selected occupies an area of nearly a square mile. Only one source of supply is provided, and that furnishes the illuminating power for 18,000 lamps, the electric current passing through 7½ miles of mains. The result, according to a telegram, is that the severest demands which the consumers have been able to make upon the new system have been satisfied. The New York *Herald* is using in its business premises an insulated plant on the same principle; and the managers state that they are satisfied in respect of the commercial aspect of the question. No new obstacle has presented itself to the success in practice of Mr. Edison's theory, and scientific men will be interested to know that this first practical experiment demonstrates the soundness of the inventor's application of the multiple arc system, pure and simple, as distinguished from the series system, or the combination of the arc and series systems. Throughout the entire district lighted as described, each lamp was independent of all the others. On inquiry before the Select Commission of the British House of Commons, Dr. Siemens said that it was impossible to supply electricity for domestic lighting, from one source, over a greater area than a square quarter of a mile. On Monday night although only 3,000 lamps were lighted, they were distributed over the entire district of the square mile. In the district there are 1500 consumers of gas, of whom 1100 have subscribed for the electric light.

REAL ESTATE BROKER

EMPLOYMENT AGENT

And General Business Office.

Houses and Lands

Leased and Sold

In All Parts of this Kingdom

ROOMS TO RENT THROUGHOUT HONOLULU AND SUBURBS. Landlords and Owners of Houses and Rooms will bear in mind that I am the only recognized Real Estate Agent and Broker on the Islands, and it will be to your interest to place your Lands, Tenements and Rooms into my hands for Disposal.

Particular attention given to procuring responsible Tenants, Safe Mortgages taken of Property for Advertising, Insurance, Repairs, Taxes and Water Assessments attended to.

LOANS NEGOTIATED

EMPLOYMENT BUREAU

FOR ALL SEEKING WORK ON THESE ISLANDS.

Agents and Managers of Plantations, Shipping owners, and Tradesmen, and all employers who desire careful attention to their business, would do well to notify me when vacancies exist.

HOMES AND EMPLOYMENT.

Our friends abroad who contemplate visiting or removing permanently to this Paradise Islands will find it advantageous to their comfort to call on me, on their arrival, and select their homes, and there desiring Employment will be likewise provided.

GENERAL OFFICE WORK

Of every description attended to. Bills collected, Papers and all kinds drawn, Books and accounts kept and solicited, and care taken to seek the interests of all my customers.

Having recently arranged my new office departments in the new Fire-proof Brick Building adjoining the new "Gazette" office, I am fully prepared to meet more extended demands for business than heretofore, and with my enlarged facilities I invite the patronage of citizens on the other Islands to make their purchases in Honolulu through me, guaranteeing to give all orders close attention, and to purchase all and every kinds of merchandise solicited, procuring the same on the best marketable terms the city affords.
