Hawaiian Gazette Supplement, July 25

The Culture of Peanuts.

I noted an enquiry, a few weeks ago, concerning the cultivation of peanuts, and herewith give you my method, promising that, though it may not be the very best in use, yet it has invariably given me a good stand and a fair yield of merchantable nuts. Light sandy soil will certainly produce the brightest nuts, but I have planted in sandy loam, stiff clay loam and dark new ground, and have always realized the top market rate for my crop. I flat-break my land, put it in good order with a harrow and then mark it off three feet between the rows. To make peanuts, lime is as essential—the amount to be regulated by the quality of the soil. On my farm I use, in the marking, at the rate of twenty bushels of lime to the acre and boil on it.

The seed must be shelled before planting and should be tested as to its germinating power. I open beds with one furrow of a turning plow with a small mold-board and drop a single nut every foot, dimerting the hands rather to make the distance thirteen to fourteen inches than ten or eleven. I cover with a small harrow and board (fastened to hold teeth), pieces being long, so that the horse can walk in one furrow and the man in the other. I plant in the early part of May and endeavor to get the seed in just before a rain if possible. A little manure is a dangerous thing, often inducing the seed to swell without advancing it to full germination and giving, as a result, a poor stand.

When the greater part of the plants are up I bar them off on both sides as close as the plow can be run. The boys then go to work and chop out between the plants thoroughly. Earth is then thrown back to the row. I then work them two or three times with a cultivator and lay them by with a small sweep down the middle. If grass and weeds get a start on them it is necessary to hoe them a second and even a third time. The yield varies of course with the quality of land, the goodness of the stand and the character of the weather. I should say that forty bushels is an average crop. Cattle and horses eat them with avidity and need much less corn when they are fed to them than when they have hay or fodder for long feed.—*Country Gentleman.*

Eggs as Food.

Eggs, at average prices, are amongst the cheapest and most nutritious articles of diet. Like milk, an egg is a complete food in itself, containing everything necessary for the development of a perfect animal, as is manifest from the fact that a chick is formed from it. It seems a mystery how muscles, bones, feathers, and everything that a chicken requires for its perfect development are made from the yolk and white of an egg; but such is the fact, and it shows how complete a food an egg is. It is also easily digested, if not damaged in cooking. Indeed there is no more concentrated and nourishing food than eggs. The albumen, oil, and saline matter are, as in milk, in the right proportion for sustaining animal life. Two or three boiled eggs, with the addition of a slice or two of toast, will make a breakfast sufficient for a man, and good enough for a king.

According to Dr. Edward Smith, in his treatise on "Food," an egg weighing an ounce and three quarters contains 120 grains of carbon and 17½ grains of nitrogen, or 12.20 per cent of carbon and 2 per cent of nitrogen. The value of one pound of eggs, as food for sustaining the active forces of the body, is to the value of one pound of lean beef as 1,361 to 900. As a flesh producer, one pound of eggs is about equal to one pound of beef.

A hen may be calculated to consume one bushel of corn yearly; and to lay ten dozen or fifteen pounds of eggs. This is equivalent to saying that three and one tenth pounds of corn will produce, when fed to a hen, five sixth of a pound of eggs, but five sixths of a pound of pork require about five pounds of corn for its production. Taking into account the nutriment in each and the comparative prices of the two on an average, pork is about three times as costly a food as eggs, while it is certainly less healthful.—*Boston Journal of Commerce.*

The Census of India.

The work of tabulating the first general census ever taken in India is about completed. In an area of 1,372,858 square miles, or a little over one-third of that of the United States, there is a population of 252,091,921, or over five times the population of the United States. There are nearly as many dwelling-places in India as people in America. The males exceed the females by about 9,000,000. Much trouble was experienced in getting the natives to answer questions concerning their condition, and the military authority was in some cases called in, but out of a population of 224,095,000 there were found to be 20,734,628 confessed widows, the percentage in the Hindu population being 19.71 and in the Mahommedan religion 12.93. The percentage of widows in England is 1.22 and in Italy 2.71. The reason of this abundant fury in India is the law that widows cannot marry again. Of this vast horde of people but 19,000,000 can read and write, and but 4,000,000 are under instruction. The doctrine of exclusive salvation, with a hideous probationary procession for the heathen, stands in pretty bold relief in the following table giving the religious creeds of India:

Hindoos	191,691,000
Mahommedans	50,122,000
Nature-worshippers	9,426,000
Buddhists	7,416,000
Christians	1,862,000

Of the Christians over one-half are Catholics. There are beside these several million of minor divisions of oriental religious beliefs.

RIDGE HOUSE,
South Kona, Hawaii.
THE UNDERSIGNED BEGS TO notice his friends and the public in general, that he has leased the above well known HOUSE, and is now ready to receive visitors.
The House is situated about half way from Kailua to Kealakekua Bay, at an elevation of about 1,400 feet, and offers a change of climate, in addition to the rare fruits and many sights of the district, the designs of both interior and exterior. Both Houses connected with the establishment.
Terms Moderate.
H. H. TODD.

To the Proprietors of Sugar Mills.
AS AGENT FOR FIRST CLASS ARTISANS, the undersigned is prepared to contract for building Performed Bar, Air Furnaces, with great capacity, according to the designs of the late celebrated chemist, Professor Graham, formerly professor of Chemistry at the Andersonian University, Glasgow, Scotland.—Presenting all parties from any immediate Patent Infringements in Hawaiian which impair the stability of the work and mitigate the results obtained from building the Furnace Grand from the cultured & existing permanent objects. On Having of Iron, Indian Boiling Cards, Conveyers, engines, etc.
F. COOKLEY, 174 Queen Street.

PATENT NOTICE.
WHEREAS A PATENT WAS ISsued to Kingdon & Jarvis on the 8th June, 1880, in the Office of the Patents, under the laws of this Kingdom, for a Gas and Coal Tank Connecting Furnace, this is to warn all persons against infringement of the said Patent.
C. BREWER & COMPANY,
Agents of the Patent Patentees.
Per J. G. Capron, Secy.
Honolulu, February 1st, 1882.

MANUFACTURED EXPRESSLY FOR THE
Honolulu Carriage Repository,
NOS. 50 AND 52 KING STREET, OPPOSITE THE POLICE STATION
FRANK J. HIGGINS : : Proprietor,
BY THE WELL-KNOWN FIRM OF
R. F. Briggs & Company, of Amesbury, Mass.,
ONE OF THE LARGEST AND MOST RELIABLE CARRIAGE MANUFACTURERS
In the United States.
Read the Following, From the "San Francisco Journal of Commerce:"
"The firm of R. F. BRIGGS & CO. have their Factory at Amesbury, Mass. It comprises four large buildings, all connected by an elevated bridgeway. The first large building, 150x50 feet, is the factory for wheels, bodies and gear. It contains all the latest improved machinery for producing all the different parts that go to make up carriages and all other kinds of vehicles. Of the second, a brick building, 100x60 feet, the first floor is occupied as the blacksmithing shop, where there are run daily thirty fires. All the ironing of carriages is done here. The second department is used as a leading and bedging up room. The next two floors—the third and fourth—are used for gear finishing and trimming of bodies, and as varnishing rooms. The third is a brick structure—three stories high—is a painting and store house; when full it has a capacity of storing 300 carriages. The fourth and last three-story building, 80x45, is the section devoted to painting the bodies, tire-setting and general blacksmithing. This factory is complete in every part. It employs one hundred and fifty mechanics in the different departments, and turns out from 2,500 to 3,000 per year, consisting of some forty different styles of vehicles, using the very best material. The spokes and felloes are made from the best second-growth white hickory, while the hubs are made from the best gum, white and yellow elm. All their wheel stuff is from the root-hills of the Blue Ridge mountains, in North Carolina.
The factory turns out a variety of fine carriages, buggies, phaetons and wagons, and with the facilities and experience of twenty years the proprietors are enabled to produce in style, quality and finish as fine a carriage for the money as can be found in the United States. In our visit a few days ago in the branch house in San Francisco we found a complete stock of carriages and buggies, and new goods arriving and on the way, all of which are especially made with a view to standing the climate of the Pacific Coast."
Now on Hand and to arrive per Ships, Barks, a fair Assortment of
Fine Carriages & Wagons
