KINDEL DIVANETTE

An unexpected guest need not distress you if you have a Divanette in your home. One minute it is an exquisitely designed, handsomely finished settee, and the next it is a luxurious, full sized bed with mattress and springs and all the bedding in place.

The Divanette does not look convertible, but it is. No one would ever guess that this exquisite settee concealed a dandy bed. It is easy to open, two simple movements, ridiculously easy to operate it.

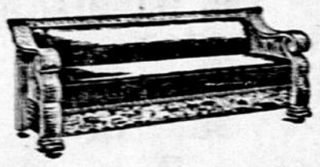
Its comfortable mattress is filled with fluffy, aerated cotton felt, it never packs, it never gets lumpy, it can easily be removed for cleaning. The heat from a radiator or a sun bath will fluff it up like new. Its springs are the Kindel Suspension weave kind, made with helical coils around the entire edge, not just at the ends, as in most springs. They cannot sage and are guaranteed absolutely. There is no spring made which can compare with the Kindel Suspension for resiliency and comfort.

The Divanette really provides an extra room—a bedroom—without the added expense of bedroom furniture. The Divanette way is the most convenient way to provide for unexpected guests.

The convenient money-saving, space-saving, time and work-saving features of this beautiful piece of furniture mean a great deal to every busy housekeeper. Get one today and let it pay for itself in the cost of the extra room it saves.

Made in golden, fumed or waxed finishes. Price $30.00 to $60.00, with or without mattresses.

No. 223. Short Davenport. Filling moss over tow. Genuine oak ends; arms, posts, top rail and front rail veneered with selected quartered oak. We use no imitation quartered oak. Width of posts, 5 inches; width of arms, 5½ inches; size of bed 47x72 inches. Golden oak polished finish; steel casters. Made in Besto leather. Value, $33.00; sale price $25.00.



No. 245. Short Davenport. Filling moss over tow. Genuine oak ends; arms, posts, top rail and front rail veneered with selected quartered oak. We use no imitation quartered oak. Width of posts, 4½ inches; width of arms, 5½ inches; size of bed, 47x72 inches. Golden oak polished finish; steel casters. Made in Besto black imitation leather. Value, $45.00; sale price, $32.00.

No. 212. Cushioned hard edge. Filling, moss over wood fibre. Genuine oak ends, arms, posts, top rail and front rail. Width of posts 3¼ inches; width of arms 4 inches. Size of bed, 48x72 inches. Golden oak, polished finish. Castered. A good $29.00 value. Sale price $19.50.

No. 316. Long Davenport. Filling, moss over tow. Genuine oak ends; arms, posts, top rail and front rail veneered with selected quartered oak. Width of posts, 4 inches; width of arms 4 inches. Size of bed 47x72 inches. Golden oak polished finish. Steel casters. Covered with Spanish Besto leather. Value $30.00. Sale price $23.00.

No. 300. Cushioned hard edge. Filling, moss over wood fibre. Genuine oak ends, arms, posts, slats, top rail and front rail. Width of posts 3¼ inches, width of arms 4 inches. Size of bed 48x72 inches. Golden oak, polished finish. Castered. Long Davenport style, covered with black Besto leather. A good $27.00 value. Sale price $19.00.

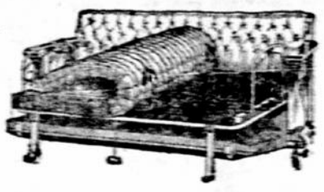
No. 200. Short Davenport. Style construction is the same as No. 300 except it is the Divan size and does not take as much room in the home. A good $26.00 value. Sale price $18.00.

Interior construction of all the Hulsco Davenports, backs, frames and slats are all steel aluminum finish.

No. 18. Turkish Besto Leather Couch. Plain top, corded edge, spring edge sides. Cotton top and over moss filling. Quarter sawed veneered oak frame. Size 28x74 inches. Castered. Made with plain top only. A $16.00 value. Sale price $12.50.

No. 1. Velour Covered Couch. A special value at $6.00.

No. 10. Besto Leather Couch. Plain top, well supported with springs; 27x72 handsome quarter sawed oak frame. Castered. A good $9.50 value. Sale price $8.00.



POINTS OF SUPERIORITY
of the DAV-EN-O Over All Other Combinations

1. A really good bed spring.
2. A thick mattress instead of a pad.
3. Holds all bedclothes, even to pillows, made up ready for use.
4. Plain seat which will not wrinkle. Covering wears twice as long.
5. Removable upholstery — perfect cleanliness.
6. Quickly and easily assembled.
7. Steel frame construction instead of wood, which would warp.
8. Positively guaranteed never to get out of order.
9. Absolutely sanitary on account of "knockdown" metal construction and all removable parts.
10. Head and foot rails to keep pillows in place.

No. 2010. Daveno. Golden oak finish, colonial design, plain seat and back, covered with Spanish imitation leather, tow over moss with felt top, a good $36.00 value. Sale price $29.00.

No. 2000. Daveno. Golden oak finish, plain design, plain seat and back, covered with Spanish imitation leather, tow over moss with felt top, a good $31.00 value. Sale price $26.00.

Other Davenports in leather up to $65.00.

OUR AIM AND MOTTO IS TO PLEASE THE PEOPLE ALL THE TIME AND IF YOU WILL TAKE THE TIME TO COME AND LOOK OVER OUR STOCK WE BELIEVE YOU WILL SAVE MONEY AT THE TIME YOU NEED IT THE MOST IF AT ANY TIME OF THE YEAR.

WILL DEMONSTRATE CARE OF ORCHARDS

Spraying and Pruning of Fruit Trees Will be Shown at White Elk Vinyard on April 12.

AMES EXPERT COMING

Apple Tree Will be Selected by the Crowd and it Will be Used as Model—All Tree Men Invited.

Announcement is made from the Iowa State College of Engineering at Ames that there will be held in R. L. Mygle's White Elk vineyard orchard near Keokuk on April 12, commencing at 1:00 p. m., a pruning and spraying demonstration by a member of the agricultural extension department of Iowa State college, Ames.

Iowa produces fruit of maximum quality when nature is assisted by three fundamental principles of orchard management; namely, pruning, spraying and cultivation.

Out of 202 farms visited in June, 1914, in Iowa there were 137 orchards. Out of this number 60 orchards or 44 percent were pruned occasionally; 10 or 7 percent sprayed annually; 23 or 17 percent were cultivated. It is believed that these figures are quite representative of conditions throughout the state. Is it any wonder then, that the average orchard does not pay?

Many farmers would be willing to prune and spray their orchards if they knew how and when the work should be done. Perhaps the average orchard in Iowa is neglected more than any other one thing connected with the farm. Every farm in Iowa should have a good cared for home orchard on it.

Crowd to Select Tree.

Tell your friends and neighbors about the pruning and spraying demonstration. An apple tree, selected by those present, will be pruned and reasons given for making such and such cuts. The time of year for pruning will be given. Every phase pertaining to orchard tree pruning will be discussed such as high and low headed trees; spreading and upright growers; cutting and heading back; dehorning; winter and summer pruning; girdling, etc. If possible, grape pruning will be demonstrated.

The subject of spraying will be discussed and demonstrated as far as equipment at hand will permit. This phase of orchard management is in itself perhaps the most important subject pertaining to orchard management. The important insect orchard pests and diseases of this locality will be discussed and also the best sprays for their control.

The school children, especially the high school students, are especially invited to attend this meeting. The cost for the meeting will be very small and the traveling expenses will be prorated with other places.

Come to the demonstration and help place the orchard, either for home or commercial, on a better paying basis.

ALLIES HOLDING SMALL PORTION

(Continued from page 1.)

ports remain, and there is not even a customs port on all her borders where goods pass through save those ports alone upon the French and German borders where war munitions and supplies for contending armies are pouring in. Belgium's trade is no more; her industry is no more; her mining is no more; her cities are foreign soil; her schools, her four universities at Ghent, Liege, Brussels, and Louvain are no more; her capital is lost; her farms are gone—Belgium, herself, is almost non-existent as a concrete thing."

CHARGE BAYONETS IS NOT JABBING

(Continued from page 1.)

trenches the No. 1's are reinforced by the No. 2's who clear the whole distance with one charge and then the final assault is made."

"I still don't see how your picture differs from the artists' pictures," the Red Cross nurse observed.

"It's like this," explained the colonel. "Sometimes when the No. 1's get about half way the enemy's fire becomes so hot and so many of them are killed that the remaining soldiers are ordered to retreat to the trench they have just left. In so doing, of course, many more are killed but still this is better than to continue to certain death for all. But when the charge is a success, when the No. 1's reinforce the No. 1's and all dash forward with their bayonets gleaming, the enemy almost always break and run before there is any actual collision. If the enemy cannot leave the trench and make a dash for safety, he usually holds up his hands and is taken prisoner. For you see if the charge is a complete success the men in the trenches, in a hand to hand fight with bayonets, haven't much of a show with the fellows standing over their heads. They know they haven't much chance so if the charge bayonets proposition goes through to the finish the game's up before the bayonets actually transfix the men's bodies.

"Sometimes, though, odd things happen. Not long ago the English near here charged the German trenches and made it. When they got to close quarters they leaped down into the pits, threw their guns away and began to fight with their fists for all they were worth. The English won, of course, for no European can handle his mits like you Americans or the English."

The American Red Cross girl didn't ask any more questions. One by one the beautiful illusions she had conjured up were fading away. Instead of "Come on boys, follow me!" and other poetic words from the mouths of men as they swept forward against the enemy, it was more like "Oh hell! More work!" Instead of dashing forward, waving a sword, one dug one's way along with a soup-spoon and crawled like a worm. From the look on her face the girl wanted to resign and go home.

KAISER'S ATTEMPT TO BE CONCEALED

(Continued from page 1.)

anything else though, is that in spite of all of these supposed secret precautions and which they know in detail, the kaiser is still not content to pass the night in this house. The moment darkness falls, his automobile calls, and with all lights extinguished, he is flitted away to a villa near Virginee-au-Bois, some fifteen kilometers distant. Domestics in automobiles of their own, preceded the kaiser and see to it that the road is absolutely clear. The house in which the kaiser finally passes the night is known as the chateau du Stutou which was formerly used for wild boar hunters. Here he is declared to feel perfectly safe and early in the morning, the automobile calls and takes him back to the headquarters of the general staff.

Never is there a moment of the night or day that the French army does not know just where the kaiser is and is reasonably certain in guessing just what he is doing. Now that it has made public all the details of the kaiser's daily routine when he is not personally supervising the campaign against France, the latter is wondering if he will either become alarmed and refuse to come any more or if he will merely abandon his precautions as useless.

DISEASE WINS FOR THE ALLIES

(Continued from page 1.)

omers are having a fairly good time. They have the "freedom" of some fifty acres of park and can fit up tennis courts, gymnasiums, etc., (at their own expense) and only the miles of barbed wire entanglements, and the huts and tents of the military guards, serve to remind them that they are not guests at a famous ancestral hall.

Most of the ground floor of the castle is devoted to the dining room, writing room and smoking lounge. The dining room is a beautiful room with carved oak panels and a carved and polished elm ceiling. The family furniture has been mostly withdrawn, but that substituted for the prisoners' use is comfortable if plain. In the writing room and lounge there is a good deal of luxury. Deep and softly upholstered wicker chairs are provided, and there are soft rugs on the beautiful parquet flooring.

On the first floor are the bedrooms, which owing to the spaciousness of the rooms have had to be fitted up as dormitories. With the exception of the largest rooms, however, not more than eight beds are to be found in each room, and each is equipped with comfortable spring mattress, and plenty of bedding. Each prisoner has his own washstand and dressing table, with enamel toilet ware. Six bath tubs with hot and cold water always on and a shower bath are provided. There is also a medical ward, with a doctor in constant attendance. Electric light has been installed and all the apartments are nicely warmed.

The life of the prisoners depends largely upon the amount of money they possess. Ancient food is provided, but they may supplement it as they choose and there is a canteen where they can obtain wines and spirits, etc. Remittances can, of course, be sent them from Germany. Their meals are served by the captured soldier-servants, who thus escape the monotony of the concentration camps provided for the enlisted men. Even the latter have, in many cases, have more comforts than some of the new armies now undergoing training in England.

LAUNCH MEN WANT SMALL DAMS OUT

Burlington Owners Are Active in Getting These Obstructions Taken Out of the River.

Because the Keokuk dam at Keokuk has raised the water, and made a lake out of the river, there is no further need for the small dams which have been built in the river, the Burlington launch owners think. They want them taken out. The Hawkeye has the following concerning their views on these dams:

The launch men, or some of them, are again calling attention to the fact that the numerous dams, which the government has planted in the Mississippi river here, are of no possible benefit to any one. On the other hand these dams are a menace to navigation. They are a nuisance and they should be abolished. Several years ago, the launch owners had come to the conclusion that something ought to be done in this matter and they tried to interest the Commercial Exchange. That body seemed willing to look into the question. But then the Citizens Water company, through one of its representatives, explained that there was need of those dams, as they enable the company to furnish Burlington better water than would be possible without these structures. That was before the dam at Keokuk was constructed. At that time, the Mississippi was a river here with a comparatively swift current. Times and conditions have changed. It is a lake now, and there is no further use for the dams. Many a launch owner has had unpleasant experiences with and on account of these dams. They are of no possible benefit to navigation here, and that was the reason for their coming into being. It seems as if the government engineers, who have charge of this section of the river, would agree to the removal of these dams, if their attention were called to the matter. And perhaps they might be able to use some of the material elsewhere, which is now actually wasted. It is quite likely that the Burlington Launch club will again take up this important proposition at an early date, and that an active and untiring committee will be appointed. That being done, it is pretty safe to assure that after the unwinding of unnumbered yards of red tape, something will be done that will prove of real benefit to the river and the people who use it. Of course, it will take time, and before it is accomplished, there may be considerable unprintable language wasted upon the stilly night on account of some of these wonderful dams.

To Remove First Signs of Old Age

"The infallible first sign of age is the sagging cheek muscles," says Mme. Cavallieri, whose fame as a beauty culturist is scarcely less than that of a singer. "These are more difficult and serious to treat than wrinkles," she continues. "The sagging muscles indicate they have grown too weak to remain in place; they must be assisted, strengthened."

The best way to strengthen them is by using a wash lotion made by dissolving an ounce of powdered saxolite in a half pint witch hazel. This creates a freer circulation to the parts, besides causing muscles and skin to contract. Saxolite, procurable at every drug store, has long been known by complexion specialists to possess remarkable tonic and astringent properties, valuable in treating flabby tissue and wrinkles.

LITTLE JOURNEYS TO A MODERN STORE

Through the execution of hundreds of thousands of repair jobs and manufacturing order over a period of nearly fifty years, the Ayres & Chapman store has gathered experience and built a factory and repair department second to none in the state of Iowa.

Factory and Repair Department, Ayres & Chapman

With its power lathes, rolling mills, draw benches, casting dies, sand blasts, plating outfits, gold and silver refining machinery, etc., etc., it has supplied the hurry up needs of the jewelers of five states. This completely equipped plant is now devoted in large part to needs of a large and constantly increasing local patronage, to the manufacture of plain band rings and special diamond mountings and to the repair and rebuilding of broken and damaged jewelry.

This factory is backed by a department carrying one of the most complete stocks of repair materials and accessories in the middle west.

We have lately relieved congestions in our repair department by the addition of new machinery, new electric power lathes and benches and we will continue to turn out all work with satisfying degree of speed and accuracy.

Our prices are the lowest possible, consistent with highest class of workmanship.
