Size according to number of cows. Write for further information

Improve Your Dairies.

FARM BUTTER UNSALABLE.—That this is a positive fact is too well known. Storekeepers all over the country are now actually obliged to turn down FARM BUTTER, because there is no market for it. It does not, as a rule, come up to the standard of the public taste, and ere long it will be impossible to sell anything but Separator butter. As a result of this latest phase of the butter question, some farmers are now selling out their milk cows, which means that they are going backward instead of forward. Ask any successful dairyman in your vicinity what is the secret of his success, and he will tell you that it is attention and care of stock, combined with the use of modern appliances. In other words that he "kept up with the times" Improvement is the order of the age, and you must improve, or, like the farmers mentioned above, you will go backward instead of forward.
