A DeLaval Cream Separator

DeLAVAL BABY NO. 0 SEPARATOR.

The Baby No. 0, of 200 lbs capacity per hour, that is to say, one that will separate 200 lbs of milk in that given time, has now been put on the market by the manufacturers for the sum of SIXTY-FIVE DOLLARS, all complete and ready to run. At such a price, no one with from 4 to 10 cows need go on losing money by dairying under the old wasteful methods; for a 10-cow to 15-cow dairy, the Baby No. 1, with a capacity of 300 lbs of milk per hour is just the thing. For a 15 to 25-cow dairy, we have the Baby No. 2, capacity 400 lbs of milk per hour; over that size, we recommend the Baby No. 3, capacity 700 to 750 lbs of milk per hour. Write us for special descriptive "Baby" catalogue.

Do you run your dairy just the same as your grandfather did, skimming your cream from the old wasteful setting pans? If so, have you ever stopped to consider how much money you might be ahead at the end of the year by studying the improvements in dairying, which are going on all around you, and adopting them in your own dairy? If you have not, we will enumerate some of the advantages of the separator system:

The DE LAVAL BABY SEPARATOR will skim practically all the butter fat from your milk.

You will save thus 10 or 15 per cent of your butter fat which you are now wasting.

You will increase the value of your butter from 20 to 50 per cent, or even more.

It will produce a cream that will gain for you 5 to 10 per cent more butter.

It will save you one-half of the time you now spend in churning.

It will save time and trouble of cleansing your setting pans.

It will give you sweet warm skim milk for your calves or hogs.

It will save you loss and injury to calves, through scouring on sour milk.

It will save all the drudgery now shouldered by your already over-burdened wife.

It will pay for itself, if proportionate to the number of cows you have, in a little over one year.

We Carry a Full Line of Everything Needed in the Dairy.
