Cream Separators

The dairy or farm users of cream separators may well profit by the experience and follow the example of the creamery or factory users of such machines on a large scale.

The difference between a superior and an inferior separator are just as relatively material to the farm user as to the factory user. The amount is not a couple of thousand dollars a year, of course, as it is with the factory user, but it is from \$25 to \$75, according to the quantity of milk, and that means just as much to the farm user. Moreover, a De Laval machine is twice as well made and will last at least twice as long.

Every large and experienced creamery concern in the country is now using De Laval machines and buying them exclusively. Nearly all these concerns have tried various "cheaper" makes of separators and many have cast aside thousands of dollars worth of them. Such facts mean something to every user or intending buyer of a separator—big or little. The differences between small separators are just the same as between big ones.

The De Laval machines can alone employ the patent protected "Alpha" disc system of divided strata separation. They bring standard prices and are made accordingly. In consequence they are as superior to the best of other separators as such machines are to setting systems. The poorer makes of other separators are mere fakes.

A "20th Century" De Laval Catalogue will help to make these facts plain and may be had for the asking.

THE DE LAVAL SEPARATOR CO.

Pacific Offices, Stores and Shops: 103-105 Mission St., SAN FRANCISCO.

General Offices: 74 Cortlandt St., New York.

Branch Offices: Chicago, Philadelphia, Montreal.
