Americanize Your Credits

Credit Insurance, as issued by the American Credit Indemnity Company, gives broad service which brings to manufacturers and wholesalers the following vital benefits:

1—It reduces the credit waste.
2—It affords an accurate basis for costs.
3—It affords superior collection facilities.
4—It increases efficiency.
5—It promotes prosperity by stabilizing business.
6—It distributes the burden of loss and affords an independent reserve fund over and above the capital employed.

The American Credit-Indemnity Company has successfully rendered such service for the past thirty years. In that time we have not only paid over eleven million dollars to our policyholders, but have *prevented* countless losses as well.

Let our local representatives tell you about our Policies, as well as help you with your particular credit problems.

The AMERICAN CREDIT-INDEMNITY CO. OF NEW YORK — J. F. McFADDEN, PRESIDENT
Credit Insurance Exclusively

J. F. HALLWEGEN, General Agent

Successful Speculation

Strange as it may seem your success in the market depends more upon *when* than upon *what* you buy.

The great basic law of Action-Reaction governs both speculative and investment markets mostly as it governs our mechanical and scientific worlds.

Changes within the concern itself cause its securities to fluctuate within a range of the 10 points. These "ripples" cannot be forecast in any way.

Artificial market manipulations are responsible for minor movements lasting for a few days or a few weeks. These "waves" are unnatural, artificial, and are effective only as long as the pressure is kept up. They cannot be forecast in any way.

Changes in the Fundamental Conditions underlying the business world, meanwhile, cause the whole market to travel its regular cycle showing an average rise and fall—a fluctuation of around 50 points. These—the "tides"—travel with almost clock like regularity. They can be forecast with remarkable accuracy.

The Long-Swing Method

The common sense method is evident. Instead of gambling on the ripples—instead betting against the "insiders"—instead of trying to run cross current or countet to fundamental conditions, take advantage of them.

1. Buy at the bottom when fundamental conditions have forced securities far below their true worth.

2. Hold through the rising market in spite of minor movements, rumor, and gossip.

3. Sell out at the top of the broad rise at 30 to 100 points profit.

4. Hold funds liquid during the down swing.

RESULT—You enjoy half again to twice the usual return without the risk, worry or loss involved in ordinary speculation.

The Opportunity *Now*

Certain stocks are at or near the bottom of the cycle and should be purchased at once. Others are rapidly approaching a buying point.

If you are a buyer of stocks and miss this opportunity you may have to wait three to five years for another as favorable.

Send for Booklet—Today

Cotton Is Irregular, With Profit Taking Sales in Evidence

Realizing Promoted by Reports of German Loan Refusal; Market Closes 9 Points Higher to 12 Lower

A disposition to take profits on cotton contracts in advance of the holidays was in evidence during yesterday's trading. Probably it was promoted by reports that there would be no loan to Germany until the question of reparations was settled and the somewhat easier ruling of foreign exchanges. These features, however, were pretty well counter-balanced by the increased spot business reported in Liverpool, reports of a more active demand for cotton goods in the domestic markets and bullish Southern spot advices.

Private ginning figures, claiming to confirm crop estimates of below 10,000,000 bales, were a sustaining influence also, and while early advances were followed by reactions the undertone was generally steady. The general market closed steady, net 3 points higher to 12 points lower, the declines being confined to next crop deliveries.

There were two other private ginning reports, one indicating 9,459,000 bales ginned to December 1 and pointing to a crop of 9,700,000. The other placed the ginning at 9,564,000 bales and estimated this at 98.2 per cent of the total yield. These figures may have contributed to the steady undertone of the market, but the main factors were bullish Southern spot advices and reports of a more active demand for goods. According to local spot handlers it is impossible to secure any shading of the basis in the South, and there has been very little "Christmas cotton" offering this year.

Southern spot markets as officially reported were unchanged to 25 points higher, with sales aggregating over 22,000 bales.

The local market for spot cotton was steady and 10 points higher at 28.20c. No sales were reported.

Cottonseed Oil

There was comparatively little individual feature in the market for cottonseed oil and in the absence of aggressive operations price changes were narrow and irregular, being influenced easily by small orders either way. The near positions were relatively heavier than the late months, closing at 1 to 3 points net lower, while the others were 3 to 6 points higher. Total sales for the day were 3,500 barrels.
