Swift & Company's sales of Fresh Beef in New York City for the week ending Saturday, May 15, averaged 9.46 cents per pound.—*Adv.*

FINANCIAL AND COMMERCIAL.

MONDAY, May 17.

Perhaps the most noticeable thing about to-day's stock market was that transactions in it in stocks were only a little more than 500,000 shares, the smallest volume that has been seen for a considerable time. The market was in fact exceedingly dull, the buying and selling being seemingly of strictly professional order, and as matters of news affecting values were unimportant or at least in no way striking the whole business day passed in an uninteresting fashion. During the fore part of the day the market despite its distinctly lessened activity was strong, there being a continuation of that recovering movement in prices which set in on Friday of last week and lasted throughout Saturday. The upturn lasted until about noon to-day. Then heaviness developed and the market declined rather generally until the close. There was visible the same rather especial weakness in Third Avenue Railroad stock that has been the feature of dealings in the traction shares for several weeks, and for this questions as to the equities of the stock after the consummation of the coming foreclosure sale of the Third Avenue property are no doubt responsible. Consolidated Gas stock after selling at a new high record price on the present movement at the opening of the market declined so that it made a net fall of over two points. Moderate heaviness also prevailed in a good many other quarters. On the other hand the Allis-Chalmers stocks, particularly the preferred shares, advanced sharply in the fore part of the day and the obviously optimistic feeling that prevails regarding the future of the railway equipment business produced a visible effect on these issues. Accumulation of the Erie stocks was not perhaps as noticeable to-day as it was last week, but there is an impression in more than one place in the financial district that the earnings of the Erie company are showing such improvement that it may not be necessary after all for the company to avail itself of the permission recently granted by the Public Service Commission to make an issue of collateral trust bonds.

Saturday's bank statement, with its disclosure of a doubled surplus reserve due to the pressure of Western institutions to lend money here, is a sufficing explanation of the present willingness on the part of bankers in New York to encourage gold shipments. At the moment, although money is easy everywhere over the world, the Austrian Government appears to be in the market for a fairly large quantity of gold with which to build up its national reserves. Agents of this Government bought all the gold in the London market to-day offered from the usual weekly shipments from South Africa, and it is believed that it is to inducements of the same kind that shipments of gold from this country for several weeks past have been due. Triangular operations of the customary sort explain such gold exports as our country has recently been making to South America. The export movement is also facilitated, naturally enough, by the temporarily unfavorable turn given to the country's trade balance by our reduced export trade and vastly increased imports of raw materials since January 1. Inasmuch, however, as it is perfectly well understood that a 4 per cent. or 5 per cent. money rate here would probably suffice to bring gold from Europe in volume the matter is one that is of only academic interest to Wall Street. In the grain markets to-day the price of wheat rose because of further indications of the decided shortage of winter wheat in the country, deliveries of old wheat at the leading interior market having practically ceased. Nevertheless the weather in the last fortnight for this year's crops has been and continues to be so fine that the expectation seems to be general in the trade that lower prices must soon result for the speculative options in corn and other coarse grains; and all these options did to-day decline. Of acute relation to the stock market the matter that has been most discussed in the last three or four days has been the admitted fact that there has been liquidated here and in the London market for the account of two or three large speculators something over 200,000 shares of stock, chiefly of United States Steel common and Union Pacific common, during the last ten days. That such a volume of selling of stocks has occurred and that the absorbing power of the market has been sufficient to meet it with such a trifling decline in prices is proof that the market is essentially a pretty solid affair. The stock thus sold could not now be rebought without advancing prices materially beyond the highest price yet touched this year; and as those who sold it are known to be profoundly optimistic regarding the future of the market in the present year, and especially of the two stocks to which reference has been made, their liquidating sales are looked at by Wall Street in much the same way as the current gold exports.
