FINANCIAL NEWS AND COMMENT

Interest in Stock Market Centres in Fluctuations in Marine.

GENERAL LIST IS HEAVY

Fractional Declines in Most of Standard Rails and Industrials.

Interest in yesterday's stock market converged almost entirely upon the erratic fluctuations in the marine shares, resulting from the unexpected overnight announcement of the Government's desire to purchase the company's ships under British registry. The rest of the market was relatively quiet, notwithstanding there was some special and pronounced weakness in a few descriptions, and in the main held comparatively well in face of persistent selling pressure and a general disposition on the part of traders to liquidate long contracts for over-today's period of suspended animation. The net result of the day's transactions was a fractional decline in most of the standard rails and industrials and some sharp and spectacular improvements in a few shares of the type of marine preferred, which at one time showed a net gain on the day of over 15 points. Nearly half of this was wiped out, however, in the afternoon by profit taking.

The heaviness which characterized the general list elsewhere was distinctly disappointing to those who had expected the trading rally on Tuesday to be extended into yesterday's market. The fact that it was not showed conclusively that the short interest in the market was not as large as Wall Street had generally figured and that a good deal of the stock that had been offered for sale recently represented real liquidation rather than a closing out of professional contracts. As a result the market turned heavy shortly after the outset with the receipt reports of further and more extensive cancellations of war contracts, and a general realization that the end of the allocation of steel contracts by the War Industries Board on December 1 would mean a free and unrestricted market in steel products. This was disquieting to that element which had expected that the supervision would continue for some time, and served to offset whatever encouragement might have been derived from intimations received late Tuesday afternoon that the inequities of the money situation were to be ironed out in the near future. The fact that the restrictions were not taken off altogether was, of course, disappointing, but it was reassuring at least to know that there are still very good reasons why the control should be continued.

Dealings were on a somewhat larger scale than on the preceding day, principally because of the increase in the volume of speculation in the marine shares. In this department there was a headlong rush to cover at the outset on part of those who had gone short at higher prices, and resulted in the opening of the stock at a figure more than 8 points over the preceding day's closing. From this level a reaction set in, which carried the preferred down to 108¼, where new buying came in and the quotation was rushed to a new high for the day of 119½ as contrasted with a closing the night before of 103¼. Thereafter profit taking was indulged in again, and the preferred as well as the common receded along with the remainder of the market on conflicting reports as to whether or not an agreement had actually been reached with the British Government as to the transfer of the ships to American registry. Otherwise it was a comparatively quiet day. Studebaker experienced a sharp decline, as did Mexican Petroleum, Utah, some of the motors, and the steels in general. But aside from these issues the market held fairly well in the face of the selling, with some special strength in stocks like Railway Steel Springs and a few others in which incentive for a rise was provided by purely local considerations.

The money situation was unchanged. Call loans continued to be made on the Stock Exchange at 5 to 5½ per cent., and there appeared to be an abundant supply with very little actual demand. Discussion continued concerning the money restrictions, but with the announcement of the new offerings of certificates of indebtedness it was realized that there are no real indications of any relaxation until the next Government loan is well out of the way at least. The foreign exchange market was quiet. There was some further weakness in Spanish pesetas, but outside of this instance rates remained about unchanged from the preceding day's level.
