STOMACH MEDICINES ARE DANGEROUS

DOCTORS NOW ADVISE MAGNESIA

Just how dangerous it is to indiscriminately dose the stomach with drugs and medicines is often not realized until too late. It seems so simple to swallow a dose of some special mixture or take tablets of soda, pepsin, bismuth, etc., after meals, and the folly of this drugging is not apparent until, perhaps years afterward, when it is found that gastric ulcers have almost eaten their way through the stomach walls. Regrets are then unavailing; it is in the early stages when indigestion, dyspepsia, heartburn, flatulence, etc., indicates excessive acidity of the stomach and fermentation of food contents that precaution should be taken. Drugs and medicines are unsuitable and often dangerous—they have little or no influence upon the harmful acid, and that is why doctors are discarding them and advising sufferers from indigestion and stomach trouble to get rid of the dangerous acid and keep the food contents bland and sweet by taking a little pure bisurated magnesia instead. Bisurated Magnesia is an absolutely pure antiacid which can be readily obtained from any drug store. It is absolutely harmless, is practically tasteless and a teaspoonful taken in a little warm or cold water after meals will usually be found quite sufficient to instantly neutralize excessive acidity of the stomach and prevent all possibility of the food fermenting.—Adv.

THE PULLMAN COMPANY

Women and children form a large proportion of the passengers of the Pullman Company. The safety of the cars, due to their unusually sturdy construction; the sanitary condition in which they are maintained; the numerous conveniences which their equipment affords, and the courtesy of the Pullman employes are all factors contributing to the increased comfort and enjoyment of railroad travel.

In the Pullman car only a limited number of passengers are accommodated; there is no crowding. Operating over practically every railroad in the country, it is rarely necessary for the passengers to change cars from departure to destination. Both of these conditions contribute to the safety and comfort of unescorted women and children.

For fifty years the Pullman Company has directed its efforts to the determination of the needs of the traveling public, and the development of a service to meet these requirements. That twenty-nine per cent of Pullman conductors and twenty-five per cent of Pullman porters have been in the continuous service of the Company for over ten years indicates the high personnel of the employes by whom the service is rendered.
