FINANCIAL COMMENT

Crucible Steel Leads as Shorts in Industrials Endeavor to Cover in Stock Market.

The efforts of an embarrassed short interest in industrial stocks to extricate itself from a difficult position supplied most of the interest to yesterday's stock market. The process could be likened to the refilling of a vacuum, buying orders rushing in as it became clearer than on Monday or the closing days of last week that the short selling of December had depressed prices so far that a rebound of substantial proportions could not be headed off by fresh pressure. As on Monday, offerings of Crucible Steel were rather scanty when bidders wanted the stock, resulting in a rise of more than 10 points at the maximum level of the session and carrying the price to a point 37½ points above the minimum of last month. This stock presented the extreme illustration of the present hardship of the short interest, but independent steel, railroad equipment and miscellaneous manufacturing company shares advanced 1 point to more than 3 points under trading which bore all the earmarks of a hurried bear retreat.

As the market as a whole was irregular, being well sprinkled with moderate declines among railroad issues and slight gains in other departments, little material was produced upon which deductions might be made of the future. Dealings reflected hardly anything of outside events; in fact, there was only a scanty array of news of market import during the business period. Call money again moved downward from 7 to 6 per cent., but it appeared as though this tendency had less effect than the day before to promote purchases of stocks for the rise. The Street has heard so much about the easing trend of money rates that, while the appearance of an actual tone of recession appeared for the first time on Monday, it seems taken for granted that the money market is much more easy than the call and the time rates show. There were reports of time loans at 7 per cent. However, as has been said before, the banking attitude has not yet favored an abrupt decline of money quotations, for the question of money and credit needs in essential lines, including Government transactions, has not yet been solved. The stock market following is not attempting to guess what is going to happen after the task of correcting last month's overdone selling is completed. The fact that stocks have been moving in a highly uneven fashion indicates that the support through purchases of particular issues has not been distributed over the entire market, and one reason for this is undoubtedly the desire of the public to determine the extent to which business is likely to improve in the next few months, and also, it goes without saying, that a great many speculators who overstayed the rising market of last spring and suffered losses are not in a position to take advantage of opportunities afforded by the current price level, opportunities looking ahead for a year or longer.

Sterling exchange advanced briskly at the start of business, gaining about 3½ cents before noon. Then considerable profit taking came along, causing a reaction of a cent, but this was followed near the end of the day by a fresh gain which left the check rate at 3.76, a figure 3¼ cents above Monday's closing rate. Francs were firm and marks disclosed more resiliency than in the upturn of the preceding day, moving from 1.40½ cents to 1.44 cents. A feature of the market was the continued firmness of South American and some of the Far Eastern quotations, which may or may not have reflected an improving tendency of trade conditions. In banking quarters further advances are expected during the next month, although it is believed that the rise of the last ten days has been so rapid as to forecast considerable irregularity in day to day movements.

Cotton advanced early in the day, but headed into fairly heavy selling in the afternoon and closed lower than on Monday. Grain future prices improved.
