FINANCIAL NEWS AND COMMENT

Lower Call Rate Sends Stocks Forward—Industrial Issues Active.

A decline of the call loan rate from 7 per cent. to 6 per cent. on the Stock Exchange, reaching a quotation not seen before in the official market since January 20, and an early advance of sterling exchange helped to impel stocks further forward yesterday. The lower money rate clearly brought out considerable buying of the industrial issues, which had been lagging during the fore part of the market session, for after the announcement prices immediately gained ground and the business turnover increased. It was a rather dull market, nevertheless, and little trading was in evidence outside of professional operations. Stocks have acted this week as though they were feeling their way along, disclosing timidity whenever developments have appeared of a possible unfavorable import. But it speaks well for the underlying factors affecting the share list that such news as came from the iron and steel trade yesterday could not impair the steel company stocks. Buying, the *Iron Age* reports, is dropping below one-fourth of the country's steel producing capacity. The Steel Corporation's activity has declined 10 per cent. in the last week and indications are "that iron and steel making will be gradually receding for the next few weeks," says that periodical. The trade holds, however, that the present period of dulness will mark the limit of readjustment whence a healthy demand will spring later on.

Reactions of particular stocks during the morning were reflective in numerous cases of statements of earnings for 1920. The speculative community has had its ideas elevated to such lofty levels by the extraordinary profits of war years that results in a year of partial business reaction are not altogether palatable. A net income equal to more than $18 a share of common stock, such as the Pressed Steel Car Company reports for 1920, certainly is nothing to become disgruntled about, but the market referred to the $27 a share earned in the year before, and the shares were pressed down. Reaction of a similar derivation occurred in Baldwin Locomotive, which was followed by a recovery. There were annual statements among the day's unusually large output which showed really unfavorable results, including an operating loss by the National Cloak and Suit Company, and these cast a damper on business that lasted until after the easing of call money. In the afternoon rise of large fractions to more than a point in active issues the rails were prominent, aided by news that the Interstate Commerce Committee of the Senate had passed favorably on the Winslow bill providing for partial payment of moneys owed the roads by the Government. The Street is waiting with considerable anxiety for final action on legislation to supply the carriers with funds to which they are entitled, and failure to complete a statute at the present session of Congress would have an unfavorable effect on sentiment toward the rail shares.

While sterling rose three-quarters of a cent in the morning to 3.91½ for sight drafts, there was a reaction later, a movement not surprising in the light of the recent sharp rise. Francs were firm and somewhat more consistent in dealings than sterling, while marks were in larger demand than on the day before. The market had few offerings of commercial bills on any European centres, which again raised the question whether a fall of exports rather than an active demand for exchange was the more important influence in the week's rise. Silver reached down to 34 pence an ounce in London, the lowest point in nearly five years.

Wheat receded 3½ to 4 cents a bushel in the futures market as purchases became lighter than on Tuesday. Cotton also receded.
