The corrected reading of the barometer (reduced to sea level) at New York on Wednesday, Nov 9, 1921, at 8 AM, as reported by the United States Weather Bureau, was thirty and twenty-eight hundredths (30.28 inches), closely approximates seven hundred and sixty-nine and one-tenth (769.1) millimeters. Captains of all vessels now lying in or near the ports of New York and Brooklyn can advantageously use the above official data for observing whether their own barometers require any considerable correction or adjustment.
