The corrected reading of the barometer (reduced to sea level) at New York on Saturday, Dec 3, 1921, at 8 AM, as reported by the United States Weather Bureau, was twenty-nine and eighty-six hundredths (29.86) inches. This closely approximates seven hundred and fifty-eight and four-tenths (758.4) millimeters. Captains of all vessels now lying in or near the ports of New York and Brooklyn can advantageously use the above official data for observing whether their own barometers require any considerable correction or adjustment.
