FINANCIAL NEWS AND COMMENT

All Signs Point to Larger Production and Sale of Goods This Year.

EVENTS ABROAD IGNORED

Confidence in Business Augmented by Treasury's Action on Victory Notes.

Figures and facts are sufficient to show that, barring unforeseen handicaps, the production and sale of goods will be larger this year than in 1921. The basic industries all point that way, even allowing for the problematical extent of foreign purchases of materials in this country. Railroad car loadings, which supply an excellent measure of distribution, have been running ahead of last year's weekly totals pretty steadily since last December. The daily average of pig iron manufacture in February was nearly 10 per cent. larger than January's and the largest for any month in a year. A number of furnaces were put into operation after several weeks of idleness, signifying that the current demand supported expectations that spring business would expand. Steel mills last week held abreast of their late February ratio of 55 to 60 per cent. of their capacity, compared with 40 to 50 per cent. in January and 20 to 28 per cent. last July.

These evidences of business growth have been considered of more importance than any other developments this year, excepting, perhaps, the trend of money rates, foreign exchange and farm products. But these last named factors have supplemented the other influences in strengthening the industrial outlook and have not had a detached bearing of their own upon the situation. Low money rates mean that manufacturers can finance their requirements when the need arises, without making costs absorb profits on the scale they did in the monetary stress of early 1921. The rise of foreign exchange makes easier the way of foreign buyers in our markets, as their money goes further than six months ago.

Rise in Farm Products.

The rise of 25 to 40 per cent. in values of grain and other products of the farm has added probably $200,000,000 to $250,000,000 to the market worth of such goods over the value they represented at the quotations of last November. Not only has the upturn increased agricultural purchasing power, but it has created renewed confidence among producers that their crops will command good prices next autumn and winter.

The outlook at home has appeared sound enough lately for the markets either to ignore the outstanding events abroad or to view them placidly. Political troubles which Britain has been contending with are examined in academic fashion when domestic business is looking up. The refusal of the United States to enter the pending conference of nations at Genoa, which when first proposed after the armament conference aroused wide hopes in many breasts, is received by the markets with rather remote interest when the manufacturing outlook is improving. A reaction of 10 cents a pound sterling at New York is scanned as a bit of proof that speculators sell out after accumulating large paper profits; it is not viewed as a sign that any impairment has occurred in the international trade and monetary situation.

Confidence in affairs at home was aided last week by the Treasury Department's decision to replace as many as possible of the Victory 4¾ per cent. notes with new four year notes bearing the same rate of interest. This was the second important step in the program for spreading out broadly the great Government maturities of the next few years. The advance of the Victory notes in the market upon this announcement showed that many owners were more than willing to make the exchange, and it seems certain that by the due date of the $3,000,000,000 of paper on March 20, 1923, there will be relatively few notes to pay off in cash.

Problems Wisely Handled.

The way the short dated issues have been handled this year shows that wise consideration of money market reflexes is held in Washington. If the program is continued to the end there should be no convulsions of money rates and an overextended Government security market in those future years when business demands upon credit promise to be heavy.

The full import of foreign events of last week cannot be determined until they have come to their conclusion. The refusal of our State Department to take part in the Genoa meeting was not disturbing to financiers because it had been pretty well forecast by what was happening overseas. The news dispatches from the first announcement of the plan indicated rather plainly that Russian Soviet representatives would have much less of economics to discuss than world politics tinged with their ideas, and intimations were strong that Germany's chief purpose would be to put measures for relief from her reparations obligations ahead of everything else.

The public did not need to wait for the State Department's note to determine that politics would so far dominate the counsels that " United States could be of little use in the meeting. By the time a really beneficial conference to consider what shall be done to aid in the world's economic stress can be arranged the foreign exchanges will have done much to help the situation. They have shown few signs of reaction of a prolonged extent, despite the recession of last week, and that means much for the underlying status of commerce and trade.
