FINANCIAL NEWS AND COMMENT

Calm Response of Stocks to Freight Cut Proof of Improved Conditions.

CAR LOADINGS GAINING

German Loan Plan and Reparations and Rate Ruling Hold Street's Attention.

The calm reception accorded by the security market to last week's 10 per cent. freight rate reduction, ordered for July 1, was clear evidence that the railroad and general business outlook has improved measurably this year. One could conceive of a sharp fall of rail stocks and a reversal of bond prices if the Interstate Commerce Commission had made a similar decision in November or even in March. The expectation of compensating wage reductions for the near future probably helped to stabilize sentiment after the rate news appeared, but the more important factor was knowledge that railroad traffic was expanding. Leaving aside the coal movement, the weekly car loadings of the last two months have displayed a really remarkable recovery of the business turnover. With the best traffic months of the year lying ahead, the most recent records seem to forecast an enlargement of bulk which always goes far in counterbalancing low rates on particular units of freight classifications.

A picture of railroad freight conditions can be obtained by referring to records of several weekly reports on car loadings. Gains have not been altogether consistent or uniform, but they have been fairly steady from week to week since October. In the last week of January, before the growth of steel buying drew attention to the general business structure, all sorts of freight loadings were 6 per cent. greater than they were in the corresponding period of 1921. Taking weekly reports at random, the American Railway Association's figures showed that in the week of April 15 cars loaded with merchandise, largely manufactured products, were 68,191, or about 11½ per cent. more than those of a year before.

Coal Loadings Fall Overcome.

In the week of April 29 they were 81,889 more than they were in the corresponding week of 1921 and 18,631 in excess of the number reported for the week of April 22. The April results disclosed, naturally, heavy declines in coal car loadings from the 1921 record, because of the strike, but in the week ended on May 13 a decline of more than 50 per cent. in coal traffic was overcome by increased movement of other freight, all loadings being 21,610 cars larger than they were in the corresponding week of the preceding year.

More manufactured goods, more live stock, building materials, grain and other products, except coal, have been moving into consumption than in the first half of 1921. That recovery is in keeping with events after other great periods of business depression, but it is more impressive this year than it was in 1908 and 1895 because domestic demand for goods is larger, proportionally, to the whole demand than it was in earlier years, when Europe, Asia and South America were active buyers in American markets.

In the light of traffic movement and outlook the Interstate Commerce Commission's ruling that 5¾ per cent. income on railroad investment is to be aimed at through the rate schedule becomes academic. Holders of rail stocks have no assurance that that percentage of itself would strengthen their investment position because roads fell far short of earning the theoretical 5½ per cent. (and even more theoretical 6 per cent.) of the Transportation act in its two years of application to them. In one month of this year class 1 carriers came close to earning at the rate of 6 per cent. If there had been a normal movement of coal in April probably they would have come close to it again and the May result would have been improved substantially by that factor.

Wage Accounts Less Topheavy.

The holder of railroad stock or bonds is less interested in a fixed income on his property than he is in the ability of that property to be maintained in the highest state of physical condition at the same time that a reasonable return is had on the investment. The way in which many of the railroads have been forced to skimp maintenance, hold back extensions and limit the number of cars and locomotives in the last year and a half shows that something has been wrong somewhere. An examination of their wage accounts shows pretty clearly what that something is.

The financial interest of last week was divided between the freight rate ruling and the international banking conference held in Paris. Although the news from that conference was meager the most satisfactory item was the evident eagerness of all participants, including the German representatives, about the principal subject in hand. That was the projected German loan with its appended matter, the reparations bill. Many bankers in New York expect that a loan will be shaped and will meet with a good reception among investors in many countries, provided that Germany shows that she is ready and willing to assume the burden. It is apparently less a market problem than it is a problem of the borrower's attitude.

OFFER NASHVILLE BONDS.

A syndicate composed of Sassongood & Mayer and Caldwell & Co. is offering a new issue of $248,000 of the city of Nashville's 5 per cent. bonds, dated January 1, 1921, and to mature in January, 1923, to January, 1961, inclusive, to yield 4.40 per cent. Nashville's valuation for 1921 was $114,872,801 and her net bonded debt is $8,850,533.
