GENERAL NEWS OF INDUSTRIES

In the opinion of the Philadelphia Stockholder "no coal combination can be formed, and be successful, unless it includes the Reading, the Lehigh Valley and other prominent interests. It could not be successful even if every anthracite coal producing company in Pennsylvania should combine against the Reading. The latter is a too powerful factor in the trade to be ignored. It can, without assistance, flood the market to the extent that prices would be a secondary consideration. Of course, it could not live through such a war, but neither could other companies. It would drive them all to the wall, and it is safe to presume that the interests which control these properties are not likely to have such disaster occur at this or any other time." If the Pennsylvania Railroad company would listen to reason and do its share toward observing restrictive requirements, there would be little or no question of the attitude of the other carrying companies. If our Philadelphia contemporary be sincere in its solicitude for the welfare of the anthracite interests it will not overlook the stubborn and hurtful policy of President Roberts.

* * *

The Jersey Central is fast ascending into the ranks of the leading carrying corporations of the state. On Tuesday, says the Hazleton Standard, they placed an order with the American Manufacturing company for 3,500 thirty-ton gondolas, equipped with the Janny coupler. This vast number will be equal to 10,500 small "jimmies," and will have a total capacity of 105,000 tons of coal. The new gondolas will be of greater width and length than the twenty-five tonners now generally used. With the introduction of the new and improved gondolas the days of the coal hoppers are at an end. As fast as they are taken to the shop, if it is thought that the expense to repair them will be very great, they are burned up for the iron they contain. The companies in general are anxious to abandon their use, because they are not fitted to be coupled and braced in between gondolas. They are so light that the danger of them jumping the track is a constant dread to train men, and it will only be a few years until they are entirely destroyed.

* * *

C. C. Waite, president and general manager of the Columbus and Hocking Valley road, says business on the Columbus and Hocking Valley road has been very satisfactory the last few weeks, the coal movement over the line, which is one of the chief features of business, having been very heavy. What business would be in the next few months Mr. Waite thinks depends largely on what turn business generally may take. Stocks of coal are light all over the country, and should the manufacturers become busy it will mean a heavy coal traffic through the fall and winter. This, of course, refers to bituminous coal.

* * *

A mathematician of the New York Press has been doing some interesting figuring, with this result: Editor Saward, of the Coal Trade Review, says that New York burns about 6,000,000 tons of anthracite and bituminous coal every year, and his authority is unquestioned by the trade. He says further that every ton of coal contains, on an average, about one cubic yard or twenty-seven cubic feet. At that estimate a pile of coal big enough to feed the thousands of fires burned in the metropolis for one year would contain 162,000,000 of cubic feet. Possibly these figures fail to carry any meaning, but some notion of their magnitude will be gained when it is understood that 162,000,000 of cubic feet would fill a bin 80 feet wide, 40 feet deep and 50,625 feet long, and that if the bin were set down in Broadway it would reach northward from the City hall the whole length of the street and along the Boulevard away up to One hundred and Sixty-seventh street. In some parts of the street there would be room for carriages, trucks and foot passengers by the side of the bin, but in other parts the thoroughfare would be filled from building to building. This enormous coal bin, emptied out and piled up on Washington Square, would make a pile beside which the Eiffel tower even would hide its diminutive head, and the great Washington monument would look like a moderate sized post. This square is 900 by 450 feet, as stated above, and 6,000,000 tons of coal piled upon its area would tower up rather more than 1,200 feet into the air, so high that the Eiffel tower, which is a shade under 1,000 feet, would need to be raised nearly the height of Trinity church steeple (289 feet) in order to reach the top of the pile.

* * *

MINOR INDUSTRIAL NOTES:

The Dry Fork railroad, running from Wharton to Hendricks, W. Va., a distance of thirty-five miles, will be opened Oct. 1.

Work on the Lattimer extension on the electric road is considerably delayed owing to the inability of the company to secure the prompt delivery of steel rails ordered.

The Reading Fire Brick works resumed operations Wednesday after having been idle for several months. Large orders are coming in, and trade prospects are brightening.

The old Lehigh Valley story that Governor Pattison will succeed President Wilbur is revived, with the addition that Mr. McLeod will become general manager.

Part of the recent buying of New England is said to have been based on the fact that the company had given orders to increase its rolling stock, taken to indicate that busines is improving.

The New Castle tin plate companies have posted notices notifying their men of a reduction of from 20 to 25 per cent. in wages. The managers say they cannot pay the old wages under the new tariff law.

Samuel Tinner, who for a few years has been assistant mine foreman at No. 2 Stockton for Linderman, Skeer & Co., is now employed as mine foreman for Van Wickle & Co., at Bearwater, Schuylkill county.

Andrews & Hitchcock, iron manufacturers of Sharon, Pa., have begun the erection of an immense blast furnace at Hubbard, O. The furnace when completed, will be the largest in the Mahoning and Shenango valleys.

The larger portion of the puddling department of the South Tenth street mill of the Oliver Iron and Steel company, at Pittsburg, is idle through the discharge of a large number of puddlers and helpers. The only men at work in the puddling department are those who took the places of the puddlers who struck a short time ago.

The Pennsylvania Railroad company has issued on the Camden and Amboy division for all departments to resume work on eight hours's time six days a week. For the past thirteen months the shipyards, machine and car repairing shops have only worked eight hours a day five days each week, while the trainmen had only worked half time.

A big change is about to be made at the Central car shops at Phillipsburg. During the past year and more men and machinery have been removed from the works to Hampton, N. J. The shops formerly employed 125 mechanics, while now only about sixty are employed. It has been decided to move the entire plant at Hampton to Phillipsburg, leaving only enough men and machinery at that place for necessary repair work.

FINANCIAL AND COMMERCIAL.

Stocks and Bonds.

NEW YORK, Sept. 20—The important movements in the Stock market today were the sharp size and activity in Chicago Gas and American Sugar. Chicago Gas has been sold of late on rumors that something unfavorable was about to develop to the property. The bears started off by forcing Chicago Gas down to 67¼c., but their advantage was short-lived and after the first hour they were compelled to act on the defensive throughout. Finally the stock sold at 71⅝ and closed at the top notch, a gain of 3⅝ for the day. Sugar declined ⅝ to 95¼ at the opening, but the punishment meted out to the bears in Chicago Gas alarmed the shorts in Sugar and in the late trading there was some heavy buying of stocks put out early in the week. The price in consequence rose to 97¼. The railway list, after a slight decline at the opening, displayed more firmness. The market closed firm with the active railway stocks ½ to ¾ per cent. on the day. Sugar gained 1½ and Chicago Gas 3⅝ per cent. Total sales were 180,473 shares.

The range of yesterday's prices or the active stocks of the New York stock market are given below. The quotations are furnished THE TRIBUNE by G. du B. Dimmick, manager of William Linn Allen & Co., stock brokers, 412 Spruce street, Scranton.

Quinsy troubled me for twenty years. Since I started using Dr. Thomas Eclectric Oil have not had an attack. The Oil cures sore throat at once. Mrs. Letta Conrad, Standish, Mich., Oct. 24, '83.

An Enemy of Tobacco.

"Oh, papa, see the pretty humming bird!"

The object at which the child pointed was poised above a big white flower on rapidly agitating wings, robbing the blossom of nectar with its long beak.

"That is not a humming bird, pet," said the gentleman who sat on the porch in the gathering dusk of evening. "It is a hornblower moth. Once upon a time it was a big green caterpillar."

"A caterpillar, papa?"

"Yes, dearie. The insect which looks so like a humming bird, as you say, is an enemy of my own, because it destroys tobacco. Perhaps I would not have had to pay so much for this cigar I am smoking if there were no such moths in existence."

"But the moth does not eat tobacco, papa."

"No, my dear, but it lays eggs that hatch out into caterpillars, and the caterpillars feed on the tobacco leaves. There are plenty of them over in Maryland and Virginia, and the planters have to fight them constantly. The moth deposits its eggs on the leaves and the new born worms eat holes through them, which render them useless for making cigars. When they are full grown they are about three inches long. They are bright green with small red heads and are very fat and unpleasant."

"What becomes of them after they get big?"

"Oh, they keep on eating as long as they are growing, gobbling up whole leaves and plants, and after shedding their skins a few times they burrow into the ground and stay there quite torpid for awhile. Then they come out of the earth in the shape of great moths, such as the one you saw a moment ago. After that they do not care to feed upon tobacco leaves any more, but they live on the juices of flowers, particularly on those of the honeysuckle and a plant called the 'Jamestown weed.' They extract the honey from the blossoms by means of a flexible tongue five or six inches in length. When they are not feeding the tongue is coiled up like a watch spring under the head. Pretty soon they lay their eggs on the tobacco leaves and then die."

"But what do they do to kill them?"

"A favorite way of the planters over in Maryland is to plant the Jamestown weeds in the tobacco fields and put in each flower a little black arsenic or other poison. Then the moths come along, feed on the poisoned honey of the blossoms and die. Men go through the fields also and kill the caterpillars by pinching off their heads. If such measures were not taken the insects would destroy the tobacco crops."—Washington Star.

"Making Up" with a Prince.

The following story would seem incredible if my father had not heard it from an eyewitness. When Colonel Lennox, afterward Duke of Richmond, called out and nearly shot the Duke of York, the indignation of the royal family and their friends was extreme. After a time, however, the prince regent forgave the audacious duelist and quite unexpectedly asked him to dinner. A large party was awaiting the arrival of their royal host when, to their amazement, Colonel Lennox was announced.

Being received with silence and cold looks he resolved to mark his sense of the courtiers' disapproval. So he laid down two chairs side by side on the floor and leaped over them. Being a man of singular activity, he repeated this little comedy after laying a third chair over the first and again after laying a fourth on the second and again after laying a fifth on the summit. At this last jump, however, his foot caught the topmost chair and the pile was scattered over the floor.

At this moment the prince entered the room, and in astonishment asked the unseasonable athlete what on earth he was about. "Really, sir," replied the unabashed visitor, "it is most unfortunate. No one spoke a word, and I had to amuse myself; but I sincerely hope that none of your royal highness' chairs is broken." The prince laughed, and the matter blew over. "No one but a thorough gentleman," said my father, who used to pronounce this word with a peculiar emphasis, and to employ it in a somewhat narrowly exclusive sense, "could have carried the affair off as Colonel Lennox did."—L. Tollemache in Fortnightly Review.

The Snub Nosed Little Man.

The poor little woman was traveling from Baltimore to Chicago with six small children. Three of them were ill and she had her hands and lap more than full. Every one in the car tried throughout the day to do what they could to alleviate her sufferings. A kindly old gentleman played with the not too inviting two-year-old, and a jolly commercial traveler kept the wiggling and inquisitive oldest boy as quiet as possible with stories of his own boys at home. Dainty ladies opened well stocked traveling bags to the many necessities of the little brood, and the traveling public seemed disposed to show its utmost kindliness to the overburdened woman.

The only person who showed no interest was an insignificant, snub nosed little man who sat in the back of the car and read newspapers. At last bedtime came, and the porter made up a couple of sections in which the tired mother might bestow her offspring. When they were safely settled, the passengers were rendered almost speechless by the conduct of the little snub nosed man, who skulked down the aisle and crawled into the berth where the woman was hushing a wailing child.

When it dawned upon them that he was the husband and father of their proteges, it took all the persuasion of the cooler headed to prevent an immediate mobbing. —Kate Field's Washington.

The Way to Eat Bread.

"I believe the American is the best eater in the world," said Robert A. Howard, of Baltimore, "as he is also the best fed man. He knows what is good to eat and how to cook it and combines in his menu the best dishes of all nations, but with all that he is woefully deficient in his eating in one very essential respect, and that is he persists in slicing his baker's bread as he does a pound cake. On a recent trip to Europe I noticed that the Frenchmen never cuts his bread, and the man who applies his knife to a loaf in a French restaurant or hotel is at once set down as ill bred.

"The Frenchman always breaks his bread and pulls it to pieces instead of slicing it as we do. There is excellent sense in this custom, too, as I have found, for baker's bread, eaten as the Frenchman eats it, is undoubtedly sweeter and tastes much fresher."—San Francisco Argonaut.

Expensive Paintings.

The costliest paintings of modern times are Meissonier's "1814" and Millet's "The Angelus." M. Chauchard gave 850,000 francs ($170,000) for "1814" and 750,000 francs ($150,000) for "The Angelus." Mr. Henry Hilton in 1887 paid $36,000 for Meissonier's "Friedland, 1807," and presented it to the Metropolitan Museum of Art.—New York Sun.

Bucklen's Arnica Salve.

The best salve in the world for Cuts Bruises, Sores, Ulcers, Salt Rheum, Fever Sores, Tetter, Chapped Hands, Chilblains, Corns and all Skin Eruptions, and positively cures Piles, or no pay required. It is guaranteed to give perfect satisfaction or money refunded. Price 25 cents per box. For sale by Matthews Bros.

My physician said I could not live; my liver out of order, frequently vomited greenish mucous; skin yellow, small dry humors on face, stomach would not retain food. Burdock Blood Bitters cured me. Mrs. Adelaide O'Brien, 372 Exchange St., Buffalo, N. Y.

THE GENUINE JOHANN HOFF'S MALT EXTRACT

THE OLD STANDBY

One dozen bottles of the genuine Johann Hoff's Malt Extract gives as much strength and nourishment as a cask of ale, without being intoxicating. It is highly beneficial for use at meal time for convalescents, weak children and ladies, and as a general tonic for the weak and debilitated.

Insist upon the genuine Johann Hoff's which must have the signature of "Johann Hoff" on the neck label. Beware of imitations.

CAUTION: To Our Patrons

Washburn-Crosby Co. wish to assure their many patrons that they will this year hold to their usual custom of milling STRICTLY OLD WHEAT until the new crop is fully cured. New wheat is now upon the market, and owing to the excessively dry weather many millers are of the opinion that it is already cured, and in proper condition for milling. Washburn-Crosby Co. will take NO RISKS, and will allow the new wheat fully three months to mature before grinding.

This careful attention to every detail of milling has placed Washburn-Crosby Co.'s flour far above all other brands.
