The Merchants' Bank of Canada has decided to open a branch in this city on Jan. 1, and Mr. Walter Watson of Morton, Bliss & Co. is to be the bank's agent here.

The Missouri, Kansas and Texas Railway Company has notified the Stock Exchange of an intended issue of $7,000,000 preferred stock.

The following notice has been issued by the Stock Exchange Committee on Securities:

NEW-YORK, Nov. 19, 1874.

In consequence of the appearance of counterfeits of the following described bonds, this Committee direct that the deliveries of Chicago and North-Western Railway first mortgage 7 per cent coupon bonds, dated July 1, 1859, payable Aug. 1, 1885, shall be bonds registered in a name, and not to bearer, as heretofore. Genuine bonds can be registered at the office of the Company. The following are the numbers of spurious bonds so far as has been discovered:

2,294	2,334	2,442	2,668	2,729
2,345	2,343	2,547	2,684	2,786

EDWARD BRANDON, Chairman.

The London Economist of Nov. 7, at which time the Bank of England rate was 4 per cent, and since which the Bank has lost a large amount of bullion, has the following leader on the money market:

The state of the money market is very curious. The value of money is much under the rate of the Bank of England, bills are scarce, and money for short time investment comparatively plentiful. Yet there is considerable discussion, not whether the bank will lower its rate, but whether it may not be compelled to raise it.

The bank return explains this peculiarity. The reserve in the banking department has been allowed to fall £3,829,000, a lower point than it has touched this year, and above half a million less than it was when the rate was last raised to four per cent, because the reserve was then considered to be of insufficient amount, and it was thought necessary to increase it. No doubt the whole state of circumstances is not the same as it was when the advance to four per cent was made. The period of the year in itself makes a considerable difference. The rise to four took place on the 12th of October. We are now arrived at the 7th of November, and between these dates is generally a trying time in the money market; soon after the present time it ordinarily tends to improve. There is generally a reflux of notes and coin from the country from this time forward, which swells the reserve in the bank till and makes the whole market easier. But, on the other hand, the stock of coin and bullion is considered less than it was on 7th October, the week before the advance to four per cent was made.

On the 7th of October the stock of coin and bullion in both departments was	£22,639,000
By last return	21,098,000
Diminution	£1,541,000

And the foreign exchanges are still unfavorable. Gold is ebbing away, and the object for which the rate was raised to 4 per cent still remains unaccomplished.

The German Government have given an exposition of their policy as to the coinage, but as yet only an imperfect telegraphic summary of it has reached us, and as the matter is too complex to be discussed except upon the most accurate data, what the effect of their operations will be is uncertain. But what is not uncertain is that the Bank reserve is very low as estimated by our present standard, that much reduction of it would cause considerable alarm, and that it is still subject to the reducing influence of an unfavorable foreign exchange.

The Philadelphia stock market is dull: Pennsylvania 6s, 111¼; Philadelphia and Erie Railroad, 16; Reading Railroad, 54½; Pennsylvania Railroad, 52½; Gold, 111.
