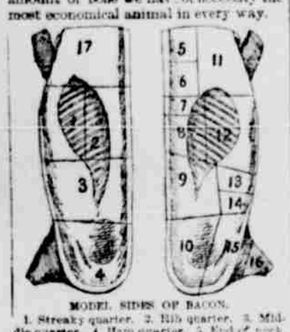
FARM AND GARDEN.

EXPERIENCES AND OBSERVATIONS IN LIFE ON THE FARM.

The Leading Points of a Perfect Pig—Diagram with Accompanying Figure of Model Sides of Bacon—Suggestions for Breeders and Consumers of Pork.

Following are points of a perfect pig: 1. Neat in the head. 2. Light in the neck and shoulders. 3. Deep in the heart and around the ribs. 4. Thick in the loin. 5. Stout in the thighs. 6. Short in the legs. 7. Long silky hair. This type of animal should be aimed at, whether thoroughbred or halfbred or common bred pigs are kept. Large boned, coarse sows are almost invariably deficient in suckling properties and motherly instincts generally, and from their unwieldiness they frequently overlay and crush their young. As size almost always comes from the dam, it is very important that this factor should receive due consideration, and when this size is supported by only just the requisite amount of bone we have of necessity the most economical animal in every way.



MODEL SIDES OF BACON.

1. Streaky quarter. 2. Rib quarter. 3. Middle quarter. 4. Ham quarter. 5. End of neck. 6. Middle of neck. 7. Thick back and shoulder. 8. Prime back and ribs. 9. Loin. 10. Fillet. 11. Shoulder. 12. Prime streaky. 13. Thin streaky. 14. Flank. 15. Middle of gammon. 16. Knuckle of gammon. 17. Fore end.

If carefully studied in connection with the figures underneath it the accompanying diagram will explain more clearly than words the desirability of having certain parts of the hog improved and increased in weight, while the less available parts may be correspondingly reduced, and this without detriment to the constitution or fecundity of the animal. For instance, readers will know that the fore end, marked No. 17, is the lowest priced part of the side of bacon. It is therefore desirable to reduce in weight as much as possible. On the other hand the piece No. 9, the loin, is high priced, and it is important that the weight of this be increased.

It is desired to emphasize what was designated in the beginning as point three, "deep in the heart and around the ribs." Looking at this from the consumer's point of view, a pig which is deep in the heart and around the ribs will of necessity produce a larger quantity of first class bacon, viz., prime back and ribs, prime streaky. This is one of the most valuable parts of the animal and it is therefore desirable to add as much as possible to its weight. From a breeder's standpoint the pig that is deep in the heart and round or well sprung in the ribs will certainly be a good feeder because he has plenty of room for his stomach, liver, heart and all the main organs. A pig that is long in the legs is nearly always flat in the ham and lacking in plumpness. Good hair is an indication of strength of constitution as well as lean meat.

Use for Broken Trowels and Weeders.

Knock out the old rivets. Then level off the lower end of a small broom handle and rivet securely to plate, as shown in illustration. This makes a very useful implement for digging out plants from the center of cold frames, hotbeds, etc., also for lifting plants anywhere in the flower garden. For many uses this will be found much more convenient than a trowel with a short handle. It will stand more prying.

BROKEN WEEDERS AND TROWELS UTILIZED.

It is also of advantage to form a V shaped notch in the end of blade, as it will enable the operator to easily cant on to the plants, and as it prevents slipping when weeding or thinning out plants that are growing close together. This may seem a little thing, nevertheless the extra amount of work accomplished will be considerable in the long run. The foregoing is from Popular Gardening.

FEEDING BOX FOR CATTLE.

A Virginian's Plan for Feeding Cattle and Restraining "Uglies."

A Virginia correspondent writing to Country Gentleman gives the following illustrated description of a feeding box for cattle. He says:

A GOOD FEEDING BOX.

As I soil my cows I have been annoyed with racks and other devices where one or two master cows would keep away all the weaker ones until they could fill up and walk off. From the box here illustrated four cows can feed at a time and neither reach the other, as they stand at opposite corners. By laying a 15-foot pole at each corner, fastening the larger end to the top of the box, and letting the smaller end rest on the ground, a practical stall is made for each cow, restraining the "uglies" from going around so often.

The boxes are 5 feet high and 6 feet square; have no bottom, and are cleaned by turning them over. The materials are scantling 2 by 4 inch and 20 feet long; for the sides, inch boards 6 inches wide and 12 feet long; and for the braces, 1½ inch boards 8 inches wide and 16 feet long. These cut without waste, giving six 6 inch strips on each side. Similar boxes have been illustrated before, but this one has an improvement in the top bar which prevents the cow getting into the box. For convenience only five side strips are shown; the number will vary with the width of lumber used or the maker's fancy.

Potatoes and Onions.

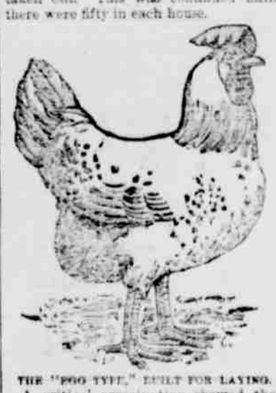
With many crops, says The New York World, rotation seems beneficial, independent of yearly manuring, to keep up the fertility of the soil. With some, however, it does not appear to be necessary. Potatoes and onions, especially the latter, do well on the same soil for years, provided they are properly fertilized. As both are pre-eminently hoed crops, the kind of cultivation they receive to make them profitable keeps the soil in the best possible condition for their growth. For the onion crop the ground should be exceedingly mellow and rich. Barn yard and hog pen manure are both excellent for this crop, provided they are well decomposed and thoroughly mixed with the soil. No crop will pay better for an uncommonly good preparation of the soil than this. A yearly top dressing of ashes applied to the onion beds and raked in before the planting is highly recommended.

For the potato the ground should be deeply plowed and well harrowed to pulverize it. The furrows for the seed bed should be deep and wide, to give the tubers room to form without obstruction from the firmer soil of their sides. For this crop the standard commercial fertilizers have given the best returns, and are now more commonly used than for any other. They may be sown broadcast or more directly applied. For their most economical use they may either be mixed with the loose soil in the bottom of the furrow before the seed is dropped, or be scattered on top of a first shallow covering, leaving the furrow to be filled when the shoots begin to appear. It is not quite settled whether above or below the seed is the best.

POULTRY THAT PAYS.

The Egg Type of Hens—Egg Food and Egg Productions.

Rural New Yorker recently gave an account of how 100 pullets, hatched at one time and raised together, were placed in one house, and when one laid she was taken out. This was continued until there were fifty in each house.



THE "EGG TYPE," BUILT FOR LAYING.

A critical examination showed that nearly all that were laying were of the No. 1 type—the first cut—while those that were still unproductive resembled in shape and appearance No. 2—the second cut—which is a longer legged, ungainly, slim bodied hen, that spends her time looking for something to get scared at. A record of the two flocks showed a difference of 20 per cent. in the number of eggs laid. No. 1 kept laying until nearly denuded of feathers, and finished moulting and began laying quicker than No. 2. A short legged, deep bodied, full breasted, wedge shaped, large combed hen, with a quiet disposition, has capacity to consume large quantities of food and return eggs instead of noise and flutter. The breeder is confident that this flock, grown from selected mothers, will average 200 eggs each per annum. The 20 per cent. advance obtained makes a difference of $1 each in the two flocks. There are "families" of butter cows among the Jerseys, and some day there will be "egg hens" among the already famous Leghorns. One of these improved hens placed in the hands of one ignorant of feeding principles would be compelled to descend to a level with the rest of his flock from lack of a well balanced ration.

The egg shell is largely carbonate and phosphate of lime, while the edible portion is composed of 74.6 per cent. of water, 12.5 per cent. of albuminoids, 10 per cent. of fat and 9 per cent. of ash. This is the average of eighty eggs analyzed at the Geneva experiment station. Milk and meat are largely albumen. The hen cannot elaborate lime and albumen from fat or starchy food, which is chiefly valuable for the warmth it furnishes; hence corn is a poor food, and milk, meat and shell are very essential for egg production.

Eggs differ in quality and appearance in accordance with the nature of the food. Cotton seed meal in excess gives an egg a week old taste that is disgusting. Onions give a rank taste. Too much clover hay and a bad colored lot of sea shells spoil the beautiful white of the egg shells.

The authority quoted furnishes the following tables giving the ration that has produced the best result for egg production for 600 hens:

First—Morning, by weight, all they can eat of the following mixture: One-half bran, one-fourth corn and one-fourth oats, mixed with hot water or milk, together with one pint of salt, two quarts of charcoal and one bushel of

THE "SCRATCHER TYPE," BUILT FOR GETTING SCARED.

clover hay cut fine. If there be no milk add sixteen pounds of chopped meat and one bushel of beets cut fine.

Second—Noon, whole grain by measure. Two parts oats, one buckwheat and one wheat; give one quart to fifty hens in chaff.

Third—Night, the same as second, all they will eat.

Fourth—Drink, milk or pure water.

For chickens, a cake made of sour milk, salt and soda made thick with sifted feed and baked, also cracked wheat.

Here and There.

There were 182 entries of Indian games exhibited at the late New York Poultry show.

And now we are told that Mr. George W. Childs has a $30,000 stable at Wootten.

An enterprising Iowa farmer who operates a big farm has called in the telephone as a means of direct communication with the various departments thereof.

A law protecting song birds has been passed in Oregon.

Over four thousand fowls were exhibited at the New York Poultry show.

From the Mississippi station comes the report that in feeding cows for milk and butter cottonseed is more economical than cottonseed meal.

A bill appropriating $300,000 for California's exhibit at the World's fair has passed the assembly.

The wheat crop of south Australia and New Zealand is reported short and of poor quality.

"C. C. C. Certain Chill Cure," the most pleasant to take of all fever and ague remedies. Warranted to cure chills and fever. Sold by Hillyard & Woods.

25 cents at Druggists. GROSVENOR & RICHARDS, Boston, Mass.

WHY ARE SOME PEOPLE ALWAYS LATE?

They never look ahead nor think. People have been known to wait till planting season, run to the grocery for their seeds, and then complain it for is months, rather than stop and think what they will want for the garden. VICK'S SEEDS never disappoint, is the verdict from the millions who have planted them. If it is Flower or Vegetable Seeds, Plants, Bulbs, everything in the line, MAKE NO MISTAKE this year, but send to once for Vick's Floral Guide, dollar the is cents from first order, it costs nothing. This pioneer catalogue contains three colored plates, Grandest Novelties ever offered, $500 in cash premiums to those sending club orders. Four cash prizes is one of the State Fairs. Grand gifts, chance for all. Made in different shape from ever before, 176 pages, illustrations, 3 cents.

JAMES VICK, SHEDONIAN, Rochester, N. Y.

TO BE SOLD FOR TAXES!

I or one of my deputies will, on Monday, April 13, 1891, it being county court day, expose to public sale to the highest bidder for cash in hand, the following real estate, for taxes due the county and state.

A. J. PICKENS, Ex-sheriff, C. C.

Marion No. 1, Land.

Long, Mrs Matilda, 60 acres, adjoining P Fritts, taxes 87, 88, 89 & 90.
Hodge, Dr Henry, 2 acres, adjoining A J Chittenden, taxes 89.
Jennings, Mrs Susan, 50 acres, adjoining J R Jennings, taxes 89 & 90.
Murphy, Robt F, 1 acre, near Marion, taxes 89 and 90.
Oakley, Wm, 120 acres, adjoining G W Travis, taxes 89.
Memphis Lead Mining Co, 200 acres, adjoining A E Brown, taxes 88.
Samuel, Mary J, 33 acres, adjoining G Carter, taxes 88, 89 and 90.

A $20 A Day Man!

A VOICE from Ohio. Here is a specimen of Mr. Smith, of Akron, Ohio: "Was at work on a farm for $20 a month. I now have an agency and am making $20 a day easily." W. H. Kline, Harrisburg, Pa., writes: "I am doing quite well, have not spoken to you for some time. Last week I made $20 in a single day's work." Every one who takes hold of this grand work is sure to succeed. Shall we start YOU in this business, reader? Write to us and learn all about it for yourself. We make no mistake in saying there are many men and women who are earning money who will start you if you will only write them. If you want to make hold you will do like to do, write us at once and we will show you how to make from $5 to $20 a day and upwards, right in your own part of the country. If you want to see your way clear to make money hand over fist, all the time, you can do so by taking hold of our business. We offer a grand chance to those who are willing to work. We have a business which pays well for all who give their whole time to it. We offer a grand opportunity to those who are in need of money. Large profits and sure success are assured to all who work with us. Many have made fortunes by devoting their whole time to our business. Many others have made large incomes by devoting all their spare moments to it. Many young men have made their entire living by it. Any one can do the work and make money fast. Some of our agents have made $50 in a single day. Many others have made from $5 to $20 per day and upwards, and many other a little spare time. We can show you how to make money fast at a rate you never thought of before. Many have made fortunes by taking hold of our business. Those who take hold at once will be in the best position to make money. We do not advise you to give up your present occupation until you see for yourself that you can make money fast
