MORALE OF THE RUSSIAN ARMY GREATLY IMPROVED SINCE JAP WAR

(By International News Service.)

PETROGRAD, Sept. 26.—Such success as has come to the Russian armies against the Germans in East Prussia has proved a welcome surprise to many of the veteran troops of the czar who at the beginning of the great European war still smarted from the effects of their defeats by the Japanese.

There has been a change in the condition of things on the Russo-German frontier that might surprise even persons familiar with the Russian plan of campaign. One Russian officer at least, who may be regarded as a reliable authority, has been much surprised by the rapid progress of the Russian advance.

Originally five Russian army corps were ordered to the Austrian frontier for the purpose of delaying the Austrian advance if it should be directed against that line. However, the Russian general staff was quite convinced that the main attack would aim at Warsaw through Poland; and to meet this attack two new army corps were sent forward, and at the same time the cavalry on the left flank (Chotin and Kielce) was strengehtned.

The Austrian invading army only met weak opposition in Poland, and the two Russian corps appeared to retire.

Suddenly the Russian cavalry in the south, that is to say, on the left wing, based on Kielce, took the offensive. At the same time the Russian army was ready to pour her enormous masses into Prussia from the northeast frontier.

The great Russian mobilization was ready several days before Germany had expected, and just at the moment when Germany should have made her decisive blow at France and been able to spare her first line troops for meeting the Russian attack. This plan became a failure.

Now, Russia has more than 2,500,000 troops in the northeast corner of Prussia alone, and the Cossack cavalry number 130,000, in seven battle divisions. The German defense against this valanche consists of second line reservists, not more than 800,000 strong, already retiring to the row of forts along the Vistula between Koenigsberg, Marienburg and Torn.

However, this line will be difficult to force by an invading army; it will be more difficult for the reservist army, which has only 40 guns and about 600 Maxim guns to defend.

The effect of this heavy Russian attack is noticeable everywhere in the east of Prussia, and over Berlin is a cloud of stern pressure. People are leaving their homes in fright of the Cossack hordes, who are spreading with an enormous celerity.

There are still about 20,000 Russians in Germany in a distressed plight. More than 10,000 of the German-Russians have left during the last two weeks to return home by way of Sweden. All of them were lacking the ordinary necessaries of life, but the Swedish people everywhere have tried to lessen their sufferings, and at the main railway junctions where the special trains stopped, Swedish ladies have distributed food and rugs, etc., amongst the miserable people. They all tell the most appalling stories of the rough treatment they have met with at several places in Germany, but at the same time they tell many stories of German courtesy and chivalrous behaviour towards the female fugitives.

CHANNEL TUNNEL PLANS ARE REVIVED BY HOSTILITIES

WOULD BE OF INESTIMABLE BENEFIT TO NATION IN THIS CRISIS.

(By Associated Press.)

LONDON, Sept. 26.—The clash of war among the nations of Europe has not modified the views of the supporters of the channel tunnel scheme whose desire to build a tunnel from Dover to Calais has been blocked for years by the military authorities on the ground that it would destroy England's insularity.

Several peers and members of parliament who have long shown an interest in the scheme declare that instead of proving of assistance to the enemy, a channel tunnel would have been of supreme assistance in transporting the British army.

They declare they will continue the advocacy of the tunnel at the end of the war. The precautions suggested to prevent the tunnel being made use of for an invasion of England include the flooding of a dip in the tunnel, commanding exits with guns that could not be silenced from the sea, and an electric button that might touch off an explosion to destroy a part of the tunnel if necessary.
