EXHAUSTION OF MINERAL RESOURCES.

Papers Published By United States Geological Survey.

The report of the National Conservation Commission of 1908, showing the reckless manner in which our natural resources are being wasted, finds an echo in a bulletin (No. 394) just issued by the United States Geological Survey, in which are reprinted the papers on mineral resources contributed by members of that Survey to the conservation report. The data on which these papers are based were not obtained especially for the occasion, but were taken from the files of the Survey, where they had been accumulating for years. Taken together they present a state of affairs that may well awaken reflection.

Coal.

Coal is considered first, and it is shown that waste in mining loses forever about one-half as much as is marketed. This half is either left in the ground in the beds or in the shape of pillars to support the roof. Coal has been extensively mined in the United States for not much more than half a century, but the consumption is increasing so enormously that if this increase should continue all the easily accessible coal would be exhausted by the year 2,040 and all coal by the middle of the twenty-first century. It will of course, not continue at such a rate, for the increasing scarcity will raise prices and check consumption. Water power, too, will undoubtedly largely take its place.

Petroleum and Natural Gas.

With regard to petroleum the situation is a good deal more serious. Petroleum has been used for less than fifty years, and it is estimated that the supply will last only about twenty-five or thirty years longer. If production is curtailed and waste stopped it may last till the end of the century. The most important effects of its disappearance will be in the lack of lubricants and in the loss of illuminants. Animal and vegetable oils will not begin to supply its place. This being the case the reckless exploitation of oil fields and the consumption of oil for fuel should be checked.

In natural gas the waste is enormous; 1,000,000,000 cubic feet are estimated to be wasted into the air every twenty-four hours. The gas supply will last about twenty-five years—about as long as it has already been utilized.

Iron.

Iron is very abundant in nature, but usually is found in ores so poor that it can not be extracted at any reasonable cost. The best ores are being rapidly worked and it is estimated that within thirty years they will have been exhausted and that it will be necessary to resort to ores that can not now be worked at a profit. This, of course, means higher prices unless new and much cheaper processes shall have been invented.

Gold, Silver, Etc.

Gold, silver and zinc are all so abundant that the supply is likely to last for centuries. Copper is also abundant, but is largely in low-grade ores which can not now be profitably worked. At increased prices, however, the supply will probably be abundant. For lead, however, the outlook is much less favorable. Its production in the United States is still increasing slightly, but is decreasing elsewhere in the world, and this despite a marked increase in prices. Probably the world's output has already reached a maximum and will henceforth decline.

The phosphates, it is estimated, will be exhausted in about twenty-five years and the farmer will then have to look elsewhere for fertilizers.

Fresh supplies of all these materials may, of course, be found, but (except for gold) it seems unlikely that they will be great enough or valuable enough to materially affect the estimates.

Bulletin 394 can be had, free of charge from the Director, U. S. Geological Survey, Washington, D. C.

A UNIQUE EXPERIMENT.

School Children to Design, Build and Equip a Brick Bungalow.

Miss Florence Holbrook, principal of the Forestville school, near Chicago, has a unique experiment in self-government in readiness for 1200 pupils when the return to school after the summer vacation. Miss Holbrook laid her plan before the building and grounds committee of the school board the other day and asked for authority to put it into effect.

The principal's plan is to erect a story and one-half brick bungalow on the school grounds, every bit of the work, from the drawing of plans to the preparation of a dinner for the house warming to be done by the boys and girls.

The bungalow will occupy a tract about 150 by 125 feet, nearly a half of the school playgrounds, and when completed will contain a living room and kitchen on the first floor and a combination sleeping room and nursery for imaginary children in the half story above. On an upper veranda there will be an outdoor sleeping apartment to be used possibly by children of a consumptive tendency.

The operations will start with a designing competition, the children in the two upper grades being directed to prepare plans and submit them to Dwight H. Perkins, school architect, who has consented to act as judge of the contest. The best plan having been selected, the children will tear up the bricks with which the school playgrounds is paved and use it to start the walls of the bungalow.

"I want to get away from the idea that the child to enjoy himself must be playing all the time," said Miss Holbrook. "I expect it will be about two years before the bungalow is finished. While the building is going on the girls will be at work making furniture and other things for the interior.

A Night Rider's Raid.

The worst night raiders are calomel, croton oil or aloes pills. They raid your bed to rob you of rest. Not so with Dr. King's New Life Pills. They never distress or inconvenience, but always cleanse the system, curing colds, headache, constipation, malaria. 25c at the Red Cross Pharmacy.

Andrew Carnegie's Greatest Rival
in the manufacture of structural material for American buildings, big and little, high and low, is
EDISON
Portland Cement
Mr. Carnegie warned the Conference of Governors at the White House that the supply of ore for making structural steel would be exhausted before the end of the century. Then he assured them:
"Fortunately, the use of concrete, simple and reinforced, is already reducing the consumption of structural steel. Concrete promises to become superior to steel and stone in strength, durability, convenience and economy of use."
Edison Portland Cement is more easily worked, is stronger, is more economical than any other, because ground to a fineness
10% Finer Than ANY Other

ABOUT THE STATE

Norbert, the eight-year-old son of Mr. and Mrs. Joseph Thebarge of Bennington, died on a train while being taken to a hospital at Troy, N. Y. The child fell on a stone wall a few days ago and injured one knee. Little attention was given the matter until the bruise which appeared a small matter until Monday afternoon when delirium developed. Blood poisoning was the cause of death.

Rutland has another competitor for the shops of the Delaware & Hudson railroad, which are to be removed from Whitehall, in Fort Edward, N. Y. Seven or eight engines are already stationed there and it is reported that the town stands ready to offer a roundhouse with a capacity of 40 engines, a site for machine shops and exemption from taxation.

Work has been begun at the New Haven quarry of the Middlebury-Vermont Marble company setting up the power plant. Equipment for the Middlebury quarry is on the way. This includes two Ingersoll gadding machines while a third will be installed at Pittsford. A core eight feet long of pure white marble without a blemish has been taken out at Middlebury.

Mr. and Mrs. George S. Wade have probably been married the longest of any couple in Stowe. They have just passed their 87 and 85th birthdays and have been married 64 years. Although in deep affliction from the death of their daughter, Mrs. A. A. Royce, Mr. and Mrs. Wade are in comfortable health and would easily be taken for ten years younger. They have occupied their present residence for 60 years. One daughter, Miss Jessie Wade, is left to them of five children.

Struck by Spent Bullet.

While sitting on her veranda the other afternoon, Mrs. G. A. Perry, of Springfield, was struck by a spent bullet and slightly wounded in one shoulder. The bullet penetrated to a depth of nearly an inch and then fell out into her lap.

Two boys, Russell Stiles and Foster Amidon were shooting at a kingfisher in the Stiles boy's yard, with a 22-calibre rifle, a bullet from which travelled all of the intervening distance and found its mark in Mrs. Perry's shoulder.

A Good Fish Story.

W. L. McLam of St. Johnsbury, assistant superintendent of the Metropolitan Life Insurance company, in authority for the following story, according to the Hardwick Gazette. While riding in his automobile down the river road, Mr. McLam noticed a rock in the Lamoille, around which myriads of little minnows were swimming to and fro in the shallow water. From a near by fence, a robin, which seems to have strong sporting instincts, was viewing the situation. Suddenly, a bright idea occurred to the bird. Flying to the rock, he waded into the shallow water, dexterously fished out a minnow, walked back, killed it by rapping its head against a rock. Mr. McLam adds in conclusion that he has seen other Hardwick robins do the same thing.

The story has no moral, adds the exchange, but it seems to indicate that, in this hustling town, even the birds of the air are adapting themselves to their environment by acquiring a phenomenal ability to get what they want.

It is respectfully requested that Mr. Roosevelt send a telegram from Africa, stating if, in his opinion the maker of this observation is a nature fakir.

Work of Robert E. Lewis.

The Cleveland, Ohio Leader of July 12, contained an interesting article under the head of "Introducing Robert E. Lewis, the New Head of the Y. M. C. A. Who Accepts His Work as the Challenge of the City." Mr. Lewis was one of the early secretaries of the St. Johnsbury association, and has many warm friends there who have watched the career with interest. The article is a lengthy one, contains a picture of Mr. Lewis and among other things says: In 1897 Mr. Lewis was appointed secretary at Shanghai, China, as representative of the Cleveland association, which assured his support. Under his able administration the organization at Shanghai became the leading association in the Orient, and as a direct result of its aggressiveness that city enacted laws prohibiting public gambling, bawdy houses, and the disagreeable street "solicitations." Mr. Lewis won thirty out of thirty-one cases in closing disorderly houses. When President Taft was in the East he referred to this achievment of Mr. Lewis's as the greatest step in the civilization of China. In February, 1898, he returned to the States and became executive general state secretary of Ohio and last year, under his leadership, $460,000 was raised to Ohio for Y. M. C. A. buildings, making it the banner year for Y. M. C. A. work.

He went to Cleveland in April of the this year to become general manager or general executive secretary. Under him are executive secretaries in charge of each of the five departments and under these subordinate secretaries are division superintendents, making a total secretarial force of thirty men, who are directing the work of the city under the leadership of Mr. Lewis.

WHEAT BREAKS.

Prices Show Effects of Wednesday's Pounding.

Chicago, July 23.—Wheat traders began all over again yesterday morning. The selling out of several million bushels of wheat yesterday by Patten and his followers, sales of half a million bushel lots and a number of other heavy offerings were more than the market could digest and another break in prices was in order. From $1.15½ at the close Wednesday, July wheat opened yesterday from $1.14¾ off to $1.12, September broke to $1.08, December sold as low as $1.06⅛. Strong people came into the market and took the offerings. It was thought that the Patten brokers were good buyers on the early break. Regardless of the bearish news from all quarters and the disposition of the local trade to jump on the market for a further drop, there was a good rebound during the morning.

A TIGER'S ATTACK.

Intruding on Camp, It Wounded Several and Badly Frightened All.

An interesting report is given by an officer in charge of a survey party in the Lushai Hills, adjoining the Cachar district of Assam, dealing with a series of ferocious attacks by a tiger on two of his surveyors.

The tiger made his first appearance on Feb. 18 at the camp of Surveyor Gopal Singh, when it is said to have sprung upon the surveyor and one of his khalasis, who were seated along side each other while the evening meal was being cooked. For some reason not known the tiger did not touch either of the men and disappeared as suddenly as it had come, but the men were so alarmed that after a sleepless night they moved their camp to that of Surveyor Amar Singh, about four miles off. On Feb. 21, however, the same tiger presumably, attacked the camp again, seizing a khalasi who was washing his cook pots in a stream not twenty yards from the camp.

One of the tindals, by name Nandu, armed with only a stick, very pluckily rushed at the tiger and tried to beat it off the unfortunate khalasi, but it was not until the rest of the two squads came up that the tiger dropped in prey and disappeared, only to return a few minutes and in spite of the frantic shouting of the men seized Nandu by the arm. It was again driven off, but again returned, and seized a third khalasi. Its third attempt to provide itself with a meal was frustrated in the same way as the others had been, and, fortunately, it only succeeding in inflicting slight injuries. The whole party then spent the rest of the night surrounded by fires and keeping up a continous hallabaloo.

At daybreak they moved off to a Lushai village carrying two of the wounded men and their maps, but leaving their tents and everything else behind them. On their way they were met by the camp officer, L. Williams, who had somehow received the news of the desperate straits the men were in and had hurried off to their assistance. He did what he could for the injured men, but one of them was in such a woeful condition that he died almost immediately. They were all sent to Silchar, however, and a band of armed Lushai was dispatched to the abandoned camp to collect and bring away all the kit that had been left there. They found the tents, bedding and blankets and bags of rice torn and dragged about and a sight rule and plane table stand bearing marks of fangs. Probably they had been utilized in beating of the beast.

When Mr. Williams met the party all the men were so profoundly affected that not one of them could speak above a whisper and begged not to be sent back to the locality, but to be allowed to work for the rest of the field season in open cultivated country, which they have been permitted to do.—From the Survey of India Notes.

Summer and Fall Seeding and Top-Dressing.

Many farmers are finding it to their advantage to seed down during the summer and fall, claiming that by so doing they are apt to get a much better "catch" than they do when they follow the usual practice and seed down in the spring.

The same is true regarding top-dressing grass land. Some of the most progressive farmers put on top-dressing immediately after haying, with perhaps a small application of nitrate of soda the following spring.

If you will send your name and P. O. address to Carroll S. Page, Hyde Park, Vt., he will send you free, postpaid, several formulas for mixing fertilizers especially adapted to top-dressing and fall seeding, together with prices of ingredients, full directions for mixing, etc. These formulas have been approved by the Vermont Experiment Station and will be found thoroughly reliable.

The New England Boy's Opportunity

The Worcester (Massachusetts) Branch of the National Metal Trades Association, an organization of manufacturers, is looking for young men to learn the Machinist Trade, offering exceptional opportunities to the active ingenious, faithful New England boy.

This is the age of specializing. An expert Planer or Lathe Hand always commands work and first-class wages. If you want to learn such a trade, communicate with Donald Tulluck, Secretary of the above-named Branch, 44 Front Street, Worcester, Mass., stating school experience and age, and it will receive prompt attention.

STORE HOUSE.

Up-to-date accommodations for storing most anything, carriages and sleighs a specialty. No dust or dirt and very little danger from fire, although I can insure property stored by me at a very cheap rate if desired. Prices right. Call on or address, George E. McFarland, 286 South Main street. Telephone call, 38-4. 5?
