THE DAY'S OPERATIONS IN STOCKS.

Stock market trading was made up in great part of the transactions of professional traders. Public buying of securities was in evidence on Monday, but the failure of the sterling exchange market to decline to the gold importing point and the continued firmness in money rates discouraged a renewal of public interest on Tuesday, and yesterday as well. A sustained buying movement apparently is out of the question until monetary conditions begin to run in favor of lower rates for accommodation. Conditions are getting nearer to such a situation every day, and yesterday's developments in the financial world suggested that the backbone of tight money had been broken. Easier rates in the afternoon received a ready response in securities values. Early losses were recovered, and at the close the greater number of issues showed net advances as compared with Tuesday's final level. Strength in the foreign markets and buying on balance for European account helped prices and sentiment.

The exports of general merchandise in October were larger than in any month in the year, and, with the exception of November and December in 1898, they were heavier than in any one month on record. Imports amounted in value to $72,705,894, against $72,820,746 in March, the heaviest month of the year, a total only exceeded by July and October. Compared with October a year ago, imports increased in value $20,356,368, but, despite this enormous gain, the excess of exports over imports was in value $54,058,892, compared with an excess of $66,270,037 in the corresponding time in 1898. For the ten months of the year the total excess of exports over imports is $370,867,157. In the same time exports have increased $121,344,579, representing in great part a gain in exports of manufactures. Imports show for the period named an increase in value of $130,646,648. The volume of exports for the year to October 31 has never before been equalled in any similar time in the history of the country, while with the exception of the ten months ending October 31, 1894, imports for the calendar year to October 31 have broken all records.

The heavy gain in imports reflects prosperity. The heavy increase in exports reflects prosperity. The excess of exports over imports shows that the United States has a grip on the international exchange market that foreign countries cannot break, and that this country is rapidly becoming the clearing house of the world. With the current enormous trade balance in our favor, with an increasing disposition among foreign investors to buy American securities, and with prosperity general throughout the land, the present monetary troubles at this centre sink into insignificance as important or disturbing factors. If money supplies were scarce at this centre because of gold exports and hoarding incident to fear and business depression; if the country at large were poorly supplied with funds, and if foreign trade balances were in Europe's favor, then high rates for accommodation might well induce liquidation of stocks and bring about demoralization in the financial markets. The statement of foreign commerce for October will encourage investors to maintain a firm hold of their possessions. It will influence investors to add to their holdings, and induce substantial market interests to increase their speculative lines in order to take advantage of the higher prices that sooner or later trade conditions must bring about.
