

# HOT BLAST OIL BURNER

SAVE 1/3 OF YOUR COAL BILLS

The Gas Flame Burner is a Wonder. For Cook Stoves, Heaters and Furnaces. Burns Air! Saves You Fuel! Barrels of Air to Pints of Oil! No Smoke, No Noise, No Ashes

In every clime the fuel is a perplexing and most expensive one, but nowhere on earth does air cost anything. By the method employed in the GAS FLAME OIL BURNER, you find a perfect combustion of air and oil. LOTS of air and little oil.

## SIMPLICITY.

So handy; turn the valve, touch a match—fire on; ten minutes, breakfast ready. Turn it off—the fire out. As handy as city gas and far cheaper. In fact, every family can own its own gas plant, and you don't have to pay for it. See the point?

For this burner burns 85 per cent air and 15 per cent oil. Like all great inventions, simplicity marks it as most successful. Our burner never fails, can't fail; it is too simple to fail.

## SAFETY.

As we have pointed out, the use of this burner is absolutely safe. It uses solar, distillate or gas oil, and, taking the same precautions in using this burner as you would an ordinary gas stove, you absolutely eliminate any danger. Also in construction and principle of our burner we more than comply with all insurance regulations and city oil ordinances, as you can readily see on investigation.

## ECONOMY.

The value of every appliance is in the economy effected by its use. The value of oil as fuel for domestic purposes has long been appreciated. But not until the Gas Flame Burner was perfected has its useful and economical use been assured. We effect the saving by burning oil, and air which doesn't cost a cent.

## UNIVERSAL APPLICATION.

By the adaptability of this burner it can be installed in any cook stove or heater; no cost for installing and stove is not injured in any way. Anyone can operate it that can turn a valve and strike a match.

The fire once started can be regulated to any degree of heat, by turning the valve. The more fire, the more air, and the more heat is made and it will burn indefinitely at a uniform temperature.

Turn the valve again and the fire is out. A great many families are forced to burn city gas as fuel because of the cost of coal and wood and no place to store it, losing the great comfort and convenience of a cook stove; also in heating water for the bath they rely on instantaneous heaters. Here is an ideal solution.

Buy a cook stove, equip it with a Hot Blast Oil Burner, then connect with your hot water tank, and the same fire that cooks your meals will heat your water supply.

## SOME OF THE BENEFITS.

30 to 50 per cent saved over cost of coal and wood. No heavy, dirty fuel to carry in, or ashes to carry out. No poisonous vapors, as from city gas, and no smoke or ashes.

A uniform, clean, bright fire, as gentle or fierce as requirements demand.

The whole world is interested in stoves and burners. Every family is compelled to use one or more stoves of some kind. You need a burner for these stoves. If you give this burner a trial you will be perfectly satisfied, as are the hundreds of present users.

## WANTED—GOOD, RELIABLE SALESMEN AND MANAGERS.

Our agency proposition is a most attractive one. You can make more money handling the Hot Blast Oil Burner proposition than at any other business with ten times the money invested.

Come and see the Burner demonstrated, up stairs over Norton's store. Ladies especially invited.

## Salt River Valley Letter Attracts Much Attention

The fact that The Alliance Herald is read over a large scope of territory and also that the interesting news items and articles are read was emphasized this week in the many inquiries received by Lloyd C. Thomas relative to the Salt River Valley of Arizona by people who read the letter by "Josiah Hayfork" in the last issue of this paper.

Word was received from Phoenix this week that about one million dollars is being raised to finish developing the electrical power plants that are being installed up and down the Salt River Valley irrigation and storage system. When all of the plants are in about twenty-five thousand horsepower will be developed. These power plants will belong to the land under the project and the income from them will be devoted to the land. What this means to the Salt River Valley cannot be fully understood until it is explained that the demand for this electrical power far exceeds what can be supplied by the many power houses and the income from these plants will amount to several million dollars annually when they are all completed.

The power will be used by the mining towns of Globe, Kelvin, Winkelman and Ray; by the many creameries, factories and the big beet sugar factory at Glendale. In addition to all of these the new Phoenix-Glendale interurban electric line will use much power, and what is of the greatest importance to the farmer, the possibility of obtaining power easily and cheaply, without heavy investment for developing plants, will have a tendency to encourage the building of other interurban lines.

This means the greatest thing, next to the development of water, that has happened to the Salt River Valley, for it will make transportation of produce and passengers between distant parts of the valley cheap and easy, and will quickly result in more intensive farming and the individual farm will quickly grow less in area. That means more population, more money, greater success with specialized crops and a generally better condition throughout the valley. And the power plants that are being built will net the land owner a perpetual revenue, and investment of such nature as he cannot otherwise acquire anywhere in the United States. Lloyd C. Thomas has just received one of the large special government topographical maps of the Salt River valley and project, showing the location of every irrigation ditch; the kind of soil; the altitude of every section of land; all creameries, farm buildings, etc., etc. It is a very interesting map and after seeing it one gets a much better idea of the way the valley lies.

A. S. Reed of Alliance left Sunday evening for Phoenix and the Salt River valley. Mr. Reed has been there before and he goes this time to select his farm. It's a fact that the more a man sees of the valley the better he likes it.

## Interesting Indians at Phoenix, Arizona.

The Indians around Phoenix are gradually becoming quite well educated through the large Indian school which is located just north of the city. However, the Indians are not noted for their talkative powers. Recently a flashily dressed youth from the east who had a pretty young lady in tow approached an Indian on one of the main streets. He wanted to show off to the young lady so he started out: "Big Injun?" he commenced. "Huh?" was the reply. "Big Injun smoke um pipe of peace? Heap big Injun get ready to go on war-path? Where's big Injun's squaw?" said the Willie boy in the know-it-all manner. The girl watched him admiringly. "Say, Charley," said the young Indian who is a graduate of the government school, "hadn't you better run along and buy Flossie an ice cream soda?" Whereupon Charley hiked it as fast as he and the pretty girl could get away.

## Dry Weather Other Places

It has been somewhat dry in Box Butte county this year, but there is some consolation in knowing that it is not as bad here as in many other places. N. A. Kirk received a letter from Aurora county, S. D., where he has land, informing him of a rain there last week, which was the first good rain this year. In other parts of South Dakota the drought has been even worse.

T. H. Barnes came in Saturday from Colorado, where he has been the last two months. He informs us that this is the worst summer that the eastern part of that state has had for twenty years. In the Greeley irrigated district crops are burning up, as water cannot be secured. Crops in northwestern Nebraska under "dry farming" are better than in eastern Colorado, including those under "dry farming" and also those under the ditches.

## Death of Little Boy

Last Sunday morning Lloyd H. Colerick, the little son of Mr. and Mrs. Ben Colerick, passed from this life to the better world, at the age of three years, lacking nine days. A funeral service was conducted by J. W. Thomas at the home in West Lawn, at 10 o'clock a. m., on Monday, after which the remains were taken to Nemaha, Nebraska, for interment, accompanied by the parents and family, and Mr. and Mrs. Squires, the party leaving on No. 44.

## Card of Thanks

To our friends and neighbors and the members of the M. W. A., who so kindly assisted us during the illness and after the death of our dear little boy Lloyd, we wish to offer our sincere thanks. MR. AND MRS. BEN COLERICK AND FAMILY.

The Union Pacific is this week shipping out all the timber, lumber, piling, paints and other supplies from this place, which is proof positive that there is no intention of extending the track westward, at least for some time to come. After next week the employees of the Union Pacific across the river will include the yard-master, hostler, agent and coal tender—four men in all.—Bridgeport-News Blade.

## ALLIANCE HORSE MARKET

I wish to call the attention of horsemen to the conditions governing the sales which will be held at my new sale yards in Alliance.

I have remodeled and rebuilt the yards, making them large enough to accommodate nearly a thousand head of horses; each yard is supplied with water, and racks for hay.

For the sales, the first of which will be held late in July, I intend to do thorough and systematic advertising. I will furnish an experienced auctioneer who is himself a horseman and a judge of value. I will supply the yards and water; the advertising; the auctioneer; such help as is needed on sale day; and a clerk, who will carefully attend to all settlements; at the following rates: \$25.00 per car lot; \$2.00 per head if horses are sold singly or in pairs. Hay and feed will be furnished at the lowest possible cost.

This will make it an easy matter for horse growers in this section to find buyers, and at a cost as low as at any sale market in the state.

My wide acquaintance among horsemen of the state; the excellent railroad facilities of Alliance, together with the number of good horses raised in this vicinity, should make the establishment of this barn a certainty and be of great benefit both to stock growers and townspeople. If you have horses to sell, see me or write me at once as it is my intention to put forth every honorable effort possible for the success of these sales and the first sale will, without question, be a hummer and a rare opportunity for horse growers to find horse consumers at home.
