The Rhein-Rousey Company have recently added to their stock the "Carbo" steel spring fencing system, which appears to be about the greatest boon to farmers that we have seen in the nature of fencing. The posts for this fencing are not "set"

into the ground where a hole has been dug—they are just plain driven in, like a stake, and their construction is such that they go into the ground in a hurry, but positively refuse to get loose or come out unless they are dug out. Another feature is that they are perfect lightning detectors and allow it to "ground" before it passes even one stake.
