DOOM OF THE GREAT GAME.

It Has Vanished from the Earth Before the Rifle.

NORTH AMERICA DESTITUTE

And South African Plains Stripped of Their Old-time Inhabitants.

The Places that Knew Them Once Shall Know Them Never Again—A Vast Preserve for Great Game in South Africa Suggested as a Means of Preventing the Extinction of the Last Remaining Animals—Stories of Game Not Yet Exterminated in America from This Continent.

From the Fortnightly Review.

The introduction of firearms—and especially of breech-loading firearms—and the rapid opening up of one great hunting ground after another, have wrought within these last sixty years such incredible havoc that great game are now rapidly approaching a period of extinction. Men begin to wonder what their descendants of the next century will have left them in the way of sport, and in which direction the adventure-seeking Briton shall direct his energies.

It is quite certain that even the remoter corners of the world cannot much longer support the incessant waste of animal life, and it may be not unprofitable here to consider briefly the sad tale of a vanishing fauna, and the ways and means by which—if it is not already too late—something may be done to preserve the rarer and nobler creatures still left to the wilderness.

North America has been almost destroyed as a game country; the bison has gone—the wapiti, the moose, the caribou, and the bear are going fast. Of South Africa, a country more prodigally endowed by nature than any other part of the world, the same miserable tale has to be told. Only in portions of the virgin veldt of Mashonaland, the regions of the Pungwe River, and the least easily accessible deserts of North Bechuanaland and the Kalahari, are there to be found fair representatives of that astounding fauna, which not long since gave unspeakable charm to plain and mountain, karroo and kloff, from the southern shores of the Cape Colony right away to the far Zambesi. And even in those distant and difficult wilds their numbers are daily and hourly diminishing, so that apparently in a few more years the great game of all Southern Africa will be but a memory.

In India the same war of extermination has been and is incessantly waged, and with the same results. The Indian lion, the great mailed rhinoceros, the gaur, buffalo, sambur, bear, even the tiger itself, and many other species of great game are vanishing rapidly. In other countries the same process is going busily forward.

It is now—unless some effectual method of preservation can be quickly introduced—absolutely certain that the complete extermination of the great game of Africa, America, and Asia is merely a question of years. And in southern Africa, especially, this period of extinction is very close at hand. The quagga (*Equus Quagga*) has vanished; the white rhinoceros has been all but shot to extinction; the giraffe, the eléphant, the black rhinoceros, the hippopotamus, Burchell's zebra, and most of the great antelopes are fast disappearing.

When the early Dutch settlers landed at the Cape in 1652, and under their first Governor, stout Jan Van Riebeek, took possession of the soil, they found the country one vast and teeming natural preserve of game. From the very shores of the Atlantic and Indian oceans there wandered a countless multitude of the noblest and rarest species with which a prodigal nature ever blessed the earth. The elephant, rhinoceros, and buffalo roamed everywhere; the hippopotamus bathed his unwieldy form in every stream and river; the lion, leopard, and cheetah pursued their prey unchecked; the eland, koodoo, gnu, hartebeest, and a number of other fine antelopes grazed in astonishing plenty. The mountain zebras jaunted in the rocky fastnesses of the Cape peninsula and every other range of the colony in strong troops; the quagga (now, alas! extinct) thronged the karroo plains. In every corner of that vast land, upon flat and upland, in deep and lonely kloof, and over boundless plain, there wandered, free and undisturbed, as they had wandered through countless ages of the past, an unexampled array of wild animals.

The early Dutch settlers scarcely knew what to do with this profusion of game. The elands and koodoos broke into their gardens and vineyards, the elephants and rhinoceroses made hay with their crops; the lions besieged them in their fort, and dogged Gov. Van Riebeek in his garden. There is a pathetic yet ludicrous entry in the old records of the Cape commanders, bearing date the 23d January, 1653, "Elephants, says the chronicle, "it appeared as if the lions would take the fort by storm."

In 1796, when the British first took possession of the Cape the game was as plentiful as ever at no great distance from the Cape. Mr. Harris found elephants in the present Transvaal country (where not a single elephant now remains) in immense numbers. Rhinoceroses were as common as pigs in a farmyard, and were a perfect nuisance to the gunner. There is a single instance: "On one way from Kuruman the wagons hill not half a mile distant we counted," says Harris in his book of travels, "no less than twenty-two of the white species of rhinoceros, and were compelled in self-defence to slaughter four." Burchell's zebras and quaggas, blue and white-tailed gnu, were found "in immense herds," elands and hartebeest in "vast herds;" springbok in "countless herds;" blesbok "in immense herds." Other examples were almost equally abundant.

Harris's books quickly attracted the notice of many English sportsmen. Oswell, Vardon, Murray, and Gordon Cumming, four of the greatest hunters of the middle of the century, all fascinated by his glowing descriptions, found their way to these happy hunting grounds in the early forties, and the extermination of great game began in earnest. Traders were uneanwhile pushing up country, and the sale of firearms to natives—which has since proved one of the most fruitful sources of destruction—set in. From the time of Harris's memorable expedition the downfall of the game of the far interior has proceeded with dreadful rapidity. In one season Oswell and Vardon slew between them eighty-nine rhinoceroses—to take one item of animal life alone! C. J. Anderson, in the fifties, shot some sixty of these immense and slow-breeding creatures in two months in southwest Africa. Gordon Cumming probably could boast the greatest bag of any of these Nimrods. He shot through South Africa from 1843 to 1850, and his butcher's bill must have been immense.

But, it is to be remembered, besides the great hunters, whose books have recorded for us this plethora of sport, there were always silently at work in the wilds those unknown gunners who are continually to be met with troubling the world with statistics—Englishmen, Boers, Griqua half-breeds, Hottentots, Bechuanas, and other native hunters; all these were, and still are, busy. And to the weapons of these obscurer sportsmen the great bulk of the game of South Africa has, of course, fallen. Slowly and steadily their work of destruction still goes forward. Nothing it seems can check it. How are you to patrol or preserve those silent, illimitable deserts, hundreds of miles even from a native town, where the game still lingers, and the black hunter often armed nowadays with a good Martini-Henry breech-loader—is at work? At the same time you can hardly blame the black hunter for slaying the game of his country. It is a natural result of contact with the white man and of the introduction of firearms.

Gordon Cumming began his hunting in 1843 in the northern part of Cape Colony. At that time the game still swarmed over the parched karroo plains. Quagga, wildebeest, hartebeest, and springbok fell in numbers to his rifle. In the desert south of the Orange River—now sheep and goat walks in the Hope Town division of the colony—he enjoyed magnificent sport with the gemsbok (*Oryx Capensis*) which then abounded there. In those days the "trekbokken," or migration of springboks, was common in the south of Cape Colony. Gordon Cumming witnessed one of these migrations. "I behed the pioneers," he tells us, "and even the hillsides which stretched away on every side of me, thickly covered, not with herds, but with one vast mass of springboks; as far as the eye could strain the landscape was alive with them, until they seemed down into a dim red mass of living fire. This 'trek-bokken' Cumming estimated at some hundreds of thousands. On speaking to an old Boer about it, he remarked that "it was very fair 'trek-bokken' out," he added, "you this morning beheld only one flat covered with springboks. I give you my word a person could take a long day's journey over a succession of flats covered with them as far as I could see, and as thick as sheep in a fold." I have himself heard much the same account from old farmers, English and Dutch, of the Cape.

In these astonishing migrations the springboks, traversing from the immense and arid deserts in the northwest of the colony, devoured every blade and hair of vegetation before them. The frontier Boers often lost their entire crops, and even their flocks and herds were sometimes swept away before the myriads of antelopes and lost. It is on record that a lion has been seen encompassed by a mass of trekking springboks quite unable to escape, a pretty situation, truly, for the king of beasts!

In the dry uninhabited regions of Bushmanland the springbok will doubtless survive to adorn the veldt for a good many years to come.

Gordon Cumming gradually pushed his way north of the Orange River, enjoying the most extraordinary sport and shooting incredible quantities of game. He shot all his elephants in the Bakwêna and Bamangwato country, never needing to go further north than Letloche, not very far north of Palapshwe, Khama's old town. There are old men yet alive among the Bakwêna and Bamangwato (among the latter is the Chief Khama himself) who hunted with Cumming in those days, and remember his exploits perfectly well. Khama himself has proved an apt pupil, and no better or braver native sportsman has ever gone into the hunting veldt.

The last of the great hunters is Mr. F. C. Selous, and, of all the pursuers of big game, Selous has been upon the whole the most sparing and the most wasteful. In his early years, it is true, he pursued elephants for their ivory, as a means of livelihood and a matter of business; and by dint of immense courage, energy, and endurance, slew undoubtedly great numbers of the tusk-bearing pachyderms. But, apart from this, Selous has always been one of the most merciful of hunters, killing only for the sake of procuring specimens or to supply food for his followers.

Following Gordon Cumming, and bitten by the wonderful records of his sport, came Baldwin, another mighty hunter, who shot from Zululand to the Zambesi from the years 1852 to 1860. Mr. Baldwin is still alive and hearty, able to enjoy sport in Cheshire and elsewhere.

In the middle fifties Baldwin shot chiefly in Zululand and Amatongaland, where, among all kinds of heavy game, he had immense sport. These countries, together with the adjacent Swaziland, are now quite denuded of great game. At a later period he shot in the far interior, visiting Lake Ngami and the Victoria Falls. A fine shot himself and a man possessing wonderful nerve, William Charles Baldwin established a reputation in South Africa second to none of the great Nimrods who preceded him. Many and many a big bull elephant, many a fine tusk of ivory fell to his rifle. His game toll, too, must have been a very heavy one.

But Selous found things already greatly changed. By the year 1871, when he first landed, much of middle Bechuanaland and the Transvaal had ceased to be shooting ground. To get among the elephants the lad—as he then was—had to penetrate to Matabeleland, gain permission of Lo Bengula, and then pass into Mashonaland.

In Mashonaland, along the Zambesi, in the Mababe veldt (Ngamiland), and in the Chobe River country, Selous for many years had his fill of sport and excitement. But the elephants vanished rapidly, and became more and more hard to procure, and for some years before the opening up of Mashonaland (in which he has played so great a part), the last and best of the African hunters—as one may well call him—shot specimens for museums and turned his attention to exploration. Whatever damage he may have done in early years among the elephants, the magnificent specimens of great game sent home by Selous to the natural history and other museums, amply acquit him of the charge of mere wasteful slaughter.

From this charge it is impossible to absolve many of the great hunters. Gordon Cumming and many others were undoubtedly wasteful in their methods; they shot far too often for the mere pleasure of slaying, and wasted enormous numbers of rare, singular, and beautiful game. One can, perhaps, hardly blame them; the profusion of animal life was so great, the temptation so overpowering. No one who has not been in the presence of great game, mounted and armed, can understand how difficult it is to stay one's hand at such a time.

Some years since, in wandering through Cape Colony, I took a good deal of trouble to ascertain the distribution and numbers of the fauna still remaining. I found, of course, that terrible devastation had taken place. Most of the nobler beasts had vanished. The crowds of game that roamed the veldt in Gordon Cumming's time were gone, or nearly gone. The quagga had become quite extinct; the eland and the blesbok had disappeared; the lion and the last rhinoceros had given up the ghost in the fifties; the gemsbok and hartebeest only found shelter in scant numbers in the desert fringing the Orange River. Almost the last hippopotamus of the Cape rivers was killed in 1874. A few of these behemoths are, however, still to be found in the lower rivers of the Orange. The elephant and the buffalo, thanks to timely measures of the Cape Government in years gone by, had strangely enough been preserved from extinction. It is refreshing to be able to record that troops of these animals still range freely in the Knysna Forest, the Addo Bush, and one or two other densely jungled localities on the southern borders of Cape Colony. But although these animals still roam the old colony within sight of the Indian Ocean, it is a melancholy fact that you may now travel for a hundred miles and more up country without finding a single specimen. The koodoo, one of the most magnificent of all the antelopes, thanks to the efforts of a few English farmers in the Eastern Province, still exists. The species defies extermination so far, and haunts the Cape mountains in nearly every district. The mountain zebra (*Equus zebra*) lingers on a few ranges of the colony, along the Drakensberg, and as far east as the Lebombo Mountains in Swaziland. I have watched with the keenest delight a troop preserved on the farms of friends of mine in the Eastern Province, no great way from Port Elizabeth, where they were, of course, never shot at. The curious bontebok (*Alcelaphus pygargus*), numbered of old in the range of Free State and Cape Colony by hundreds of thousands, is at the present moment represented by one single troop, long preserved on the estate of a Dutch gentleman, Mr. Van der Byl, near Cape Agulhas. These are the last of their race. The white-tailed gnu is almost in the same extinction, although thirty years ago inordinately plentiful. The fecund springbok is still fairly abundant on the karroos, and especially upon the northwest plains, near the Orange River. Some of the smaller antelopes, such as the common bluebok, steinbok, duyker, klipspringer, oribi, and blaauwbok still remain here and there in fair numbers. The animals here enumerated form the poor remnant of the once innumerable Cape fauna; and, but for the timely measures of protection passed by the Cape Government, and the private exertions of some of the colonists, most of these animals would by this time assuredly have disappeared from the country south of the Orange River. In Natal very much the same state of things prevails, and beyond Natal, in Zululand, Amatongaland, and Swaziland, the big game have practically vanished.

In 1890-91 I travelled through the whole of Bechuanaland, part of the Transvaal, much of the Kalahari, and Ngamiland. Here I found the condition of the game even more deplorable in many ways than in Cape Colony.

Guns are now plentiful in every part of the interior, and native gunners—next to the Boer skin hunters, the most reckless of all destroyers of animal life—are incessantly at work. Nearly the whole of British Bechuanaland and the Protectorate, as far as Khama's country, have now been denuded of heavy game. Here and there in the former territory a few troops of hartebeests still eke out a shuddering existence. But all the prominent members of that wonderful collection of animal life depicted by Cornwallis Harris has vanished. The plains were tenantless, save for the small buck (steinbok and duyker). On the Maritsani River, where Harris had found himself surrounded by bellowing crowds of every kind of rare game, only a troop or two of hartebeest were left. On the Molopo—Gordon Cumming's "darling little Molopo"—where that great hunter, clad in his Highland kilt, and with bare arms and legs and vast red beard, had pursued the lion, buffalo, and other game, there remained but a reed buck or two. English sportsmen at Mafeking and Vryburg were now hunting with foxhounds the jackal and the duyker, where their predecessors had not long before pursued all kinds of noble beasts of chase, from the giraffe down to the eland.

To the westward, on entering the South Kalahari, I found gembsbok, hartebeest, koodoo, wildebeest, and a lion or two still maintaining a sanctuary. Even here, however, the assaults of native hunters cannot be long resisted.

In short, I may be said to have, notwithstanding proclamations and attempted game laws, in these remoter portions of the South African interior the great game is disappearing day by day and hour by hour, and apparently will soon be little more than a mere reminiscence.

Quite recently a project has been set on foot among some prominent sportsmen and naturalists, which, if successfully carried out, may help in some degree to preserve many of the rarer species of the African mammalia—especially the larger antelopes—in some districts of the interior.

The idea, which is at present inchoate, is to secure if possible a grant of a tract of land—some 100,000 acres—in Mashonaland or the adjacent territories, fence it in, and form a park in which small herds of game may be enclosed. It would not be difficult to procure the young of many kinds of African game and rear them in such a park, and drafts could be sold off from time to time to supply the collections of European and other countries. Whether the help of the Chartered Company or of the British Government in South Africa can be enlisted for such an object, which is a matter of vital importance; whether the scheme, if brought to a head, can be made self-supporting, which is also an important consideration; these are questions hardly within the scope of this article.

But that any undertaking, having for its object the rescue and preservation of the disappearing fauna of South Africa, will have in this country the sympathy of all true lovers of nature and animal life, is, I think, a fact beyond the scope of argument.

H. A. BRYDEN.

THIS BUCK WAS FOND OF MUSIC.

He Made Jeff Wilmarth Play the Bugle, but Carried His Fun Too Far.

"I don't believe that any body ever had such a time gathering in a deer as Jeff Wilmarth did once up in old Canaadea," said Col. Noah Parker of Gardeau, Pa. "In the old general training days Jeff used to play the bugle, and he could make it hum and not half try. A general training in Allegany county didn't amount to anything if Jeff wasn't there to wake the martial spirit of the people with strains from his bugle, and at the big dance that always wound up the festivities Jeff and his bugle had to be present as well or the music wouldn't be complete.

"One time Jeff had done his duty with his bugle all day and all night at a general training and the closing-up dance, and started for home early in the morning, footing it through the woods. There were plenty of deer in old Canaadea then, but Jeff wasn't any hunter. As he trudged along he thought he would make things seem less lonesome, and so he struck up a tune on his bugle. He said the tune he played was the 'Last Rose of Summer,' but anyhow, just as he was along toward the end of it a snorting, big buck came bounding out of the bushes right toward him. Jeff saw the buck coming, but supposed it would turn tail and tear away in some other direction as soon as it saw him. The buck didn't do anything of the kind. It slowed up a little as Jeff finished his tune, but when the music ceased it made for Jeff more positive than ever. All that Jeff could do was to haul up and whack the buck over the head with his bugle. The buck dropped as if shot, but was up again about as quick as it had gone down.

"Straight for Jeff the buck sprang again. Jeff was quick with ideas. He struck up on his bugle 'Among the Rigs o' Barley,' soft and slow. As he played he walked backward. The buck followed him like a prancing colt, keeping time with the music. By and by Jeff had to stop to get some more wind, but the instant the music ceased the buck laid back its ears, raised the bristles on its neck, and made a savage break for Jeff. Jeff clapped the bugle to his lips without wasting any time, and started in on 'The Fisher's Hornpipe.' That's a mighty lively tune, and the buck put off his warlike front and looked pleased again, while he skipped and jigged. Jeff said, to beat a tipsy raftman.

"But no man ever lived who could tongue 'The Fisher's Hornpipe' for any length of time on an old-fashioned bugle, and Jeff was obliged to let up after awhile. He had to get a few gulps of fresh wind or perish in the attempt. But the buck was there for fun. The situation was entirely too solemn for him without music, and he bristled up and went threatemingly for Jeff again as soon as Jeff stopped to grab some breath. Then Jeff blew away again, and this time selected that good old Methodist stand-by, 'Plunged in a Gulf of Dark Despair.' This tune, Jeff thought, would express my feelings just about right, being slow and without any jerk to it, would kind o' let him ease up on his lungs a little. As soon as the horn let loose again the deer got over his mad once more. He made a few efforts to prance to the tune, but couldn't get step to it. He stopped, took a new start, but with no better success. Then his hair began to rise again. Jeff saw that the buck wasn't pleased with that tune, and he played it a little faster and put some flourishes on it.

"That was what the buck wanted, and pretty soon he was stepping it off like a dancing master. All this time Jeff had been walking backward pretty fast, and had travelled something like two miles. Half a mile further on was his house. He thought that if he could hold out that long he would show that unreasonable buck a trick or two himself. It wasn't any easier to play 'Plunged in a Gulf of Dark Despair' in jig time than it would have been to swing his wind on 'The Devil's Dream' or 'Money Musk.' So Jeff made up his mind that he could gradually slow down on the tune and get back to its proper motion without the buck, who was now all taken up with himself and his steps noticing the change. Jeff did so, but the buck had too good an ear for music and too lively a sense of dancing to be fooled in that way. When Jeff got back to the proper level with 'Plunged in a Gulf,' the buck came to a sudden standstill. He looked at Jeff as if he couldn't believe his ears. Then his dander rose worse than ever, and he went for Jeff with a hump and a snort.

"This charge of the buck scared 'Plunged in a Gulf' all out of Jeff, and before he knew it he was filling those woods with 'The Devil Among the Tailors,' as loud and as lively as that old bugle ever made it bellow at a general training dance. It hit the buck just right, and he more than waltzed around and enjoyed it. At last the funny procession came right out onto Jeff's clearing. Jeff danced the fascinated buck plumb into his barn, and just had strength enough left to shut the door. Then he wilted like a frosted tomato plant. He declared to his dying day that he didn't get all his wind back for two days. When he did get it back he went and put a rifle ball through the buck, and was revenged."

HE WAS AFTER WILD FOWL.

But Pocky Griswold Says that He Killed a Bear, Though a Hog Turned Up Missing.

"Time me and Doc Phillips of Penn Yan and Oc Morse and Harry Morse was down in Hyde county, North Carolina, hunting ducks and geese and swan," said Pocky Griswold, Hammondsport's ex-lumber king, naturalist, and all-around sportsman, "I migut just as well have bagged three bears one day if Oc Morse hadn't broke in on me and got scared and begged me to quit. I knocked one over in spite of Oc, but I ought to have had the whole three.

"We were scattered around in the reeds, hiding, waiting for ducks or geese or swan to come in, and, of course, weren't loaded for bear. I knew there was plenty of bear in that country, but hadn't thought anything about 'em. While I was crouching down in my reed blind, expecting every minute to get my work in on some ducks or geese or swan, I saw the reeds swaying and swishing and heard them cracking off to my right a hundred yards or so.

"'It'll be a mess of Mud Pond eels,' says I to myself,' that Oc Morse has got tired of waiting in his blind, and has come sloshing around up here, where he thinks he can do better, and he'll scare every duck or goose or swan away before it gets within nine miles of us!'

"I felt considerable put out, and crept along through the thick growth toward the spot where the reeds were in commotion, to get within speaking distance of Oc, so as to tell him to lay low and keep still, if he wanted us to get even a sight of duck or geese or swan. I hadn't gone far, though, before I found that I had been accusing Oc wrongfully. I got a glimpse through the reeds, and first saw one big bear, then another, and then another, making their way along, snorting and growling and grunting. Two of 'em were black bears, and the other was cinnamon color. If it had been Oc himself I couldn't have been any madder, for I knew that them bears would be just as likely to scare duck or geese or swan away as Oc would.

"'Thunder take it!' says I. 'I s'pose I might as well kill 'em and be done with it! There ain't any duck or geese or swan in sight, and the sound of the gun 'll be out of here and the smell of the smoke be gone before any of them fowl comes along more than likely. It won't be a bad idee, anyhow, to bag them three bears, long's there ain't anything else in sight.'

"So I took out my duck or geese or swan shot cartridges and shoved in buckshot. I was just on the point of knocking over the biggest bear, a snorting big black fellow that stood dern near five feet high, when somebody grabbed hold of my shoulder. I looked around, and there was Oc Morse looking scared.

"'What—be—they—Pocky?' says he.

"'Bear!' I says. 'Three rip-tearing big bears! Set down there and see me bag 'em!' I says.

"'Thun-der-a-tion!' says he, getting more scared every second. 'Don't—bother—'em! Let's—run!' says he.

"'Run!' says I. 'All the running I'll do is to run a few ounces of lead into each o' them bears!' I says.

"Just then the big black fellow at the head of the three saw us, and he lifted up the bristles on his back, gave a snort that made Oc Morse jump four feet in the air, and rushed toward us like a runaway engine. Oc grabbed hold of me and hollered for help. The bear was about thirty yards away, and in spite of Oc's holding me and dancing around like a wild injin, I blazed away. The bear jumped in the air clear to the top of the tallest reeds—and they stood pretty high—and then my head turned a double summerset in the air, and fell on his head in the soft marsh. His head sank in clear to his shoulders, and there he stood, like a clown doing a trick in a circus. He gave a few kicks that must have been a million of them, and they went at the bears like mad. The hum of their wings sounded like a storm, and I concluded that instead of one nest the cubs had struck a dozen. The bears' thick hair and hide protected them, but occasionally a bee got in a good licks, and then the bears would jump around and slash at himself with his paws. The honey was going fast, and I was thinking of pulling quietly away toward my camp, when one of the cubs suddenly climbed about forty feet into the air, and with a scream of terror began to tear himself on the ear. Evidently a bee had got into his head and stung him, and the pain was awful. Instead of becoming quiet he got worse, and turning on his little enemies, he began to beat them down with his paws.

"Meantime his brothers were getting in their work with the honey and didn't seem to notice the one in pain. When they did, however, they ceased their robbery and looked at him with broad grins on their faces. Suddenly each gave a howl and then began the same performance that the first bear had gone through. I laughed until I was tired at those three cubs knocking the bees right and left. In ten minutes they had so used up the bees that comparatively few of them were left. The exercise seemed to relieve some of the pain, and the cubs went to work on the honey once more.

"The hole was evidently pretty large, and one of the cubs got up on the tree and stuck his paw into it and handed some honey out to his brothers. It was a good time for camp again and then I saw this fellow jump off the tree and make rapidly toward the swamp. I stopped a moment to watch him. If I hadn't you would never have heard this story, and the fate of the bear family would have been lost in obscurity. The other bears started right after their brother, and just as they reached the end of the tree the one ahead grunted two or three times, and each cub went down on all fours and the leader peered around the trunk. In a moment he grunted again, and the two in the rear made a double-quick march for the other end of the tree. Here they broke from the limbs, three good-sized cubs, and returned to their brother. He took one of the sticks, and then the trio instantly doubled the end of the trunk and the clubs went up and came down upon the ground with a thump. Before I had time to wonder what they were at I heard a buzzing sound that meant but one thing, rattlesnakes.

"One rattle after another went off and it was plain that the cubs had struck a big nest of them. The fight was now on in great shape. The bears were slashing away at the ground like crazy and jumping back and forward to avoid the snakes. I couldn't see well from my position and I crept slowly around toward the rocks where the bears had first seated themselves. I got there all properly and then things were very plain.

"The ground was covered with the rattlers, and the cubs had a pretty big job on their hands. Every time a club came down it hit a snake, but the buzzing still went on, and from out the hollow butt of the tree came rattler after rattler, who would go right to work on the invaders. As long as the bears could keep the snakes far enough away to avoid the full force of their fangs there was little danger of the poison getting beyond their thick hair. The only hope the rattlers had to win the fight was to strike some of the more exposed places, like the head. The cubs were in the fight for good, and they went at it in a way that pleased me mightily. I sort of looked upon these cubs as my particular friends, and had I suspected how the business would end I would have taken a hand myself.

"For ten minutes the bears' clubs went up and down as regular as the ticker of that clock there. If the snakes had got in any poison it hadn't showed itself. I noticed that no more of the varmints came out of the tree and presently one of the cubs threw down his club and walked back a short distance along the tree and sat down with his back against it. His two brothers, after stirring through the heap of dead snakes, followed him and leaned against the tree, the three facing the rocks and motioned and pointed toward the rattlers.

"While I was looking on at this conversation I saw an immense rattler come rapidly from the tree, raise its head and look around until it got range of the cubs. Then it turned and glided into the midst of them in their tracks, too, but I said that if there was going to be any wild bear hunting around there the rest of the party must have some of the fun, and got Pocky to let the other two live so that we could go out next day and have some sport with them.

"'Don't—be—too—sure,' says the boys, etc.' said Pocky, 'and after supper to-night I'll tell 'em a story about wild boar hunting that'll make their hair curl!'

"So I didn't say a word. After supper that night we spread around the fireplace at Hodge's, and I saw that Pocky was getting ready to spring his wild boar story on the boys. Just then Hodge came in. We knew something had gone wrong, right away.

"'What's the matter, Hodge?' said I.

"'Well, sir,' said he, 'some orn'ry cuss has gone and killed that crack boar of mine, and if I can find out who he is I want to tell you that this neck o' Hyde county 'll be a leetle too tarnal hot to hold him!'

"Pocky didn't tell his wild boar story. Not that mighty. I don't know whether he ever told it at all or not. But this is it."

BURIED THE FOUR BEARS.

They Were Circus Animals, and Unused to the Ways of the World.

GETTYSBURG, PA., Oct. 20.—One day several months ago Jake Banks entertained the loafers at the grocery store at Cross Corners with a remarkable tale of four bears that he had seen in the South Mountains. He said they played ball and performed various gymnastic feats on a wild grapevine. Before he had concluded Banks was called away. Last Sunday, however, he returned, and on Monday evening he related the following:

"Wall," he said, "you know there was an old she bear and three half-grown cubs in the travelling animal circus that I saw on Crow Nest Hills, but it wasn't for several weeks that they exhibited in my region again, and then it was their farewell appearance.

"I had moved my camp several miles eastward on the second hill, and was doing a little nosing around for some city chaps. I had a mighty close call with a lot of wildcats, run foul of several other dangerous animals, and once got lost in a big cave—but I'm off the track that leads to the bear family. Wall, one morning I got out just at daybreak and struck across to a place I had heard of, about two miles away. After looking it over I worked around in a circular direction toward my camp. Late in the afternoon, and when I was still an hour's tramp from my tent, I struck a place where there were some of the biggest trees I've ever seen in my life. They were a kind of fir and went up forty or fifty feet before there were any limbs. I stood and looked around in amazement. It was one of the prettiest places I had ever stumbled upon in the mountains. The grass was short and very thick, and the few boulders that lay scattered around were covered with moss.

"It struck me that this would be a good place for my camp. I had some crackers and cheese in my pocket and I sat down on the nearest rock and began to eat them. I was very tired and might have been half dozing, when all of a sudden I was startled by a sharp crack. It raised me to my feet mighty quick, I tell you. I looked carefully around, but did not see a thing suspicious. Five minutes passed, and I had settled back on the rock and was half asleep again when there was a second crack, and as I raised my head I saw something dark and large drop to the ground from a small hickory tree that grew about 150 feet away.

"Of course, it could be only a bear or a wildcat, and as I wasn't allfired anxious to make the intimate acquaintance of either, except over the muzzle of a gun, I slid gently from the rock to the ground and waited. In a minute or so I heard a sort of noise back of where I had seen the dark animal drop, and there, from the limb of a large hickory, I saw swinging three half-grown bears. I knew instantly it was my gymnastic family, and putting aside the rifle I fled myself and prepared to watch them.

"The cubs had thrown down the monkey shines I told you about the last time; swinging like you've seen fellows at the circus. Presently they came down the tree and came slowly across the grass toward me. The little wind that was blowing was from them to me, or they would certainly have scented me. When they came to two big rocks, about 100 feet from where I lay, they climbed up and sat down. All this time I was wondering where the old she bear could be. She had always watched her children mightily close; now they were alone and seemed to be having a fine time.

"Presently they got off the rocks and one went out a little distance and dropped on all-fours. Then the other two ran toward him on their hind feet, and the leader jumped on his back and vaulted over him. Then they went down likewise and the first cub jumped over them. They were playing leapfrog, as well as any boys I ever saw, and they were enjoying it.

"In the various changes of position in the game one of the hickory nuts had been hit and evidently been blown over several years before. It had been one of the biggest of the big fellows that grew around the place, and it was still well preserved. The smaller boughs had rotted away, but the trunk and large limbs were black and hard. Instead of fixing himself for his brothers' jumps, he remained on his hind feet, looking hard at the fallen fir. The other cubs kept on jumping, and when they reached him they also began to watch the tree. I took a hand in the looking now myself, but although I have a mighty good pair of eyes I couldn't see a thing out of the ordinary.

"At last the cubs seemed satisfied, and with a grunt the largest made at the tree, followed by his brothers. They began to work around the trunk about fifty feet from the butt, and in a moment I saw something like a cloud rise from the ground and circle around their heads. Now I understood the situation. They had found a bees' nest and were for stealing the honey. They would put their paws into the cavity in the tree, bring out great lists of honey and gravedly lick it off with their tongues. If there is one thing, you know, that bears like, it is honey, and they will submit to any quantity of pain to get it.

"Meanwhile, the bees were not idle, you just bet. There must have been a million of them, and they went at the bears like mad. The hum of their wings sounded like a storm, and I concluded that instead of one nest the cubs had struck a dozen. The bears' thick hair and hide protected them, but occasionally a bee got in a good licks, and then the bears would jump around and slash at himself with his paws. The honey was going fast, and I was thinking of pulling quietly away toward my camp, when one of the cubs suddenly climbed about forty feet into the air, and with a scream of terror began to tear himself on the ear. Evidently a bee had got into his head and stung him, and the pain was awful. Instead of becoming quiet he got worse, and turning on his little enemies, he began to beat them down with his paws.

"Meantime his brothers were getting in their work with the honey and didn't seem to notice the one in pain. When they did, however, they ceased their robbery and looked at him with broad grins on their faces. Suddenly each gave a howl and then began the same performance that the first bear had gone through. I laughed until I was tired at those three cubs knocking the bees right and left. In ten minutes they had so used up the bees that comparatively few of them were left. The exercise seemed to relieve some of the pain, and the cubs went to work on the honey once more.

"The hole was evidently pretty large, and one of the cubs got up on the tree and stuck his paw into it and handed some honey out to his brothers. It was a good time for camp again when I saw this fellow jump off the tree and make rapidly toward the swamp. I stopped a moment to watch him. If I hadn't you would never have heard this story, and the fate of the bear family would have been lost in obscurity. The other bears started right after their brother, and just as they reached the end of the tree the one ahead grunted two or three times, and each cub went down on all fours and the leader peered around the trunk. In a moment he grunted again, and the two in the rear made a double-quick march for the other end of the tree. Here they broke from the limbs, three good-sized cubs, and returned to their brother. He took one of the sticks, and then the trio instantly doubled the end of the trunk and the clubs went up and came down upon the ground with a thump. Before I had time to wonder what they were at I heard a buzzing sound that meant but one thing, rattlesnakes.

"One rattle after another went off and it was plain that the cubs had struck a big nest of them. The fight was now on in great shape. The bears were slashing away at the ground like crazy and jumping back and forward to avoid the snakes. I couldn't see well from my position and I crept slowly around toward the rocks where the bears had first seated themselves. I got there all properly and then things were very plain.

"The ground was covered with the rattlers, and the cubs had a pretty big job on their hands. Every time a club came down it hit a snake, but the buzzing still went on, and from out the hollow butt of the tree came rattler after rattler, who would go right to work on the invaders. As long as the bears could keep the snakes far enough away to avoid the full force of their fangs there was little danger of the poison getting beyond their thick hair. The only hope the rattlers had to win the fight was to strike some of the more exposed places, like the head. The cubs were in the fight for good, and they went at it in a way that pleased me mightily. I sort of looked upon these cubs as my particular friends, and had I suspected how the business would end I would have taken a hand myself.

"For ten minutes the bears' clubs went up and down as regular as the ticker of that clock there. If the snakes had got in any poison it hadn't showed itself. I noticed that no more of the varmints came out of the tree and presently one of the cubs threw down his club and walked back a short distance along the tree and sat down with his back against it. His two brothers, after stirring through the heap of dead snakes, followed him and leaned against the tree, the three facing the rocks and motioned and pointed toward the rattlers.

"While I was looking on at this conversation I saw an immense rattler come rapidly from the tree, raise its head and look around until it got range of the cubs. Then it turned and glided into the midst of them in their tracks, too, but I said that if there was going to be any wild bear hunting around there the rest of the party must have some of the fun, and got Pocky to let the other two live so that we could go out next day and have some sport with them.

"'Don't—be—too—sure,' says the boys, etc.' said Pocky, 'and after supper to-night I'll tell 'em a story about wild boar hunting that'll make their hair curl!'

"So I didn't say a word. After supper that night we spread around the fireplace at Hodge's, and I saw that Pocky was getting ready to spring his wild boar story on the boys. Just then Hodge came in. We knew something had gone wrong, right away.

"'What's the matter, Hodge?' said I.

"'Well, sir,' said he, 'some orn'ry cuss has gone and killed that crack boar of mine, and if I can find out who he is I want to tell you that this neck o' Hyde county 'll be a leetle too tarnal hot to hold him!'

"Pocky didn't tell his wild boar story. Not that mighty. I don't know whether he ever told it at all or not. But this is it."

BURIED THE FOUR BEARS.

They Were Circus Animals, and Unused to the Ways of the World.

GETTYSBURG, PA., Oct. 20.—One day several months ago Jake Banks entertained the loafers at the grocery store at Cross Corners with a remarkable tale of four bears that he had seen in the South Mountains. He said they played ball and performed various gymnastic feats on a wild grapevine. Before he had concluded Banks was called away. Last Sunday, however, he returned, and on Monday evening he related the following:

"Wall," he said, "you know there was an old she bear and three half-grown cubs in the travelling animal circus that I saw on Crow Nest Hills, but it wasn't for several weeks that they exhibited in my region again, and then it was their farewell appearance.

"I had moved my camp several miles eastward on the second hill, and was doing a little nosing around for some city chaps. I had a mighty close call with a lot of wildcats, run foul of several other dangerous animals, and once got lost in a big cave—but I'm off the track that leads to the bear family. Wall, one morning I got out just at daybreak and struck across to a place I had heard of, about two miles away. After looking it over I worked around in a circular direction toward my camp. Late in the afternoon, and when I was still an hour's tramp from my tent, I struck a place where there were some of the biggest trees I've ever seen in my life. They were a kind of fir and went up forty or fifty feet before there were any limbs. I stood and looked around in amazement. It was one of the prettiest places I had ever stumbled upon in the mountains. The grass was short and very thick, and the few boulders that lay scattered around were covered with moss.

"It struck me that this would be a good place for my camp. I had some crackers and cheese in my pocket and I sat down on the nearest rock and began to eat them. I was very tired and might have been half dozing, when all of a sudden I was startled by a sharp crack. It raised me to my feet mighty quick, I tell you. I looked carefully around, but did not see a thing suspicious. Five minutes passed, and I had settled back on the rock and was half asleep again when there was a second crack, and as I raised my head I saw something dark and large drop to the ground from a small hickory tree that grew about 150 feet away.

"Of course, it could be only a bear or a wildcat, and as I wasn't allfired anxious to make the intimate acquaintance of either, except over the muzzle of a gun, I slid gently from the rock to the ground and waited. In a minute or so I heard a sort of noise back of where I had seen the dark animal drop, and there, from the limb of a large hickory, I saw swinging three half-grown bears.
