FINANCIAL AND COMMERCIAL.

WEDNESDAY, Oct. 23.

A time of excitement only second in point of intensity to that of yesterday passed in Wall Street during business hours to-day. Stock Exchange business itself was conducted more quietly than it was on the preceding day and dealings in securities, at least during the greater portion of the day, evinced a disposition on the part of speculators and financial interests generally to view the situation with more composure. Nevertheless the current feeling was one of continuous and decided uneasiness and declines in prices again occurred, bringing the closing level of prices down to a point considerably below the lowest made in the last great depression in the stock market in 1903. Quotations of stocks opened at large and general recessions from their last figures of yesterday, a phenomenon which surprised nobody in view of the news altogether too prominently displayed in at least one of the morning newspapers that trouble was feared at the Trust Company of America and that arrangements had been made looking forward to the protection of the company. Before the Stock Exchange opened a long line of depositors was gathered before the doors of the institution in question and it was manifest that the same sort of occurrence as that which took place yesterday regarding the Knickerbocker Trust Company was to be repeated. Beliefs of this sort soon became a certainty and a run on the Trust Company of America was in progress up to the usual time for closing business. The stock market was, however, inclined to resist this adverse influence, deriving a large share of this support, unquestionably, from the steady and incessant purchases of stocks made to "cover" short contracts. Those speculators who have in the past indulged freely in commitments of this sort entertained the opinion, apparently, that the occasion offered an opportunity for them which should not be neglected for them to secure their profits. The market was, however, again thrown into confusion by the announcement of the suspension of the Security Investment Company of Pittsburg, the organization having in charge the financial end of the greater portion of the Westinghouse electrical enterprises, and prices again broke under another outburst of liquidation which emanated specifically as it was understood from the city of Pittsburg. The shutting up of the company involved presumably a crisis in the affairs of the Westinghouse concerns and the price of Westinghouse Electric stock fell during the day $45 a share. The decline in the price of the stock since the first of the month has been over $100 a share. Again, however, the market recovered, but became weak shortly before the end of business because of more or less unpleasant developments in the money situation. This money situation was, in fact, the most disturbing feature of the day from a strictly Stock Exchange point of view. Although a larger number of banks and lending institutions appeared through their brokers on the floor of the Stock Exchange to-day than did yesterday offering financial accommodation, the demand for money still so exceeded the supply as to result in a continual advance in call money rates until 125 per cent. was paid finally for an overnight loan. It appeared to be the case that much higher rates than these and indeed practically any rate would have been paid by borrowers if the money required by them could have been secured, and according to common observation there were demands for money estimated at between $3,000,000 and $6,000,000 that were still unsatisfied as brokers left the floor of the Stock Exchange for the day. This meant, of course, that there were brokers who were compelled to make forced overdrafts upon their banks; and that such conditions should have arisen or even that as high as a 50 per cent. rate should have been paid to-day on the Stock Exchange was regarded as disgraceful in the best quarters of the banking world. It is beyond question that there is money enough at present in the city, especially after the large deposits made here by the Secretary of the Treasury, to supply all the necessities of Stock Exchange commission firms. But the miserable policy seems to have been adopted at this time by many of the smaller financial institutions, as on occasions not unknown in the past, of hoarding their money and absolutely declining to consider the exigencies of the situation.

All that could be said regarding the affairs of the Trust Company of America to-day—that of course figured much more prominently in the public eye than did the complications on the floor of the Stock Exchange itself—was that the company was regarded in high banking quarters as being absolutely solvent and that with the assistance that would be furnished to-day was likely to meet in full the claims of depositors as they are now being rapidly presented. The effects of the receivership that is doubtless impending for the Westinghouse companies cannot fail to be felt in the distinctively business circles of the country, and they will probably promote that contraction of business that is now so plainly in progress. Mention deserves to be made of the fact in connection with matters referring to the electrical industry that, very curiously, the Amalgamated Copper shares were among the strongest of those dealt in to-day; and reason for this appeared to be a rumor that very heavy sales of copper had been made abroad by one of the large metal selling organizations. It is established that exports of copper have greatly increased in the last few weeks. It is believed, however, that these exports do not represent an enlarging foreign consumption of the metal, but only shipments of the commodity to countries where they can be "carried" in a financial way easier than in our own country.
