FINANCIAL NEWS AND COMMENT

Reactionary Depression of Stocks Carried Further—Some Exceptions.

TRADING IS PROFESSIONAL

Selling pressure applied rather conspicuously by the professional trading element maintained the volume of activity in the stock market yesterday up to the recent average. The course of prices was a continuation of the reactionary movement which developed on Tuesday following the liberal realizing sales conducted on Monday and toward the end of last week.

Offerings seemed to be less in the nature of profit taking and more distinctly the expression of the trading theory that the recent upturn in the share list represented nothing substantial in the way of constructive effort. The aspects and circumstances of the session did not establish the validity of this hypothesis.

The upward trend of prices in the last fortnight has been materially facilitated by precisely such intervals of trading bearishness. At the same time it was equally inferential that the market was reflecting the restraining influences of the uncertainties which have done so much in the last few months to limit any stock market response to the remarkably profitable expansion which has developed in trade and industry. From the outset of the session professional endeavor was quite confidently exerted against quoted values.

In important quarters, where long range views are always considered, ultimate peace in Europe is regarded as a factor which must be admitted to all reckonings, but the speculative community is now reverting to it every other day or so as something which should be at once discounted. There was a revival of speculative talk about the peace propaganda of which Germany has been the inspiring source, but it is doubtful if the activities of the stock market denoted anything more than trading tests of the immediate position.

More was said about the apparent lack of public support for stocks on the intervals of advance than about the posture of the European war. The persistent backwardness of the copper stocks was commented on more widely than the rather definite indications that current belligerent contracts for military supplies are attaining considerable dimensions, despite the assumptions of a few weeks ago that buying for war purposes was approaching a termination. The weekly reviews of iron and steel conditions reported large ammunition orders placed and pending, although noting that in other respects forward buying was pressing less heavily on capacity and that a more satisfactory balance between demand and supply was implied in the shading of prices from extremely high figures.

There was no striking uniformity in the Stock Exchange price movement. Indeed there was noticeable irregularity, although the general trend was down. Reading was advanced aggressively to a new high level in the late dealings and rails were steady on the whole throughout the day. General Electric was a strong exception to the heaviness of most standard industrials and the selling of the copper shares attested the trading interpretation of their prolonged sluggishness. War stocks and related descriptions declined the most extensively, but the proof of the market situation and of market tendencies, if the market has any tendency, depends on more than the transactions of one or two days.

Very little attention seemed to be engaged with political news, domestic or foreign, except in so far as it bore on the contingencies of peace abroad. The weekly report on crop weather conditions showed that the season was still backward. The new gold importations from Canada were increased by $2,250,000 to about $8,750,000, but there was no outward sign that Wall Street regarded these shipments as having any present significance for quoted values.
