FINANCIAL NEWS AND COMMENT

Market Refuses to Weaken—Traders Cautious Owing to Rail Labor Situation.

STRENGTH AT THE CLOSE

Outlook for Investors Is Encouraging, With Bargains for Idle Money.

A direct reflection of the country's enormous earning power is presented in the course of the current stock market, which refuses to weaken, either on the suggestion of adverse developments or upon actual passing bearish arguments. In yesterday's short session in the Stock Exchange the apparent gravity of the railroad labor situation found expression only to the extent of checking bullish activity and in attracting bearish pressure from unimportant professional traders. The operations of the latter, at times, carried prices off fractionally, while covering in the last half hour by traders who did not care to go home with outstanding short contracts gave the closing a strong and somewhat animated appearance.

Substantial market interests refused to admit that the railway strike of countrywide proportions would not upset for a time the current advancing tendency in prices, but they were willing to go on record with the prediction that even a strike of such size would not change the course of market values so far as their ultimate tendency was concerned. They asserted, moreover, that in their opinion stocks were on the way to discount a period of business expansion incident to another year, at least, of the European war, and that in their consideratorions they had in mind an additional bullish argument in their belief of a Republican victory in November. As to the high prices for grain and cotton, which are based on indications of much smaller final harvests than reported last year, they insisted they could not be twisted into bearish influences on stocks because of the surplus of such staple products from the 1915 yields and the increased profits this year's crops would give the agricultural community.

According to the well founded ideas of Wall Street optimists the outlook for holders of stocks is most encouraging. This cheerful view, nevertheless, does not afford a license for unbridled speculation in the Stock Exchange and outside markets, although it naturally suggests that cautious ventures for higher prices appear promising and that conditions are favorable for the investment of idle money in the many attractive securities that may be had at quotations which do not fully measure their intrinsic value.

In most of the commission houses the idea was put forth yesterday that current reactions were merely incidents of a bull market. Some theories may be run to a test to-morrow as a consequence of the latest developments in the railroad labor dispute.

In the greater number of instances, excluding some of the newer industrial flotations, the earning power of companies is fortified by increased property values. Herein lies one of the big reasons why sound securities are not particularly sensitive to adverse developments and why investment money is moving more freely into seasoned issues.

A conservative banker said yesterday that big earnings and greater property values provided him with all the bullish ammunition he desired in discussing the American investment field, and that he believed conditions in this country would so shape themselves along the basis of business and financial preparedness that even with the readjustments that must follow the end of the war our solid investment issues would retain the added actual worth which has come with the economic changes of the last eighteen months.

Returns of the Clearing House institutions, as reflected in the combined statement for the week just closed, showed no significant change from a week ago. Excess reserve decreased a little more than $2,000,000, aggregate reserve increased a little more than $5,500,000 and loans increased $11,190,000.
