FINANCIAL NEWS AND COMMENT

Prices Go Up on Wall Street's Belief a Railroad Tieup Would Be Averted.

STEEL IS AGAIN AT 99 3-8

Extra Dividend Declarations Add to Nervousness of Shorts.

The short interest in the current stock market is nervous and not at all sure of its position. This fact was exemplified in yesterday's Stock Exchange dealings, when indications of more favorable prospects for uninterrupted railway traffic next week were effective in bringing about sharp rallies in prices, the upward movement having the additional backing of extra dividend declarations by a number of copper metal producing companies.

In the last five minutes of business the advance was checked by a rumor circulated around the floor that in spite of the earlier advices from Washington that the outlook favored the enactment of legislation which would prevent a railroad tieup conditions had changed to an extent warranting the assumption that a walk out of railroad workers would take place on schedule time. The rumor appeared to be wholly based upon the imagination or hopes of bearish traders who had become frightened over the persistent strength in United States Steel and other issues.

Bearish rumors often crop out near the close of a bull day in stocks. Last year they took the form of another ship with Americans on board reported sent to the bottom.

Evidence of good buying developed in the early dealings, but the shorts did not follow the lead until the afternoon, when they made haste to cover. The short interest was reduced, but it was not eliminated, and after the close of business gossip in well informed speculative quarters suggested the idea that the size of the bear account outstanding was still large enough to be an effective factor in pushing prices to better levels in the event of overnight encouraging developments.

As a matter of fact there probably is a larger short interest in the current market than any reported in many months. It is particularly pronounced in Steel common, notwithstanding the advance in that issue yesterday to the high point of 99⅝, established a week or more ago. There is a big short interest in Reading and Union Pacific also; likewise in the copper shares.

On the reactions in the forenoon operations trading tended to contract, while on the afternoon rise increased buying was reported. Outsiders were more in evidence on the buying side, substantial Wall Street interests were noted as taking various attractive issues on the early recessions, and in banking quarters there was no change in the opinion held there that eventually securities prices would move to a materially better range and that irrespective of railroad labor conditions the outlook warranted the investment of funds in high grade stocks and mortgage issues. Dealings in the latter outside the Stock Exchange were heavier than recently noted.

There was no indication at any time in the session of investment liquidation or outside speculative selling because of the threatened strike. It was a market which lived up to the recent day to day statements and predictions made by the leading financial men in the Street and currently reported in this column. It reflected the strength of underlying conditions—the great basic factors which for weeks have made it a market to be talked about and remembered.

An advance in cotton, representing a rise of $3 a bale, was an incident that was without influence upon stocks, but the improvement in the grain market, which was based upon the more encouraging reports from Washington, figured with the bullish arguments on stocks. The Government's report on cotton as of August 25 showed a condition of 61.2 per cent. of normal as compared with 72.3 per cent. on July 25 and 69.2 per cent. on August 25 last year. The estimated yield, however, was above the final harvest of 1915, although far under the record yield of two years ago. The world's demand, including our own, for American cotton is estimated by Cotton Exchange men at 14,000,000 bales. Unfortunately, since August 25 there has been further apparent falling off in the condition of the plant.

There was no particular activity in foreign exchange, but German marks again moved to a new low level. Money was easy and in abundant supply, with distinct heaviness in rates on short term maturities.
