FINANCIAL NEWS AND COMMENT

Bears' Large Talkfest Brings No Important Offerings From the Public.

MARKET NOW STRONGER

Bank Statement and Steel Report Expected to Influence To-morrow's Prices.

Considerations of what might happen in the event of various theories developing into actual factors were effective in attracting professional pressure against values in yesterday's light session in the Stock Exchange. The movement was helped by end of the week realizing, but it failed to bring out important offerings from the public, which, indeed, was a buyer on the decline, while it failed also to change the attitude of the substantial Wall Street interests toward the market. The "big" men of the Street are not interested in passing declines in prices, but the sold out bulls are, and they are exerting themselves with their limited bearish arguments to bring about a more attractive buying level for the general list.

Operators for the decline put out for public consumption the suggestion that they were apprehensive over the outlook abroad in its relation to the American markets, but they could foresee the development of a change in the position of domestic copper from the further action of the British Government in strengthening its control of the market in Great Britain and they were able to figure upon an approaching collapse in our own economic strength.

The bears had a talkfest which was not based upon the logic of the situation. They even went to the extent of predicting a poor showing in the weekly bank statement. As a matter of fact the exhibit, which was published after the close of business, showed a heavy increase in the combined excess reserve of the Clearing House institutions.

None of the ideas put forth by the speculators for lower prices carried weight with the strong outside public, which merely strengthened its margins, except in cases where it decided to convert paper profits into cash on the theory that to-morrow's opening prices might afford opportunities to recover stocks at cheaper levels. There was no indication that the outsiders had any intention of retiring from the market for a definite period and no development in the day's news that the position of affairs in the United States warranted the assumption that any change was impending justifying a long sustained decline in stock market values.

Reports from the commercial agencies for the week presented every evidence of continued business growth and nothing upon which could be based a bearish construction of future market movements, either in trade or finance.

Declines yesterday and the readjustment in loans which has been under way throughout the last five days have placed the stock market in a stronger position than could be reported a week ago, but it is possible that the larger interests will endeavor to restrain an outburst of bullish enthusiasm for a time at least—perhaps until they are ready to prepare the market for another foreign secured loan in this country, a development that looms large for early in 1917 in view of the financial requirements of the Allies under another year of war, which now appears probable.

There may be less foreign buying in the American markets, but it is not conceivable that Great Britain, France and Russia can handle their own needs without further assistance from the United States. Buying may be less because of the closing of our doors to extension of credit on foreign treasury bills, but the chances are that there will be enough in the way of new orders to keep our manufacturers busy even after the present heavy volume of work on their books has been completed.

Both the favorable bank statement and the record breaking report of the United States Steel Corporation on its unfilled tonnage, as of December 31, showing a gain of more than 1,000,000 tons for November, came too late to figure as stock market influences, but it was thought the two factors would carry considerable weight in shaping the movement of prices in to-morrow's operations.

Excess reserve, which a week ago was at the lowest level since the establishment of the new banking law, increased upward of $33,000,000, while there was a heavy contraction in loans and an increase in actual cash of $27,364,400. In the last two weeks loans have decreased a little more than $85,000,000. The banking situation is strong.
