***The Changing Price Trend***

With possible slight reactions at intervals, it is likely that the broad trend of prices for investment securities during the present year will be upward.

Prices for standard income-bearing securities are now as low as they are likely to be for years, and believing that an exceptional investment opportunity is now present we have prepared a *Special Bulletin*, making specific buying suggestions that should be of value to anyone having funds immediately available for investment.

# COTTON MARKET UP SLIGHTLY AT CLOSE

## Trading Is Featureless and Situation Shows Little Change.

The cotton market yesterday was featureless and without particular change, business being largely give and take by local interests and a little outside selling early in the session. The market closed a point lower for March to 16 higher for the rest of the active list. At the opening and for a time thereafter the list was under scattered pressure, at one time selling 9 to 22 points lower, March being relatively easy, due to reports that considerable cotton was coming here for delivery on contract and advices from the South calling attention to poor existing spot conditions. The recent decline, however, had improved the list's general technical position, and when short covering appeared prices moved across Tuesday's final level.

Wall Street led in the buying. The early heaviness was in part a reflection of the heavy tone to securities and the easiness in foreign exchange. Manchester reports were pessimistic, although Liverpool cables were about as due and without particular market effect. After the opening of 10 points loss to 5 gain, the market was unsettled and easy, but by the start of the second hour was about unchanged from Monday's finals. Reports that several small Georgia banks had failed aided the bear element, as did unfavorable accounts from certain trade houses.

The market did little until toward the end of the third hour, when a flurry of covering developed on a report from Washington that Sir Charles Macara, the English cotton economist, predicted a serious situation should cotton acreage be cut 50 per cent, and that the only way to avert this was for Governments to buy all the surplus cotton and store it until required. The report was scoffed at by the majority on the floor. It is not believed that any Government is in a position to take such action. The market rose about 10 to 24 points net on covering by uneasy speculative shorts, later easing when more urgent demand had been satisfied. The close was steady and spot finished unchanged at 14.15 cents.
