Investors in Foreign Securities and Exchange should receive our WEEKLY FOREIGN LETTERS and SUPPLEMENTS regularly. The Current Issue is now ready.

New
German Industrials
Featured

IN the Current Issue of our Weekly Foreign Letter, we have devoted considerable space to a discussion of the Economic and Industrial conditions of Germany—supplemented by data on Hamburg-Amer. Line 4½s, Krupp 4s and German General Elec. 4½s.

AN intensely interesting article by Eugene Meyer, Jr., reprinted by special permission, entitled

WANTED — AN INTERNATIONAL SECURITY MARKET

will accompany the above Letter. Investors interested in Foreign Securities should write for it.

Simply request Letter No. 413, supplemented by Price List, quoting over 100 active Foreign Issues. Mailed without obligation.

Long Term or *Short Term Bonds*

Of two bonds—

ONE with forty years to run, selling at a comparatively low price and carrying a low coupon rate of interest, but yielding to maturity 8 per cent.

THE other, one of the newer issues, selling at around 100 and carrying an 8 per cent. coupon rate of interest, but with only ten years to run.

WHICH is the more desirable for the average investor?

IS the greater opportunity presented in the long term bond?

The point in question is covered at length in our Bulletin T-61, a copy of which can be had merely for the asking.

FINANCIAL NEWS AND COMMENT

Action of Stock Market Indicates Readjustment Period Not Over.

MOVEMENTS IRREGULAR

Government's Plan to Help Railroads Regarded as Step to Aid Business.

The Reserve Board makes this comment on events in business and banking in its survey of developments in the fiscal year just ended: "The spring months of 1921 would seem, in the light of information now available, to be a period of approach to equilibrium in certain lines of business and of preparation for recovery from the depressed conditions that had developed." If the stock market is any guide, pointing ahead to future occurrences, it is to be said that the period of readjustment is continuing from the spring months into the months of summer. Stocks have not yet denoted any material change of processes of liquidation in trade or of an irregular tendency of manufacturing and distribution, which became prominent last winter. In the last week there occurred on one day a sharp recovery of prices, reaching from 2 points upward to 10 points among the more active shares. That swing, however, was followed immediately by a new depression of values, which comprised railroad and industrial stocks within the area of pressure. A summary of last week's doings could be limited to the statement that, except for one or two days of rapid short covering, stocks continued to reflect factors of uncertainty more than forces of a positive constructive character.

Nevertheless, there are to be seen some plain influences, the application of which to better business will appear later on. The Government is setting out definitely to do its duty by the railroads. The railroad union leaders in a half-hearted fashion have called for a referendum of members on the proposal whether or not to accept prescribed wage reductions, feeling certain that the cuts will be accepted without serious strikes.

Governmental Aid to Railroads.

The Government's part in correcting a deplorable railroad financial situation is to be done through advances of $400,000,000 to $500,000,000 to the roads, chiefly to liquidate capital expenditures made from earnings during Federal control. The plan provides that there shall be no delay while endless details of claim and counter claim are being paired off. The roads are to get the money during the next six months and to the extent that obligations due the Treasury from the railways exceed obligations from the Treasury to the carriers, the latter are to deliver bonds at 6 per cent. to the Government, maturing in ten years or so.

The value and significance of that plan goes far beyond its direct application to the railroads. The lack of ready money has crippled the carriers, preventing them for many months from adding to equipment and making needed repairs. But the greater damage from a cash shortage, cash which should have had earned but could not get into their treasuries, has been done, perhaps, to railroad creditors, those corporations which sold goods and services to the roads in the last three years and could not get paid. Not only has millions of dollars of working capital of coal and equipment companies, lumber companies and contracting firms been tied up, but loans entailed in work done for railroads have had to be carried along.

With the railroads in position to pay old bills and able also to get better net earnings through wage reductions and operating economies, there seems to be reason to accept the attitude of the Secretary of the Treasury that the plan for advancing funds to the roads will help general business.

Steel Buying in August Expected.

The steel trade is looking for an increase of railroad steel buying by August 1, but as it is of a character forced by necessities and not by the free play of effort to extend facilities and enlarge plants, it is difficult to see indications of broad recovery. In fact, the steel and iron industries appear, more than others probably, to illustrate the Reserve Board's observation about the spring months' preparation for better things. The period of preparation evidently has some time to run. The record of pig iron production in June was the poorest of any month since January, 1908. That means that the depression of steel and iron last month was comparable to the depths of a panic period, and last week's reduction of prices from $4 to $12 a ton suggests that strenuous efforts are being made to awaken sluggish consumers.

In scanning railroad news, seeking for its relation to news of other business enterprise, one becomes more and more impressed with the fact that industry, trade and transportation are almost completely interlocked. There cannot be prosperity for any length of time in one department without all feeling the same urge, or can depression fall on a single one without the others very soon feeling contraction. Such being the case, it is not too much to hope that when the railroads begin to find their way out of their cramped position, due to excessive costs and shortage of working capital, there will be reflection of that betterment in allied fields. Soon the crops will begin to come on the market in quantity—the growers will sell more rapidly this year than they did last year—and railroad traffic will show the result. The experience of the past indicates, also, that merchants and manufacturers will find benefit in the liquidation of what promise now to be satisfactory harvests.
