FINANCIAL NEWS AND COMMENT

Investment Bonds and Commodities Strong—Stocks Show Mixed Trends.

An irregularity of movement in stocks, strength in investment bonds and commodities and a narrow reaction in foreign exchange rates were the only features of yesterday's financial markets. Interest in the stock market was at a very low point, with total transactions far under a million shares. Buying of bonds was materially better than on any other day this week, however.

Those who make it a business to analyze market movements and to a certain extent to judge their trend admit they are puzzled by the action of bonds. Never has there been such a wide disparity in the opinions and predictions as to day. Up to a short time ago it was pretty generally agreed that the trend of the bond market was downward. Prices were high and with an increasing demand for seasonal crop operations as well as for the expansion of practically every other line of industry, there was every reason to believe that the bond market had for the moment at least seen its top.

Now, however, the averages of thirty bonds are nearly four points below their high point for the year and there are many who believe that the reaction has been sufficient to correct any variation in the line which marks the relationship of bonds to money.

On the other hand, it is not denied that the recent slump in the securities market left bond dealers with some rather important amounts of unsold issues in their vaults. Until this surplus has been absorbed it is doubtful if any substantial advance in the index of bond prices can be expected.

Special developments were at work in individual instances in the stock market yesterday which lifted some issues out of the slough of inactivity. Midvale Steel, for instance, was actively traded in, although within a narrow range, on the Bethlehem merger report which later was confirmed. At the same time there was more than the usual amount of interest in shares of the Standard Oil Company of New Jersey at constantly lower prices, and at one time the stock was more than sixty points lower than the high point at which it sold during the feverish speculation which the declaration of several stock dividends induced.

Heavy exports of cotton and an unexpected report of large takings by spinners resulted in a substantial upturn for that commodity. At the same time grain prices advanced substantially above the final figures of Thursday. Foreign exchange rates moved within a narrow range, but were unmistakably firm.

The expansion in retail and wholesale buying usual at this time of the year was reported in the weekly reviews of trade conditions. *Bradstreet's* sets forth that there is "little change in the aggregate of activities, trade as a whole being satisfactory." It adds, however, that there has been : "quite definite shifting of interest from primary lines to the jobbing and retail branches," responsibility for which is placed on "cooler weather in many Western districts, the growth in holiday buying and the advanced stage of the ordinary fall trade season."

The review explains the occurrence of the "peak car loading point two weeks' later this year than in 1920 by the "delay in the advent of fall trade activities due to the obstruction to normal business by the coal and railway shopmen's strikes."

RESERVE BOARD CRITICS ANSWERED BY BANKERS

Dr. Lockhart Sees No Merit in Changes Proposed.

Dr. Oliver C. Lockhart of the National Bank of Commerce, writing in the bank's publication, points out as unnecessary and undesirable the numerous proposals made to expand the scope of their operations. Asserting that their reserve and investment policies are being developed to obtain the greatest elasticity and stabilization of financial movements, he adds:

"While the adequate employment of reserve bank assets presents problems of grave importance, there is no solid reason for expanding the scope of eligible investment. Some extensions suggested are scarcely suited to a reserve system of commercial banking, nor do they seem essential to the maintenance of a proper balance of the American money market."

PORPHYRY COPPER REPORTS.

Four Companies Show Better Earnings in Third Quarter.

General improvement in the porphyry copper situation is indicated in the reports of the four companies for the quarter ended September 30 last, compared with the preceding three months.

Utah Copper showed a total income of $1,695,622, equivalent to $1.04 a share earned on the $16,244,900 ($10 par) stock, compared with $704,158, or 43 cents a share in the preceding quarter. Total income for the six months ended September 30, was $2,399,820, or $1.47 a share.

Ray reported a surplus of $57,800, equivalent to 4 cents a share earned on the $15,771,790 (par $10) capital stock, compared with a deficit of $247,867 in the previous quarter. Nevada showed a deficit for the three months ended September 30, of $124,278, compared with a deficit of $144,415 for the previous quarter. Chino reduced its deficit as of September 30 last, to $47,232, compared with a deficit of $126,121 in the preceding quarter.

UNION OIL DISSOLUTION.

Directors of the Union Oil Company of Delaware have voted a first dividend in dissolution in the form of 1½ shares of no par common stock of the Shell Union Oil Corporation for each share of Union Oil, payable December 22 to Union Oil stockholders of record December 4. Books close December 24 and reopen December 26. The dividend representing the distribution of the bulk of the assets of Union Oil of Delaware, probably will be followed at a later date by a small final dividend representing the proceeds of the remainder of the company's assets.

BUSINESS SATISFACTORY.

Continued satisfactory business conditions with a shifting of activity from primary to final distribution, featured the past week, according to the trade reviews made public here last night. Commenting on the general situation, Bradstreet's notes "little change in the aggregate of activities, trade as a whole being satisfactory, but a quite definite shifting of interest from primary lines of distribution to the jobbing and retail branches. For this, cooler weather in many western districts, the growth in holiday buying, and the advanced stage of the ordinary fall trade season, are mainly responsible."
