LAUSANNE'S DOINGS IGNORED ON BOURSE

Oil Stocks Alone Show Hesitancy—Preparations Made for Brussels Meeting.

Special Cable to THE NEW YORK HERALD.
Copyright, 1922, by THE NEW YORK HERALD.
New York Herald Bureau, Paris, Dec. 3.

The month end liquidations last week were met without the difficulty that was expected a fortnight ago, when it seemed evident that the Lausanne conference would affect the Bourse situation. Bourse officials explain the apparent lack of interest in Lausanne by pointing to the greater concern over the proposed Brussels conference, which already has caused precautions to be taken to strengthen Bourse positions generally by selling out lines subject to political fluctuations.

Unfortunately even such sound finance has a strange repercussion, for having noted the selling period the public seems to have cooled toward the markets generally. Not even rentes, Turkish metallurgical and railroad securities are attracting the usual volume of business despite the fact that only one big Credit Foncier issue is being offered to investors.

Oil stocks last week showed a persistent hesitancy, apparently reacting to the unencouraging reports from the United States as well as to the new tangle which is looming up at Lausanne over the Mosul oil fields. Rumanian oil stocks were dealt in early in the week, but even the hardiest speculators would not indulge in either Rumanian or Russian stocks until the situation is cleared up.

The banks, both French and foreign, remained firm throughout the week. The weekly statement of the Bank of France shows a new increase in note circulation of 325,000,000 francs.

BUSINESS NOTES AND TRADE NEWS

Retail Jewelers Look Forward to One of Best Holiday Seasons Since War.

The retail jewelry trade is entering its biggest selling season. Jewelers sell more merchandise in December than they do in six months in the year. The trade is in cheerful spirits and looks forward to one of the best holiday seasons since the war. The volume of sales already is growing. Medium and higher priced articles are reported to be selling more actively than formerly, reflecting improved general trade conditions. Bead and pearl necklaces, watches, clocks, silverware and precious and semi-precious stones are among the articlese moving actively at this time.

Dress Outlook Brighter.

The better value which farmers received for their products this year is having a good effect on the sale of dresses, according to David N. Mossessohn, executive director of the Associated Dress Industries of America. "The fact that the farm income next year will be even more favorable," he said, "brightens to the prospects for business in the dress industry for 1923. We can assume that each woman of the farm will purchase not less than one dress and many of them will buy two or more. If we set the average at one and a half dress, we can look forward to the sale of not less than 20,000,000 dresses to farmers' wives and daughters. With the increased income, the farmer now can set aside a sum for the things which were not considered necessities."

Funds for Chinese Silk.

The Chinese Government has increased the grant of money for the improvement of sericulture in China from 4,000 to 8,000 taels, according to the United States Testing Company, Inc. This will enable the International Committee for the Improvement of Sericulture in China to increase their production of disease free eggs. The committee now has seven sub-stations engaged in this work, one of which is located at Nanking University. The $21,000 building fund raised by the Silk Association of America for a sericultural building and equipment at Nanking University is going to furnish needed facilities and will enable the university to cooperate more extensively and effectively with the international committee.

Domestic Cotton Dull.

Although demand for domestic cotton goods quieted down perceptibly in the last several days prices remained steady. The recession in the gray goods market did not produce any noticeable weakening in values and sellers do not expect any decline as prices on their product have not risen in proportion with gray goods. A renewed demand for brown goods is anticipated by manufacturers. Many jobbers, according to reports, did not place the usually large initial orders for goods for next spring and they are expected to replenish their stocks within a few weeks. A large selling agent who is offering flannel shirts for 1923 reported that mills for the first time since 1920 are compelled to allot yardage of flannels to the cutter.

Lull in Future Buying.

Many retail merchants are placing orders for their immediate requirements at present prices, but the general tendency seems to be to hold off buying spring goods until the season opens up, according to H. T. Poindexter & Sons Merchandise Company of Kansas City. Despite the unusually warm weather prevailing in the middle West during the past week, the wholesale distribution of dry goods, furnishing goods and notions ran about 10 per cent. ahead of the same week a year ago. Demand for staples has been unusually good, as present prices range from 10 to 20 per cent. less than replacement values. Prices at the mills have become stabilized and no further advances are anticipated. Jobbing prices as a rule are considerably under replacement value, based on present mill quotations.
