Habitual Costiveness

causes disorganization of the entire system, and begets diseases that are hazardous to life. Persons of costive habit are subject to Headache, Defective Memory, Gloomy Forebodings, Nervousness, Fevers, Drowsiness, Irritable Temper and other symptoms, which make the sufferer for business or agreeable associations. Regular habit of body alone can correct these evils, and nothing succeeds so well in achieving this condition as Tutt's Pills. By their use not only is the system renovated, but in consequence of the harmonious changes thus created, there follows a feeling of satisfaction; the mental faculties perform their functions with vivacity, and there is an exhilaration of mind and body, and perfect heart's ease that bespeaks the full enjoyment of health.

Tutt's Liver Pills

REGULATE THE BOWELS.

DISEASES OF CHICKENS

Treated the following testimonial from people who have used VICTORY FOR LIVER FOOD, for Chicken Cholera, Roupe and other diseases in their fowls:

"In the fullness of our experience with Chicken Cholera, we feel in justice to my fellow-citizens, to inform them of the efficacy of your Victory Liver Food. Some thirty-odd of our best and most valuable chickens had died with the cholera, and nearly all the balance were almost demoralized of their flesh. The disease was not confined to our chickens only, but the turkeys died, and they went in the same way. Every preventive was used, and we have had recourse to POLK MILLER'S CHICKEN FOOD, which we used, and we have had no more cholera, never losing a fowl, results greatly to the fowls' liking, and I HAVE NEVER SEEN A CASE OF GAPES in my young chickens when it was used. We would as soon die without salt in our food as to undertake to raise fowls without POLK MILLER'S CHICKEN FOOD.

WILLIS W. BUBOY,
Powhatan county, Va.

As an evidence of our valuation of the VICTORY FOR LIVER FOOD, I will simply state that we are never without it in our kitchen. We buy by the dozen cans, and when my wife has a sick fowl we make it a point for these Powders," and [illegible] of it. It is an infallible remedy with us. I have used it also with equal success in Hog Cholera, and have never lost a hog since I commenced using it. Before I lost a great many.

WILLIAM A. WILLBOY,
King William county, Va.

Sold by druggists and grocers at 25 cents, or by mail on receipt of price.

POLK MILLER & CO., Richmond, Va.

ABC AMERICAN BLOOD CURE

3 PREPARATIONS
ABC ALTERATIVE
ABC TONIC
ABC EXPECTORANT

Consumption.

Mr. JOHN JOHNSON, 22 St. James st., Richmond, Va., writes:

Last fall I was attacked with hemorrhage from the lungs, soon followed by a hacking cough, loss of breath, great exertion, loss of appetite, and profuse night sweats. I grew very rapidly under medical treatment, and my case seemed hopeless. A friend recommended to me A. B. C. Tonic and Expectorant, and did so in spite of my prejudice against patent medicines. The medicine was administered by the A. C. C. Tonic since that time my cough soon left me, and I attribute the use of the Expectorant, and am now in good health, and as I have not spoken other remedy than the A. B. C. Tonic and Expectorant owe my recovery entirely to them.

Red Blood.

MR. F. W. MARABLE, 817 N. 17th street, Richmond, Va., writes:

I have used "A. B. C. Alterative" with marked benefit to myself, and take pleasure in recommending it to any one suffering from impure blood, weakness and those on the market. That it will invigorate the digestive organs, improve the appetite, and is a never-failing remedy for blood diseases I firmly believe.

SOLD BY ALL DRUGGISTS.

Treatise on blood and skin diseases free by mail.

A. B. C. CHEMICAL CO.,

THE APRIL HEAVENS.

What Wm. Maxwell Reed Has to Say of the Stars and Planets.

Our sun, as we already know, is in the midst of a great cloud of stars. Which-ever way we look we see as far as the eye can reach an endless number of points of light. We should expect that in some cases two stars would appear very close, although in reality they might be a great way apart. We might even look for eclipses among the stars. There are thousands of just such case, called by astronomers double stars.

While Herschel was carrying on a series of measurements on double stars he found that the components of many were moving through space with the same velocity and in the same direction. Such a movement would certainly indicate that they had some bond of union. For what are the chances of these stars having the same velocity by accident? A little later, by studying his observations more carefully, it was found that one star actually revolved about the other in an oval orbit. Since then many double stars have been seen to make one entire revolution. So that it is now proved beyond all doubt that there are systems which consist of more than one sun.

At first sight it might seem very easy to ascertain this period by simply watching the components until they have made one revolution. In the great majority of cases, however, it would require many lifetimes of patient watching before the period could be ascertained. Most people like to get some immediate result from their work. Hence mathematics is resorted to. When the dimensions of an orbit are known and the star has been followed a comparatively short time, the period of revolution can be computed. A period found in this way, however, is not thoroughly trustworthy on account of the uncertainty of the observations. When we recall the fact that these stars appear so close together that to anything but a telescope the great majority of them look like single stars, it is easy to realize the difficulty of making accurate observations. The angle which the two components of Castor, a bright star in the constellation of the Twins, subtend is the same that a stick, one inch long, would if it were one mile off. That is, the two stars appear as far apart as two dots, an inch apart, would if they were a mile away. The orbit described by the two components of Zeta Cancri might be represented by a penny, a mile from us. In this case, we are not looking straight upon the orbit, but very much from one side, so that the penny should be turned to give the appearance of a very narrow oval. These two stars take about 60 years to make one revolution. There is a third star, a little way from these, that moves in the same direction and revolves around the first two in five hundred years. If one looks at Vega, the brightest star in the constellation of Lyra, one will see toward the west two fifth-magnitude stars that form, together with Vega, an equilateral triangle. Each side of the triangle is about four diameters of the moon. One of the faint stars is double, and the two components can easily be distinguished by the naked eye. Which star is double we will leave for each observer to find out for himself, for the object is rather a good test for the clearness of one's vision. Most tests, such as the number of stars one can see in the Pleiades, show only the penetrating power of the eye. When this double star is examined through a telescope each component is found to be in its turn a double star. Each pair has a period of about two hundred years, while the pairs revolve around some common centre of attraction in many millions of years. One of the most beautiful double stars is Beta Cygni. The larger star, of the third magnitude, is of a bright golden color, while the fainter one, of the seventh magnitude, is green or blue.

There is a very curious relation between the colors of a double star that is not at all understood, and, in fact, it is doubted by some whether it exists or not. It is that the colors of the secondary star is further toward the violet end of the spectrum than that of the principal star. Accordingly, if the brighter is red or yellow, the fainter star will be green or blue.

A very interesting discovery of a double star has lately been made at the Cambridge Observatory by means of the spectroscope. The lines in the spectrum of a certain star are found to vary in width. Now let us see how the observation of such a fact can lead to the discovery of a double star. If the plane of the orbit of a double star lies very nearly in the line of sight—that is, if the penny above referred to appears to us as a straight line—one of the components would be approaching as while the other is receding. By laws given in the last article the lines in the spectrum of the former would move toward the violet and those in the spectrum of the latter toward the red. Now if these are so far off that even through a telescope they appear as a single star, the spectrum, of course, would have only one set of lines. But these dark bands would tend to widen or narrow periodically as first one star and then another is approaching or receding. The period is very uncertain on account of the difficulty of measuring such extremely minute quantities.

It would be interesting if by some similar method we could discover the cause of variable stars, especially those of the Algol class. As explained in the article for last July, variables of this class remain for days perfectly constant in brightness, then, in a few hours, they will decrease to the magnitude of a comparatively faint star and return again to their former brilliancy. The almost perfect regularity of these stars makes it possible for their variability to be due to a dark planet revolving around the star and once in every revolution intercepting part of the light. Some of these variables grow so excessively faint that either the planet must be a great way from the star or very large and near. In many stars, however, we have another condition, that the period is very short. Hence with such stars the planet must, in all probability, be near the primary. For even the small orbit it would then have would require a velocity unknown in the solar system. Another interesting example of a double star, when one of the components is almost non-luminous, is Sirius. For some time it had been noticed that Sirius did not move in a perfectly straight line through space, but had a slight wabbling motion. It was suspected that irregularities were caused by the attraction of a companion, which, as it revolved around Sirius, pulled it first to one side and then to the other. The orbit and period of this invisible star were computed, so that one could predict for any given time where it would be. When Mr. Alvan Clark was testing his new 30-inch telescope he found this companion in exactly the place it was supposed to occupy.

Can life, as it is known to us, exist in such systems as these? If it does, what remarkable phenomena the inhabitants witness. First, a red sun might rise, cross their heavens and set. Then, without giving them time for sleep, a yellow sun, accompanied by a green or blue attendant, would appear. We can picture to ourselves indefinitely the wonderful effect these colors would have on the foliage and atmosphere. When we think, however, of the tremendous changes in temperature, such a planet would undergo, where so many suns are contending for its possession, we are compelled to conclude that the question must have a negative answer. And yet we must not be too hasty in taking the next step—that life, then, does not exist there at all. For it would be perfectly possible that there may be beings superior to ourselves and yet entirely different. In fact, if life is an element of the universe, as perhaps matter and motion are, then would it not adapt itself to its surroundings, let them be what they may? Such certainly would be the case if the belief of the Brahmins be true.

The variables, given to those who responded to the appeal for more observers of such stars, have now become difficult to observe, owing to their position. If the observers will send me their original observations, I shall be glad to reduce them, and, if the results are trustworthy, publish them. Address 59 Thayer Hall, Harvard University, Cambridge, Mass.

Venus is evening star this month. It sets later every month.

Mars rises about 10 o'clock in the evening.

Saturn also is visible during the evening. It sets about two o'clock in the morning.

Jupiter will be a morning star during this month.

Mercury may be seen toward the end of the month in the west soon after sunset.—Boston Journal.

Oh, What a Cough.

Will you heed the warning—the signal, perhaps, of the sure approach of that more terrible disease, Consumption? Ask yourselves if you can afford for the sake of saving 50 cents, to run the risk and do nothing for it. We know from experience that Shiloh's Cure will cure your Cough. It never fails. This explains why more than a Million of Bottles were sold the past year. It relieves Croup and Whooping Cough at once. Mothers, do not be without it. Sample bottles free. Sold by Bodeker Brothers and H. M. Shields & Co., corner of Fifth and Marshall streets.

Don't

neglect that cough, but take at once Dr. David's Cough Syrup of Pure Pine Tar, Horehound and Wild Cherry.

Dyspepsia and Liver Complaint.

Is it not worth the small price of 75 cents to free yourself of every symptom of these distressing complaints? If you think so, call at our store and get a bottle of Shiloh's Vitalizer. Every bottle has a printed guarantee on it. Use accordingly, and if it does you no good it will cost you nothing. Sold by Bodeker Brothers and H. M. Shields & Co., corner of Fifth and Marshall streets.

TOBACCO DEPARTMENT.

RICHMOND, VA., April 4.—Sales of loose tobaccos on the breaks to-day: 3,050 pounds; highest price, $4.60. This constitutes all that was sold for the week ending Friday, April 4, 1890.

Private sales reported to the secretary to-day: Wrappers, 24 hogsheads; fillers, 12 hogsheads; cutters, 45 hogsheads; smokers, 26 hogsheads; sun-cured, 2 hogsheads; dark tobaccos, 10 hogsheads. Total, 119 hogsheads.

Office of the tobacco inspector reports to-day: Inspections, bright, 27 hogsheads; dark, 24 hogsheads; western 25 hogsheads. Reinspections, bright, 24 hogsheads; dark, 19 hogsheads.

Farmer's, Wilson's, Alleghany, Old Dominion, Crenshaw's, Davenport's, Centre, and Seabrook's Warehouses report to-day: Receipts, 52 hogsheads; deliveries, 42 hogsheads.

Office of the collector of the United States internal revenue reports collections for the city of Richmond to-day as follows: Tax paid, cigars and cigarettes, $240.50; tax paid tobaccos, $2,659.80; total, $2,871.10.

Our Mr. Charles Watkins left for Savannah, Ga., last night on a business trip.

Registered at the Tobacco Exchange to-day: S. Higham, T. A. Bimis, Madison, Wis.; W. A. B. McComb, Louisa; A. O. Bell, Fluvanna.

The Richmond tobacco market was active to-day, with good sales of bright wrappers, fillers, cutters and smokers. Inspections moderately large. Receipts and deliveries light. Received collections fair. C. McL.

Grain and Cotton Exchange.

RICHMOND, VA., April 4, 1890.

1103 Main St., Richmond, Va.

ap5-2t

Bedford City Land and Improvement Co.

Capital Authorized, $1,000,000.

This company owns and controls 600 acres of land situated in the western portion of the town, which is the most available part of the city for residences and manufactories.

ADVANTAGES OF THIS CITY.

It lies on the Norfolk and Western Railroad, and on the surveyed route of the Pittsburg and Atlanta Railroad, which will be one of the greatest trunk lines in the United States. It is at the gate of the great Southwest, and situated at the foot of the Peaks of Otter Mountains, and from which it gets its unlimited supply of

PURE AND WHOLESOME WATER.

MANUFACTORIES: Berry Bros. Plug Tobacco—This is the best equipped factory in the state and its output the largest in the sixth district (which includes Lynchburg and Danville.) Bowling, Wright & Co., smoking Tobacco—is the largest manufacturers in their line in this district. The Liberty Woolen Manufacturing Company—The best equipped woolen mills in the state of Virginia, working principally on government contracts. Profits for seven months in 1889, $11,000 (see report of directors). Besides this, there are eleven other tobacconists in the town doing a large and profitable business, two steam flouring mills, four cigar factories, two planing mills, one foundry and plow works, and one box factory.

MANUFACTORIES PROJECTED: Brossius Steel and Iron Manufacturing Company, capital stock $500,000. Broom factory, capital $10,000; machinery ordered, and will be in operation at an early day. Ice factory, capital $125,000; machinery ordered. Furniture factory, Carriage and Wagon Works, Mattress factory. E. W. Coffee Machine Company, capital $1,000,000—This company owns one of the most valuable patents in connection with the manufacture of tobacco in the world, and will soon erect buildings to manufacture these machines, giving employment to two hundred hands. This alone will make this a great city. The stock books of the company are open; a limited amount of the stock offered at fifty cents on the dollar.

This is a good investment; safe and sure.

A Scientific and Honest Medicine for the Millions!

Dr. King's Royal Germetuer!

CURES WHEN ALL ELSE FAILS.

Thousands of men women and children throughout the United States have used it, and are loud in their praise of it. They were afflicted with many diseases some considered incurable. Some have been cured after suffering twenty-five and thirty years.

HOTEL HAY, HOT SPRINGS, ARK., Sep. 4, '89.

I have been taking Dr. King's Germetuer with great benefit. I have been quite a dyspeptic, suffering more or less from indigestion for a great many years. But now my digestion is nearly normal. The oppression at my stomach (after eating) with which I have been annoyed so long, has nearly entirely disappeared. I find great benefit to my kidneys also, my back being greatly strengthened. C. D. HAY.

Dr. C. D. Hay is the proprietor of the Hay Hotel, one of the leading hotels of Hot Springs, and many years ago was a prominent physician of Franklin, Tenn. After that he traveled and lectured extensively on medicine and electricity.

In testimony to the great value of Dr. King's wonderful Royal Germetuer, allow me to say the bottle I bought for my patient did its work well. She was prostrated with chronic vaginitis, with sympathetic affection of the kidneys. I believe it will effect a permanent cure, and I heartily recommend it.

Respectfully, J. A. MORRIS, M. D.

Waco, Texas.

CHESAPEAKE AND OHIO RAILWAY, AYTON, VA., June 24, 1889.

For some years I have been troubled with a torpid condition of the liver. I had frequent headaches, feeling of extreme lassitude, no appetite, blood in a very impure condition—so much so that only a slight abrasion of the skin would develop into sores. Was losing flesh rapidly. I used different tonics and cathartics, but nothing seemed to do me any good. I was induced about three weeks ago to try a bottle of Germetuer, a new medicine. In a few days I noted a decided improvement in my feelings, and now, though I have just commenced my second bottle, I find all of my unpleasant symptoms gone, am rapidly gaining flesh, appetite perfect, and am in better general health than I have been for years. The effect of Germetuer upon myself was so beneficial, I induced my wife, who for years has been a sufferer from sick headaches, to try it. She has not had a headache since she commenced its use, and her general health, which was run down, is rapidly improving, and she says she has not felt so well for ten years. I have just commenced its use with my little son who is afflicted with epilepsy, and I already note the most beneficial results, and feel satisfied that its continued use will entirely cure him. SAMUEL SHEPHERD.

ATLANTA, GA., January 2, 1890.

Six months ago, at the request of a friend who was interested in the sale of King's Royal Germetuer, I made a written statement of the benefits I had received from the use of that medicine. In that statement I expressed the belief that it would cure me entirely of Catarrh. Within the last two months I have received letters from every quarter of the nation calling on me for further information in regard to my health. It has been impossible for me to write privately to each person who has made this request, and I am therefore under the necessity of making another public statement.

I am free from catarrh. I believe that I could get a certificate to this effect from any competent physician. I have used no medicine within the last six months except King's Royal Germetuer. My health is better than it has been in thirty years. I am in possession of information which warrants me in saying that the relief which I have experienced from the use of the medicine is not more certain and radical than that which it has brought to hundreds of persons in Georgia and other States. J. H. HAWTHORNE.

OFFICE OF THE COLLECTOR OF CITY TAXES, CITY HALL, RICHMOND, VA., June 20, 1889.

I take pleasure in saying that I have been very much benefited by the use of Dr. King's Royal Germetuer. For the past ten years I have suffered from a very severe catarrhal affection, and despaired of getting relief, but hope dawns, now that I can see the good effects of the Germetuer. I am now using the second bottle, and am improving very much. I cordially recommend Dr. C. R. King's Royal Germetuer to all who are suffering from catarrh. F. W. CUNNINGHAM,
Collector of Taxes for Richmond.

OFFICE OF THE COLLECTOR OF CITY TAXES, CITY HALL, RICHMOND, VA., June 21, 1889.

Having used Dr. King's Royal Germetuer in my family for the past few weeks for catarrhal affection and rheumatism, I take pleasure in saying that it has proved beneficial, and I cheerfully recommend it to my friends. E. A. BARBER.
